

Devika Reddy Kommula

devikakommula0610@gmail.com | 9803586770 | [LinkedIn](#)

PROFESSIONAL SUMMARY:

- About 5 years of experience as a Software Engineer in Java Full Stack Development across Banking, E-commerce, and Retail domains.
- Expertise in Core Java, J2EE, Spring Boot, Spring MVC, Spring Security, Hibernate, JPA, RESTful APIs, and Microservices architecture.
- Strong experience in React.js, JavaScript, TypeScript, Redux, HTML5, and CSS3 for building responsive front-end applications.
- Worked on developing responsive and scalable web applications using React.js, JavaScript, TypeScript, Redux, HTML, and CSS.
- Collaborated with UX designers to convert wireframes into working UI using Material-UI, Tailwind, Bootstrap, and Ant Design.
- Handled API integration, improved performance, wrote test cases with Jest Testing Library, and used Git for version control.
- Involved in UI deployments, preparing documentation using confluence, and used tools like Splunk, kibana and Grafana for monitoring.
- Skilled in working with PostgreSQL, MySQL, MongoDB and Oracle with expertise in SQL, PL/SQL and Hibernate ORM.
- Hands-on experience with Maven, Gradle build tools and application servers like Apache Tomcat, WebLogic, and WebSphere.
- Good understanding in Docker and Kubernetes for containerization and orchestration, and AWS for scalable cloud deployments.
- Implemented CI/CD pipelines using Jenkins and GitLab CI/CD for automation and continuous delivery.
- Built Grafana dashboards, configured alerts, and worked with Kibana and Splunk for log monitoring and troubleshooting.
- Worked in Test-Driven Development with hands-on experience in JUnit, Mockito, Spock Framework, integration testing, SonarQube and Spotless.
- Strong understanding of design patterns (DAO, Singleton, Factory, Front Controller) and Linux environments.
- Excellent team player with experience mentoring juniors and working in Agile environments.

TECHNICAL SKILLS:

- **Programming Languages:** Java, Python, JavaScript, TypeScript
- **Backend Development:** JPA, Hibernate, Spring Boot, Spring MVC, Spring Security, RESTful APIs, Microservices, Design Patterns, Test-Driven Development, Event-Driven Architecture
- **Frontend Development:** React JS, HTML, CSS, DHTML, AJAX, JSON, XML, HTML5, CSS3, Bootstrap
- **Databases:** PostgreSQL, MySQL, MongoDB, Oracle
- **Cloud Technologies:** AWS, GCP
- **DevOps Technologies:** GitLab CI/CD, Jenkins, Docker, Kubernetes
- **Testing:** Mockito, JUnit, Spock framework, Springboot Test, SonarQube, Spotless
- **Other:** Kafka, Debezium, Maven, Gradle, Grafana, Splunk

PROFESSIONAL EXPERIENCE:

Chain-Sys

Sep 2024 – Current

Java Full Stack Developer

- Developed order fulfilment modules in React.js, JavaScript, TypeScript, Redux, HTML5, and CSS to support store associates in order processing, prep, pack, and ship activities.
- Built reusable UI components and dashboards with Material-UI and Tailwind CSS to simplify daily order fulfilment tasks for store associates.

- Integrated scalable UI components with backend APIs to provide real-time order status, shipment tracking, and delivery progress.
- Developed microservices based Java 17 and Spring Boot applications for order fulfilment services, improving system scalability by 30% for order fulfilment data workflows.
- Integrated Apache Kafka for real-time event streaming and data pipelines, optimizing high-volume data processing for applications, reducing latency by 40% in inventory and logistics tracking.
- Implemented RESTful web services APIs to support data platforms, facilitating secure and efficient data exchange for order fulfillment such prep, pack and ship components.
- Containerized order fulfillment applications using Docker and orchestrated deployments with Kubernetes on Google Cloud Platform , automating CI/CD pipelines with Jenkins to streamline release cycles and ensure high availability.
- Used PostgreSQL for designing and managing relational databases, ensuring reliable data storage, optimized queries, and high-performance transaction processing.
- Wrote comprehensive unit tests using the Spock framework, achieving 85% code coverage and ensuring data integrity across modules such as inventory management and supplier data synchronization.
- Collaborated with cross-functional teams in an agile setup, contributing to sprint planning and code reviews.

