

EDUCATION

University of North Texas Expected. May 2025
Masters in Computer Science (GPA - 4 / 4)
Relevant Course Work: Machine Learning, Computer algorithms, Database systems

Malla Reddy Engineering College for Women Aug 2020
Bachelors in Information Technology (CGPA – 8.43/10)
Relevant Course Work: Design and Analysis of Algorithms, Python, Web Development, Object Oriented Programming

TECHNICAL SKILLS

Programming Language: Java, Python, C, C++
Web Technologies: HTML 5, CSS 3, JavaScript
Database Management: Oracle, MySQL, No SQL(Mongo DB)
CI/CD: Jenkins, Docker, Kubernetes, SonarQube
Framework/Libraries: Spring Boot, Spring MVC
Skills: GIT, AWS, JIRA, Machine Learning

EXPERIENCE

Associate Software Engineer, Accenture Solutions Pvt Ltd, Hyderabad, INDIA Dec 2021 – Dec 2022

- Setup the clean CI/CD pipeline with best practices using **Jenkins** to automate the build and test of different applications built using Nodejs and Spring boot to reduce deployment time by 50%.
- Created **Docker** images and deployed them into **Kubernetes** clusters in cloud using YAML files as part of Jenkins pipeline by reducing the server crash by 20%.
- Introduced **SonarQube** as a part of CI/CD for static analysis and helped in improving code quality by 30%.

Sutherland Intern, Hyderabad, INDIA Aug 2021 – Nov 2021

- Worked as a call executive, handling the issues raised by the US clients based on the bank related queries.

ACADEMIC PROJECTS

Movie Producer Management System(application)

- The Movie Producer Management System is an application that is being developed for a movie production company like Universal Studios.
- The system is designed to store and manage information about the company's movies, artists, songs, employees, and various other aspects of the movie production process.
- The system will store information about the producing site locations, movie-script-inventory, sponsoring companies, employee data, and payroll.
- It will also store information about the artists and the movies they have worked on, as well as the various aspects of the movie production process, such as soundtracks, awards, and more.

Medical Image Analysis using Deep Learning

- The main idea of this project is to detect the disease that is present in a human body while a person is suffering with disease.
- This is done through Deep Learning/AI technology where it takes previous images input, and it compares with the person's diseased body parts.
- With this technology we will get accurate results and then it will be helpful in saving many lives.

ACHIEVEMENTS

- Participated in Safe women Hackathon conducted by J-HUB, JNTUH.
- Certificate of merit – Oxford Achiever.
- NxtWave CCBP4.0 Tech online Boot-camp
- Paper Presentation: Awarded “First Price”.

Workshops Attended:

- “Things Conference India” by IB Hubs.
- IB Hubs boot camp on IOT
