

Devi Shaiva

<mailto:shaivapriya1@outlook.com> | +1 9134134452

Summary:

- **5 years and 6 months+ years as a Data Analyst** delivering insights for healthcare (e.g., **Dr. Reddy's Laboratories, J & J and Apollo**) and banking (e.g., **Axis Bank**), specializing in data modeling, ETL, and business intelligence.
- Extensive experience with Oracle Health Cerner, Epic, and Athena EHR for database structure, extract writing, and backend tooling, supporting clinical trial and patient data analytics.
- Leveraged Google Cloud Platform (**BigQuery**) for scalable data warehousing, real-time analytics, and high-availability solutions compliant with **CDSCO, ICH-GCP**, and RBI regulations.
- Conducted statistical analysis and data mining using **SAS, SPSS**, and machine learning (predictive modeling, clustering) to uncover trends and anomalies in clinical and financial datasets.
- Created interactive **Power BI and GCP** Data Studio dashboards to communicate metrics like drug trial outcomes, patient safety, and transaction patterns to stakeholders.
- Managed data analytics projects using SDLC and Agile methodologies, ensuring timely delivery and alignment with client feedback.
- Hands-on expertise in data cleaning, transformation, mapping, and database maintenance, ensuring data integrity and regulatory compliance.
- Strong client-interfacing skills, presenting insights to healthcare and **banking** stakeholders to drive decision-making for clinical trials, drug development, and risk management.
- Coordinated with data engineers and clinical/financial teams, mentoring junior analysts on EHR systems, SQL, and big data tools to achieve project goals.

Hands-on Skills

Category	Skills
Databases	SQL, NoSQL (MongoDB, Cassandra), Oracle, MySQL
Big Data & Cloud	Hadoop, Hive, Spark, PySpark, GCP (BigQuery, GCP Data Studio), Azure Databricks
Analytics & Tools	Tableau, Power BI, SAS, SPSS, Excel VBA, R, Machine Learning (Predictive Modeling, Clustering)
EHR / Healthcare Systems	Oracle Health Cerner, Epic, Athena, Clinical Trial Data Analytics, HIPAA compliance
Banking & Finance	Risk & Fraud Analytics, Transaction Data Mining, RBI Compliance
Methodologies	Agile, SDLC, Data Modeling, ETL, Data Pipelines
Programming / Scripting	Python, R, Excel VBA, SQL, Spark SQL
Documentation & Compliance	Audit-Ready Reports, Data Mapping, Compliance Docs

Experience:

COMPANY: DR. REDDY'S LABORATORIES (Healthcare)

Feb 2025 – Present

PRINCETON, NEW JERSEY,

ROLE: DATA ANALYST

- Developed and optimized EHR database structures for **Oracle Health Cerner**, Epic, and Athena, writing complex SQL queries and NoSQL scripts to support extract creation and backend configuration for clinical data integration and reporting.
- Performed advanced data analysis using SQL for structured data queries, **NoSQL** for unstructured clinical data, and big data tools (**Hadoop, Hive, Spark**) alongside machine learning algorithms (e.g., predictive modeling, clustering) and GCP BigQuery to uncover insights into drug efficacy, patient outcomes, and manufacturing performance.
- **Identified patterns**, trends, and anomalies in pharmaceutical datasets, such as adverse event rates, clinical trial outcomes, and supply chain inefficiencies, using Spark for large-scale processing and BigQuery for real-time analytics, supporting Dr. Reddy's evidence-based decision-making.
- Developed and maintained data models to represent pharmaceutical operations, including clinical trial workflows, regulatory compliance processes, and inventory management, leveraging SQL, NoSQL, and BigQuery for scalable data storage and analysis.
- Created interactive dashboards and reports using **Tableau, Power BI, and GCP Data Studio**, integrated with **SQL/NoSQL** queries and Spark-processed data, to communicate key metrics like drug trial success rates, patient safety indicators, and operational KPIs to Dr. Reddy's stakeholders.
- Configured and maintained backend tooling for **Oracle Health Cerner**, Epic, and Athena EHR systems, optimizing data extraction processes and ensuring seamless integration with GCP BigQuery for real-time clinical analytics and reporting.
- Documented data analysis procedures and findings, including **SQL/NoSQL queries, Spark/Hive** workflows, and EHR extract logic, in compliance with pharmaceutical regulatory standards, facilitating audits and cross-functional collaboration at **Dr. Reddy's**.
- Demonstrated initiative and flexibility by adapting to evolving project requirements, such as integrating new clinical data sources or addressing urgent analytical needs for **Dr. Reddy's drug** development and market access initiatives using GCP tools.
- Maintained high customer orientation by collaborating with Dr. Reddy's clinical and business teams to deliver tailored analytical solutions using **BigQuery** and **Spark**, providing actionable recommendations to optimize drug development and patient care processes.
- Upheld high quality awareness by implementing rigorous data validation and quality control processes within Hadoop, NoSQL, and **BigQuery** environments, ensuring accuracy and reliability of insights derived from sensitive clinical and operational data.
- Applied logical thinking and problem-solving skills to troubleshoot EHR data discrepancies, optimize SQL/NoSQL queries and Spark jobs, and collaborate with Dr. Reddy's data engineers and scientists to address complex pharmaceutical challenges.