SpringML - Turo

Jan 2022 – Dec 2023

Java Full Stack Developer

- Designed and deployed scalable microservices with Spring Boot, enhancing registration and reservation management efficiency for internal users.
- Built RESTful APIs to handle tasks like registering vehicles, creating reservations, and updating bookings, all with secure and reliable data flow.
- Designed Event Driven Architecture using Kafka to handle reservation confirmations and vehicle availability updates, ensuring scalability and low-latency processing.
- Worked closely with the frontend team to deliver an integrated interface which streamlines vehicle registration and reservation workflows for internal sales users.
- Improved performance and reliability of the PostgreSQL database by optimizing schemas and indexing strategies, enabling faster retrieval and updates of vehicle and reservation data.
- Deployed the application in AWS using Docker and Kubernetes ensuring scalability, availability and cost effective management.
- Collaborative development using Gitlab for version control and enabling efficient code reviews.
- Created the documentation in confluence covering the application, architecture and workflows facilitating ongoing support for internal teams.
- Participated in Agile practices using JIRA, contributing sprint planning, daily stand ups and retrospectives, to support iterative development and timely delivery of project milestones.
- Written test cases using Mockito and Spock frameworks, along with integration tests for Java Spring Boot applications, and ensured code quality with SonarQube and Spotless.
- Used Maven, but recently migrated to Gradle for building all our microservices.
- Written performance test scripts and analyzed metrics to improve app performance wherever improvements are needed.
- Wrote quick ad-hoc Python scripts for production issues to apply temporary fixes and keep systems running.
- Created monitoring dashboards in Grafana for application health, Kafka metrics, and database performance.

Persistent Systems - GeneDx

Oct 2020 – Nov 2021

Software Developer

- Developed scalable backend systems using Java 17 and Spring Boot, optimizing performance through complexity analysis and enhancing inter-service communication with Apache Kafka, boosting system throughput by 25%.
- Built a real-time data pipeline using Apache Kafka and Spring Boot that processes over 1 million financial events daily, improving system speed and data accuracy.
- Created and maintained responsive transaction management interfaces with React, ensuring smooth usability

across devices and adding dynamic form validations for payment details.

- Designed and implemented an automated CI/CD pipeline with GitLab CI and Kubernetes, cutting manual work by 70% and streamlining code deployments.
- Developed comprehensive test suites using JUnit, Mockito, and Spock to maintain high code quality and minimize production defects across distributed microservices.
- Managed containerized deployments with Docker and Kubernetes, enhancing resource efficiency and enabling seamless application scaling in cloud environments.
- Built Grafana dashboards connected to Java applications to track system health and set up alerts, helping the team quickly identify and fix issues.
- Implemented correlation id based logging and used Splunk to monitor and trace logs across services, making it easier to identify issues and speed up troubleshooting.

Persistent Systems - GeneDx

Jan 2020 – July 2020

Intern

- Developed backend APIs for product catalog and cart management using Java, Spring Boot, and RESTful web services, supporting core e-commerce operations.
 - Structured services following a microservices architecture, with each service handling a dedicated function such as product search or checkout, and connected through HTTP-based APIs.
 - Used Mysql for storing and retrieving structured data such as user accounts, order history, and inventory details containerized backend services with Docker to ensure consistent environments.
 - Gained practical experience with Git for version control, and worked on UI components using JavaScript and Angular, helping to implement dynamic product selection and shopping cart updates.
 - Built a product billing feature using Angular, enabling users to add items to the cart and generate itemized bills, incorporating client-side logic, form handling, and real-time UI updates.
-

EDUCATION:

Master of Science in Computer Science

Jun 2024 – May 2025

Trine University, Reston, Virginia

B.Tech in Computer Science Engineering

Jun 2016 - Aug 2020

G Narayanamma Institute of Technology and Science, Hyderabad, India
