Java Developer

PROFESSIONAL SUMMARY:

5 years of experience as a Java Developer, I have extensive experience across the entire software development lifecycle, including Analysis, Design, Development, Implementation, Testing, and Deployment.

- Has expertise in Core Java, Web and Enterprise application Development using Java/J2EE.
- Very good understanding of implementing Object-oriented design principles and design patterns.
- Areas of expertise include Development, Business requirement understanding & configuration, working on Technical Solutions.
- Extensive development experience in web applications using Java 8/7/6, J2EE, JSP, Spring and API's like JDBC, XML, JavaBeans.
- Strong application integration experience using ActiveMQ, JMS.
- Implemented Dependency Injection (IOC) using Spring framework to inject dependency into objects.
- Expertise in implementing various well-known Object-Oriented/J2EE Design Patterns and Session, Entity, Message Driven Enterprise Java Beans (EJB).
- Implemented J2EE design patterns- Singleton, Abstract Factory, Factory, Builder Pattern
- Experience in writing SQL queries, Stored Procedures, Functions and Triggers.
- Experience in working with database tools such as SQL Developer and MySQL Workbench.
- Good working knowledge of databases like Oracle and MySQL.
- Used Git as a version controlling for the source code commits and updates.
- Good experience on creating and consuming of REST and SOAP based Web Services.
- Used JUnit as a unit-testing framework to write test cases as a part of the test-driven development (TDD) and Jenkins for continuous Integration (CI).
- Utilized Java 8 features like Lambda expressions and Stream API for Bulk data operations on Collections which would increase the performance of the Application.
- Good experience in FlexPLM Business requirement customization, Lifecycle, Workflow, Client and server-side validations, Data Utilities.
- Decent knowledge on PLM concepts, Compliance applications and worked in Windchill 11.1/12.0.2.
- Experience in Windchill Implementation and Business Administration.
- Exposure in Windchill Customization (Validation framework, creating validators, creating filters, Actions frameworks, Form Processor, Data Utilities, OIR, Remote Utility, Rest APIs, Workflows, etc.).

WORK EXPERIENCE: -

Client: UBS Financials, Weehawken, NJ
From August 2024- Till date
Role: Java developer

Project title: Scalable Microservices Architecture and Cloud-Enabled Financial Solutions

Project Description: Led the development of cloud-native, event-driven microservices for financial platforms using enterprise technologies including Java 17, Spring Boot, and ReactJS, deployed entirely on Microsoft Azure. Architected scalable, secure, and high-performing solutions with integrations involving Kafka, Redis, OAuth2, and containerization using Docker and Kubernetes. Enhanced CI/CD automation through Azure DevOps, supporting a robust TDD pipeline. Collaborated cross-functionally to modernize legacy systems, integrate backend APIs developed in Node.js, and

improve the overall maintainability, observability, and usability of the platform.

Responsibilities:

- Designed and implemented scalable, event-driven microservices using Java 17, Spring Boot, and Hibernate for cloud-native applications on Azure.
- Developed reusable UI components using ReactJS, Redux, React Hooks, HTML5, and CSS3, optimizing cross-browser compatibility and responsiveness.
- Integrated OAuth 2.0 and JWT-based security with external IAM platforms (e.g., ForgeRock, Okta) to enable centralized identity and access control.
- Used Spring Data JPA with Hibernate to simplify database access layers and enhance data consistency.
- Developed UI features in alignment with UI/UX design principles and WCAG standards, collaborating closely with designers for seamless user experiences.
- Built and maintained RESTful APIs and GraphQL services, optimizing client-server communication and reducing over-fetching of data.
- Integrated Node.js services for asynchronous processing and enhanced backend interoperability using Express.
- Designed and implemented CIAM-compliant user workflows including secure user registration, login, password reset, and token/session lifecycle management.
- Designed secure authentication flows using OAuth 2.0 and JWT, ensuring compliance with enterprise security standards and supporting fine-grained access control.
- Engineered distributed caching strategies with Redis, significantly reducing database load and improving application performance.
- Created and optimized complex SQL queries, stored procedures, and triggers for PostgreSQL, MySQL, and Oracle DB to support financial reporting and analytics.
- Developed and deployed containerized services using Docker and managed configurations via Azure Kubernetes Service (AKS) and Azure CLI, enabling dynamic scaling.
- Automated infrastructure provisioning and application deployment using Azure DevOps, Jenkins, and Maven for faster, more reliable releases.
- Implemented blue-green and canary deployment strategies, enabling zero-downtime production releases.
- Led code reviews, mentored junior developers, and established front-end architectural best practices for long-term scalability.
- Integrated centralized logging and monitoring solutions using ELK Stack and Dynatrace, enhancing observability and system diagnostics.
- Developed unit and integration tests using JUnit, Mockito, Selenium, and Cypress to ensure high-quality and robust code.
- Wrote Unix shell scripts for automating deployment and infrastructure-related tasks.
- Developed PL/SQL procedures and queries on Oracle 12c/19c, supporting complex transaction workflows and reporting.
- Designed and generated financial and operational reports using JasperReports integrated with Spring Boot applications.
- Collaborated effectively with cross-functional teams including architects, DevOps engineers, and product managers to ensure alignment with business goals.
- Applied leadership and mentorship skills to guide developers toward on-time, high-quality releases and foster a collaborative team environment.