- Leveraged domain knowledge in pharmaceuticals and financial processes to analyze clinical trial budgets, pricing models, and cost-effectiveness of drug development using Hive, Spark, and **BigQuery**, supporting Dr. Reddy's strategic planning.
- Utilized strong client-interfacing skills to **present SQL**- and **BigQuery**-derived insights to Dr. Reddy's stakeholders, fostering trust and aligning with goals for regulatory compliance and operational efficiency.
- Applied expertise in SDLC and Agile methodologies to manage data analytics projects, ensuring timely delivery of insights from Hadoop/Spark and **GCP** ecosystems while adapting to iterative feedback from Dr. Reddy's teams.
- Contributed to project and team management by coordinating with data engineers, clinical researchers, and pharmaceutical professionals to align analytical efforts with project goals, mentoring junior analysts on EHR systems, SQL, and big data tools.

COMPANY: COGNIZANT (IND)

MAY 2022- DEC 2022

CLIENT: AXIS BANK

ROLE: BIG DATA ANALYST

- Collected, cleaned, and organized large-scale financial datasets from sources such as transaction logs, customer profiles, and payment systems using **SQL** and **NoSQL** databases (**MongoDB, Cassandra**), ensuring data integrity and compliance with RBI regulations.
- Designed and implemented robust data pipelines using Hadoop, **Hive**, and **Spark** to automate data ingestion, processing, and analysis of high-volume banking data, significantly improving efficiency in payment processing and risk analytics workflows.
- Conducted advanced data analysis using SQL for structured queries and **NoSQL** for unstructured data, combined with big data tools (**Hadoop, Hive, Spark**) and machine learning techniques (e.g., anomaly detection, predictive modeling) to identify fraud, assess risk, and uncover transaction trends.
- Identified anomalies and patterns in financial data (e.g., suspicious transactions, credit risk indicators) using scalable data processing with Spark and Hive, enabling evidence-based decision-making for the risk and compliance teams.
- Developed and maintained data models representing banking operations such as customer segmentation, payment processing, and risk assessment using NoSQL databases and Hadoop ecosystem tools.
- Built interactive dashboards and reports in **Tableau** and **Power BI**, integrated with **SQL/NoSQL/Spark** data, to visualize key performance indicators (KPIs) like transaction volumes, fraud metrics, and customer churn for strategic stakeholder communication.
- Authored comprehensive documentation of data workflows, including **SQL/NoSQL** queries and **Spark/Hive jobs**, to support regulatory audits, knowledge sharing, and cross-functional collaboration.
- Demonstrated adaptability by incorporating new financial data sources and responding to evolving project requirements, supporting **Axis Bank's** digital transformation initiatives through agile big data solutions.

- Partnered with key stakeholders to deliver customized analytics solutions that enhanced customer experience, optimized payment systems, and improved risk management using Spark and NoSQL-driven insights.
- Ensured data quality and accuracy through rigorous validation processes across **Hadoop and NoSQL** environments, maintaining high standards for handling sensitive financial data.
- Resolved complex data issues by applying logical problem-solving skills, optimizing **Spark jobs** and database queries, and collaborating across engineering and business teams.
- Leveraged domain knowledge in banking to analyze transaction costs, pricing models, and risk exposure using Hive and Spark, supporting strategic planning for digital banking initiatives.
- Delivered clear, data-driven presentations to senior stakeholders, aligning insights with business objectives and building trust through actionable recommendations.
- Applied **SDLC** and **Agile** methodologies to manage analytics projects, ensuring timely delivery of insights and iterative refinement based on stakeholder feedback.
- Contributed to team leadership by coordinating with data engineers, analysts, and financial experts, mentoring junior team members on big data tools and best practices, and driving overall project performance.

