

Devin Carusone *Software Engineer*

devincarusone2@gmail.com | (315) 748-0262 | Pulaski, NY

www.linkedin.com/in/devin-carusone

Summary

Software Engineer with over seven years of combined experience in programming, automation solutions, HVAC system maintenance and development. An expert in tackling complex issues and designing user-friendly systems that promote accessibility, efficiency, and reliability.

Experience

Software Engineer

June 2021 - Present

Day Automation

Hybrid

- Engineer automated control logic, user interfaces, and data visualization panes within Schneider Electric's EBO platform tailored to client specifications in over 1,500 buildings.
- Provide 24/7 remote electrical, mechanical, software, and firmware support for field technicians and end-users.
- Promoted from Software Technician to Software Engineer due to proven excellence in system design and programming.
- Lead research and development initiatives to enhance user experience, documentation, data accessibility, and system performance.
- Collaborate with various project teams, including engineers, managers, and field technicians to design and implement over 60 control systems.
- Assist in commissioning, conducting diagnostic tests, and resolving on-site issues to ensure system functionality and adherence to operational standards.
- Integrate BACnet third-party systems and devices into new and existing EBO frameworks.
- Provide ongoing support for employee onboarding, training, and development of Software Engineers; incorporate cutting edge Schneider Electric EBO tools and features into existing workflows.

Research Development And Engineering Programmer

July 2019 - May 2021

Fulton Thermal Solutions

Fulton, NY

- Designed, developed, and implemented ladder logic solutions for boiler control and lab management systems using Unitronics PLCs.
- Provided on-site support for software, electrical, and mechanical system errors.
- Maintained numerous pre-existing software packages simultaneously, ensuring consistent functionality and user satisfaction.
- Created and maintained clear and concise software system documentation, facilitating easier troubleshooting and system updates.
- Trained software developers on UniLogic and provided best practices for software architecture.

Intern Programmer

April 2018 - September 2018

Fulton Boiler Works

Fulton, NY

- Developed software applications for Unitronics PLCs using ladder logic.
- Created comprehensive documentation for programs, enhancing team collaboration and program understanding.
- Researched and compared physical components used in test systems, leading to improved component selection and system performance.

Intern Information Technology Technician

April 2017 - November, 2017

CITI BOCES IT Dept.

Fulton, NY

- Discovered and rectified issues with user PC systems, improving system performance and increasing machine uptime.
 - Provided technical support to end-users, resolving software and hardware issues to enhance productivity.
 - Installed and maintained network equipment, ensuring reliable connectivity and reducing network downtime.
-

Education

Bachelor Of Science in Computer Science, Information Technology 3.9 GPA

August 2019 - October 2021

Southern New Hampshire University

Manchester, NH

Skills & Interests

Technical: Software Design and Development, Unitronics, Allen Bradley PLC Ladder Logic, C++, C#, Python, Network Troubleshooting and Design, EcoStruxure Building Operation, BACnet, Modbus, MSTP, BACnet/IP, Engineering, Plain Text, Device Administrator, Software Administrator, System Optimization, Building Automation Systems

Soft Skills: Team-Player, Communicator, Problem-Solver, Detail Oriented, Adaptable, Concise