Environment: Java 17, Spring Boot, Spring MVC, Hibernate, REST API, GraphQL, ReactJS, Redux, HTML5, CSS3, JavaScript, TypeScript, Node.js, Express, Azure (AKS, App Services, Blob Storage, Azure DevOps, Spring Data, PostgreSQL, Key Vault), Kafka, Redis, MongoDB, JBoss, MySQL, OAuth 2.0, JWT,

ForgeRock, Okta, Docker, Kubernetes, Jenkins, Maven, Oracle 12c/19c, JUnit, Mockito, Selenium, Cypress, ELK, Dynatrace, Swagger, Git, Unix Scripting, Agile (Scrum), Log4j.

Role: Java Developer

Client: JPMORGAN CHASE & CO (NYC, NY)

From: Feb 2023- July 2024

PROJECT: Consumer Community Banking (MYHOME-Mortgage Banking (Mortgage Experience (Explore | Buy | Manage))

DESCRIPTION:

The Mortgage Pipeline Application offers a user-friendly interface, facilitating lead exploration, purchase decisions, and ongoing management for consumers. It incorporates automation for the loan application process, reducing the need for human intervention and enhancing overall operational efficiency. The application's integration with Docker allows for containerization of different tools, ensuring seamless development, integration and delivery. The applications' real-time communication between microservices and downstream systems, facilitated by Kafka, enables quick and accurate decision-making throughout the mortgage pipeline.

Responsibilities:

- I specialize in architecting and building microservices for each crucial stage of mortgage processing. I have leveraged microservices and event-driven architecture to enhance the efficiency and reliability of mortgage pipelines.
- Worked closely with project managers and architects to understand project requirements and goals, assist in project planning, estimations and resource allocation.
- Integrated modern API gateways and routing mechanisms to progressively divert traffic from legacy services to new microservices.
- Lead and guide the development team, providing mentorship and support to team members.
- Participating in regular code reviews to ensure code quality, adherence to coding standards and best practices.
- Automating the loan application process by developing solutions using Java Spring Boot and Microservices design thereby reducing the need for human intervention.
- POC implementation of standalone Lender Price Analysis to find eligible loan options for customers.
- Worked on Integrating Kafka as a messaging and streaming platform to enable real-time communication between micro services and downstream systems (MAX & HLCC) for further processing's of a Mortgage Applications.
- Integration with AFL (Grant Services with EBM) to show discounts to users on property also Integration with Third Party vendors like Lender Price to fetch property rates.
- Implemented Affordability calculator that helps determines how much they can afford to spend On a mortgage based various factors such as Credit score(fico), DTI (Debt to Income Ratio), Income and other factors.
- I have extensively utilized technologies such as Spring Boot, Spring Cloud, Oracle, and Kafka to implement these microservices. Additionally, I have leveraged the power of Java and AWS to ensure the scalability, security, and reliability of the microservices ecosystem.
- Enhanced Mortgage lender - The decision table considers the applicant's credit score, income, debt-to-income ratio, and property value to make a recommendation on whether to approve the loan.
- Collaborating with product manager and cross-functional teams to fix & improve products and automating tasks through appropriate tools & scripting.
- Documenting development phases & monitoring systems and ensuring software is up to date with the latest technologies.

- Engaging with product team and working on the new enhancement, feasibility & proposing solutions by problem definition, requirements, cross-team impacts etc.
- Participate in refinement sessions and work on the requirements. Work on JIRA backlog, creating stories for the epic, coordinating with team and transitioning knowledge on requirements and technical design etc.
- Analyze performance metrics for services/APIs. Monitor performance using Splunk, Dynatrace and troubleshoot issues.

Company: Tata Consultancy Services (Pune, India)

Role: Java Developer

From June 2020 – Nov 2022

Project Name: BARCLAY CARD UK

Project: Barclay Card UK – Payment processing and bank integrations.

Technologies: Java, Java 8, Spring boot, Spring MVC, Struts, Microservices, Rest API, Postgres, JPA, Junit, GIT, RabbitMQ, AWS ELK, Jenkins, AWS, Docker, Kubernetes, Jira, Gradle.

Responsibilities:

- Led the migration of a legacy monolithic Barclays card application built on Struts to a modern, scalable Java Spring Boot microservices architecture.
- Developed microservices using Java 8, Spring boot leveraging lambda expressions, and Stream API to write cleaner, more efficient, and readable code.
- Applied Java Collections Framework effectively to manage complex data structures and improve application performance through optimal use of Lists, Maps, Sets, and Queues.
- Designed and developed modular microservices following the CQRS (Command Query Responsibility Segregation) pattern to separate read and write responsibilities, improving scalability and maintainability.
- Built secure and performant RESTful APIs, ensuring proper data validation, structured error handling, and compliance with security standards.
- Wrote comprehensive unit test cases using JUnit, ensuring high test coverage, code quality, and minimal regression across microservices.
- Managed PostgreSQL database integration, handling schema design, query optimization, and separation of command/read models in line with CQRS principles.
- Integrated Hystrix for circuit breaker implementation, ensuring system resilience by gracefully handling service failures and timeouts.
- Used Kafka as message broker in service.
- Participated in DevOps practices by containerizing services using Docker and implementing automated build and deployment pipelines using Jenkins.
- Deployed microservices to AWS cloud, managing configuration, service discovery, and scaling through infrastructure-as-code.
- Ensured application stability and compliance by adhering to established recovery, rollback, and resolution standards for production incidents.
- Actively collaborated in Agile ceremonies including sprint planning, estimation, retrospectives, and daily stand- ups, ensuring timely delivery and visibility of project progress

EDUCATION

- **Master of Science:** Engineering Management, Information Systems, Indiana Tech - IN, USA
- **Bachelor of commerce BCom:** Computers, Bhavans New Science Degree College, India