CLIENT: Apollo Hospitals (Ind)

Jan 2020 – Apr 2022

ROLE: Data Analyst

RESPONSIBILITIES:

- Collected, cleaned, and organized large healthcare datasets from diverse sources, including electronic health records (**EHR**), patient management systems, and clinical trial databases, using SQL queries to extract and transform data, ensuring integrity and compliance with HIPAA regulations.
- Designed and validated data pipelines to streamline the ingestion, processing, and analysis of medical and operational data, leveraging **SQL** for efficient data extraction and transformation, improving accuracy in healthcare analytics workflows.
- Performed advanced data analysis using **SQL** for data querying, statistical methods, machine learning algorithms (e.g., **regression, clustering, predictive modeling**), and visualization tools (e.g., **Tableau, Power BI**) to uncover actionable insights into patient outcomes, treatment efficacy, and operational performance.
- Identified patterns, trends, and anomalies in healthcare datasets, such as disease prevalence, patient readmission rates, and resource utilization, using **SQL-based** analytics and statistical tools to support evidence-based decision-making for clinical and administrative stakeholders.
- Developed and maintained data models to represent healthcare business operations, including patient care workflows, billing processes, and supply chain logistics, utilizing **SQL** to query and structure data for accurate forecasting and resource allocation.
- Created interactive dashboards and reports using tools like Tableau and Power BI, integrated with SQL-driven data extracts, to communicate key findings on healthcare metrics, such as patient satisfaction scores and operational KPIs, to clinicians, administrators, and executives.

- Documented data analysis procedures and findings in clear, concise reports, including SQL query documentation, to ensure knowledge transfer and compliance with healthcare regulatory standards, facilitating cross-functional collaboration and audits.
- Demonstrated initiative and flexibility by adapting to evolving project requirements, such as integrating new data sources or addressing urgent analytical needs for healthcare initiatives using SQL and other tools.
- Used Azure Databricks with **PySpark** to process and aggregate massive, complex electronic health record (EHR) and medical imaging datasets
- Maintained high customer orientation by collaborating with healthcare clients to understand their needs, delivering tailored analytical solutions using SQL-driven insights, and providing actionable recommendations to improve patient care and operational efficiency.
- Upheld high-quality awareness by implementing rigorous data validation and quality control processes, including SQL-based data integrity checks, to ensure accuracy and reliability of insights derived from sensitive healthcare data.
- Applied logical thinking and problem-solving skills to troubleshoot data discrepancies, optimize SQL queries and analytical models, and collaborate with cross-functional teams to address complex healthcare challenges.
- Designed and optimized data pipelines using Hadoop, Spark, and Hive to process large-scale EHR datasets from Apollo Hospitals, enabling real-time analytics for patient outcomes and operational efficiency.
- Leveraged domain knowledge in healthcare and financial processes to analyze project budgets, pricing models, and cost-effectiveness of medical interventions using SQL for financial data analysis, supporting strategic planning for healthcare organizations.
- Utilized strong client-interfacing skills to present **SQL-derived**, data-driven insights to healthcare stakeholders, fostering trust and ensuring alignment with organizational goals and patient care objectives.
- Applied expertise in SDLC and Agile methodologies to manage data analytics projects, ensuring timely delivery of SQL-based insights while adapting to iterative feedback from healthcare clients.

CLIENT: JOHNSON & JOHNSON

JAN 2019- DEC 2019

DOMAIN HEALTH CARE:

(VIA: INFOSYS PRIVATE LIMITED)

RESPONSIBILITIES:

- Worked on monitoring statistics of email delivery and optimize email efficiency to increase customer engagement.
- Applied advanced SQL techniques (MySQL and PostgreSQL) to collect, cleanse, and transform large-scale healthcare datasets, including clinical trial results and patient data.

- Conducted in-depth analysis of medical device performance data, identifying key trends and operational inefficiencies to inform product development strategies.
- Developed comprehensive reports and dynamic dashboards to visualize key performance indicators (KPIs), enabling senior stakeholders to track project progress and make informed decisions.
- Utilized statistical methods to analyze the impact of various medical therapies, providing actionable insights that contributed to improved patient outcomes.
- Ensured data integrity and quality assurance by implementing rigorous checks and maintaining adherence to data privacy regulations relevant to the healthcare sector.
- Collaborated with a global team of data professionals and subject matter experts to resolve complex data issues and deliver solutions that met client requirements.

COMPANY: INFOSYS PRIVATE LIMITED

FEB 2018- DEC 2018

RESPONSIBILITIES:

- Worked on monitoring statistics of email delivery and optimize email efficiency to increase customer engagement.
- Analyzed result of A/B tests to find better time of email delivery for different topics using R .
- Set up automated systems used Excel VBA to pull the data smoothly into Tableau platform to create reports and dashboards.
- Collected data from internal sources using **MySQL** and performed data cleaning and aggregation for reporting and further analysis.
- Manipulated date and calculated key metric for reporting using **MySQL** queries (window function, subqueries) and MS Excel .
- Visualized data from MySQL and MS Excel using Tableau Dashboard to monitor email performance.
- connected to MySQL database using R package **RMySQL** and retrieving data for statistical analysis and visualization.
- Performed exploratory data analysis (**EDA**) to find insight such as difference efficiency among different devices using ggplot2 in R .

EDUCATION:

- **University of Central Missouri — Master of Science, Computer Science**
- **Sri Venkateswara University — Bachelor of Science**
