SUMMARY

Data Analyst with 4+ years of experience transforming complex datasets into actionable insights that drive business growth and operational efficiency across technology and healthcare domains. Proficient in SQL, Python, R, and BI tools to automate workflows, build scalable data models, and deliver executive-ready dashboards. Proven success in reducing operational costs, accelerating decision-making, and optimizing processes through advanced analytics, inferential statistics, and automation.

PROFESSIONAL EXPERIENCE

The State University of New York, School of Management

Buffalo, NY

Project Analyst

Aug. 2024 – May 2025

- Built a comprehensive **financial forecasting model for UBMD Acute Care Surgery**, integrating surgeon volume, reimbursement rates, and operating room utilization data to predict **\$50K–\$150K in incremental annual revenue per provider**.
- Designed an **interactive physician search tool** reducing manual lookup time from 15 minutes to less than 2 minutes (**86% faster**), improved user efficiency and optimizing **scheduling workflows** for **UBMD surgical coordinators**.
- Created KPI-driven dashboards and data models for **Greg’s U-Pick Farm**, analyzing customer behavior and feedback patterns to inform targeted engagement strategies, increasing repeat visits by **25%**.

Subex

Bangalore, India

Data Analyst

Aug. 2021 - May 2024

- Delivered analytics solutions for **5+ European telecom clients**, analyzing backend logs, CDR datasets, and billing records to uncover revenue leakage, root-cause anomalies, and optimize fraud detection workflows.
- Resolved **450+ product and data issues** by analyzing backend logs, SQL queries, and system workflows within fraud management and revenue assurance systems; tracked issues using **JIRA**.
- Acted as a **bridge between business and technical teams**, documenting client requirements, providing functional clarifications.
- Automated **SQL-based validation pipelines**, reducing manual analysis time by **40%** and accelerating SLA resolution across multiple systems.
- Enhanced reporting logic to support **system migration** projects, remapping data connections and ensuring continuity in metrics tracking.
- Built and maintained **dashboards in Power BI and Tableau** to track SLA adherence, KPIs, incident metrics, and trend analysis, contributing to **\$1M+ in cost avoidance** across client accounts.
- Collaborated with engineering, QA, and support teams to identify risks, perform **root-cause analysis**, and implement **durable fixes** reducing recurrence of high-impact incidents.
- Awarded **Agile Surfer** for reducing **ticket backlog** to an all-time low and **Bull’s Eye Hitter** for closing **29+ long-pending tickets**.

SKILLS

- Languages & Tools:** SQL, Python, Power BI, Excel, Tableau, Pandas, NumPy, Hadoop
- Statistical Analysis:** Descriptive & Inferential Statistics, Hypothesis Testing, Regression, Forecasting
- Data Engineering:** ETL Development, Data Wrangling, Data Modeling, Automation Pipelines
- Software & Platforms:** Excel, Oracle, RStudio, Jupyter Notebooks, Linux, Azure (basic)
- Methodologies:** Business Intelligence, Data Visualization, KPI Reporting, Predictive Analytics

EDUCATION

MS, Business Analytics, University at Buffalo, **The State University of New York**

Jul. 2024 – May 2025

BS, Computer Science, **Visvesvaraya Technological University**

Aug. 2017 – Jul. 2021

RESEARCH PROJECTS

Amazon Global Sales GMT & Revenue Trend Dashboard | [Link](#)

Jan. 2025 - May 2025

- Analyzed 5,000+ records of Amazon’s global sales data across categories, countries, and timeframes to uncover revenue patterns; identified that Q4 alone contributed 35–40% of annual sales.
- Created an interactive Tableau dashboard using dual-axis charts, slicers, and calculated fields to present revenue metrics and category-wise trends, enabling non-technical users to interpret complex KPIs and inform regional sales strategies.

Data Warehouse Implementation for Retail Business | [Link](#)

Sep. 2024 – Dec. 2024

- Built a scalable Oracle data warehouse using Apache HOP and SSIS, creating multiple ETL pipelines to ingest, transform, and standardize disparate retail data into a centralized repository, addressing the challenge of reporting across systems.
- Designed Power BI reports with DAX-driven measures to replace Excel-based workflows, enabling real-time SKU-level inventory insights, reducing reporting time by 70%, and laying the foundation for improved stock planning across chains.
