PROFESSIONAL SUMMARY

Experienced Software Engineer with a master's degree in computer science and expertise in **designing and maintaining scalable, high-performance platforms**. Proficient in **Python, C#, C++, JavaScript, SQL, Linux, and Docker**. Experienced in designing and building **microservices architecture**. Proven ability to optimize **system performance, enhance security**, and drive efficiency through **automation**. Adept at **cross-functional collaboration** and **problem-solving** in dynamic environments.

EDUCATION

Master of Science in Computer Science

Arizona State University | GPA: 3.73/4.0

Aug 2022 - May 2024

Tempe, AZ

Relevant Coursework: Distributed Software Development, Software Testing

Bachelor of Technology in Computer Engineering

Vellore Institute of Technology (VIT University) | GPA: 3.6/4.0

Jul 2016 - Jul 2020

Vellore, India

Relevant Coursework: Data Structures and Algorithms, Statistics, Computer Networks

WORK EXPERIENCE

Goldman Sachs (via InRhythm)

Software Development Engineer

Salt Lake City, Utah

Sept 2024 - Present

- Working in the risk remediation team.

WUD (via Epics at ASU)

Software Development Engineer

Dallas, Texas

Jun 2024 – Sept 2024

- Spearheaded the implementation of core features such as **user feedback sections, event registration, emailing** functionality by employing the **Django framework** and **REST APIs** to access the features.
- Integrated **Spotify** access into the application, enabling seamless music streaming and playlist management functionalities, enhancing user engagement and experience.
- Collaborated closely with **stakeholders** to gather **requirements** and ensure product alignment, was actively involved in the **product design** and **microservices architecture design**.

Fortinet Technologies

Software Development Engineer

Bengaluru, India

Nov 2020 – Jun 2022

- Developed and optimized** a comprehensive provisioning, management, and reporting system, cutting access time by 15%.
- Enhanced **backend performance** by 25% through advanced **Python** features and **FastAPI** framework, leveraging **SQLite** and **SQLAlchemy** ORM for managing the Database interactions.
- Strengthened **security** with **OAuth-based authentication** by incorporating Google, Facebook and Twitter Login.
- Boosted operational efficiency** by 30% through strategic migration from **PHP to Python**.
- Engineered **scalable microservices** using **Docker for containerization**, improving system robustness and deployment efficiency.
- Optimized **application performance** by **profiling and debugging** PHP code using **Xdebug** to identify bottlenecks caused by extensive logging, then implemented asynchronous logging in the Python-based system, resulting in improved application speed and efficiency.
- Implemented **Redis for caching**, significantly reducing database load and improving data retrieval times.
- Conducted **comprehensive unit tests** using **pytest**, achieving 95% **code coverage** and ensuring robust, reliable **software performance**.
- Integrated **FreeRADIUS** authentication on **Linux/Unix environments** to manage network access, demonstrating proficiency in **TCP/IP stack**, thereby enhancing network security and access control efficiency.

Samsung Semiconductor

Software Development Intern

Bengaluru, India

Jan 2020 – Jul 2020

- Optimized code coverage** with **coverage.py**, boosting **test coverage** by 20% and identifying critical testing gaps.
- Automated RTL data entry tasks** with advanced **Python scripts**, improving efficiency by 20%.

Vodafone

Software Development Intern

Hyderabad, India

May 2018 – Jul 2018

- Engineered and deployed a **Machine Learning** model using **Ensemble Methods** to identify primary reasons for call drops and determine correlations with factors such as location, time, and signal strength.
- Performed extensive **data cleansing** and preprocessing using Python libraries such as **Pandas** and **Numpy**, ensuring data integrity and reliability.
- Achieved a final **accuracy of 87%** with the ML model, significantly improving predictive capabilities and operational decision-making.

SKILLS

Web Development: Node.js, TCP/IP, UDP, MVC, React.js, Debugging, Design Patterns, ASP.NET, **Flask**, REST, JSON, jQuery, Database Management, HTTP, FastAPI, UNIX, ETL, **Django**.

Tools and Frameworks: Visual Studio Code, Git/GitHub, GitLab, Linux, Agile, Microsoft Office Suite, Docker, Postman, Jupyter Notebook, Eclipse, Version Control, Amazon Web Services (AWS), Pandas, NumPy, Slack, Bash.

Management: Critical Thinking, Organization Skills, People Management, Communication Skills, Problem-solving, Software Development Lifecycle (SDLC), Scrum, Interpersonal Skills.

Languages: Python, C++, C, C#, JavaScript, HTML, CSS3, SQL.

Big Data Management & Analytics: MSSQL, MySQL, RDBMS, NoSQL (MongoDB), Machine Learning.

PERSONAL PROJECTS

STOCK SCREENER

May 2023

- Engineered a **robust, scalable Stock Screener application** utilizing **Node.js** for backend operations, **HTML, CSS, Bootstrap** for frontend and **MongoDB** for efficient data storage, ensuring seamless and reliable performance.
- Integrated advanced **REST APIs** to fetch **real-time** stock data from leading **financial markets**, incorporating bespoke features for active traders, such as a customizable watch list and a personal note system.

E-BUSINESS TICKET BLOCK BOOKING SYSTEM

Nov 2022

- Engineered a **Multi-Threaded** E-Business System using **C#** and **.NET** for booking cruise tickets in bulk, simulating real-time transactions between multiple ticket agents and cruise lines.
- Implemented **Event-Driven Programming** to dynamically update ticket prices with a custom pricing model, emitting price-drop events to subscribed ticket agents.
- Designed a Multi Cell Buffer for **Concurrent** Order Processing, ensuring thread safety and efficient communication between ticket agents and cruise servers, using **semaphores** and **synchronization mechanisms** to handle up to 100 simultaneous orders.
