- Supported event planning through data visualizations and campaign performance reports

Data Science Researcher

June 2022- January 2023

IBM Skills Network | Sacramento, CA

- Constructing machine learning models, learning Python and SQL
- Developing data analysis and visualization skills, using Tableau and R Studio

ACTIVITIES

Macronutrient Recipe Tracker Python, Jekyll

San Diego, CA

Software Developer

- Given a database of recipes, used a pipeline to differentiate macronutrient-dense meals for consumers interested in maintaining a healthy diet
- Deployed model pipeline to test which recipes were more macronutrient based on quantitative factors and data analysis

Oregon Trail Simulator C++

Riverside, CA

Software Developer

- Developed C++ scripts to reconstruct the original Oregon Trail product with modifications
- Provided a chatbot dependent on user input, designed internal models for the simulator to run independently, except for game restraints or user shutdown

Food Swap Swift

Santa Clara, CA

Dev Ops

- Built a full-stack mobile platform connecting restaurants and shelters for food donation
- Implemented user authentication and front-end design with Swift and generated user login
