Summary

Experienced data professional with 2 years of academic and project-based experience in data engineering and analytics, skilled in Python, SQL, and visualization tools, with experience in building data pipelines using Snowflake and Databricks. Proven ability to deliver ML-powered dashboards, forecast models, and extract business insights using EDA and NLP techniques. Strong communicator with experience presenting KPIs to leadership teams.

Experience

Fusion Academy, Richmond, VA — Data Engineer Consultant

Feb 2025 – Present

- Designed and implemented scalable ETL pipelines in Databricks using PySpark, integrating data from Snowflake, AWS S3, and internal systems to ensure seamless data availability for analytics.
- Performed comprehensive exploratory data analysis (EDA) and developed interactive Tableau dashboards to visualize KPIs, uncover business trends, and support operational decision-making.
- Built and deployed time-series forecasting models using Prophet, enabling accurate revenue predictions and improving quarterly financial planning across departments.
- Automated data workflows using CRON jobs and SQL stored procedures, streamlining reporting cycles and reducing manual intervention in recurring analytics processes.
- Defined and monitored critical performance metrics; regularly presented insights and strategic recommendations to cross-functional leadership teams.

Columbus State University, GA — Research Assistant

Nov 2023 – Nov 2024

- Collected and cleaned unstructured social media and forum data using BeautifulSoup and Tweepy.
- Built NLP models for sentiment analysis and cyberbullying detection using Random Forests.
- Performed EDA and hypothesis testing to extract insights from behavioral data.
- Created interactive Tableau dashboards for university-wide data reporting.
- Analyzed clickstream behavior to generate actionable recommendations for academic departments.

Siddhartha Institute of Engineering & Technology — Student Assistant

Sep 2020 – Dec 2022

- Tutored 50+ students in core CS subjects, providing guidance on coursework, clarifying complex concepts, and offering hands-on support in programming labs to strengthen practical skills.
- Built a Streamlit-based book recommendation system by integrating metadata matching and pandas/matplotlib for visual and personalized content discovery to the students.

Projects

NLP-Driven Business Insights Tool

- Processed 150+ interview transcripts to extract actionable business insights using Python, NLTK, Named Entity Recognition (NER), sentiment analysis, and LDA for topic modeling.
- Developed data visualizations and an intuitive user interface to present key themes, sentiment trends, and topic distributions to stakeholders for informed decision-making.

AI-Driven Business Viability Model

- Extended NLP pipeline to predict business success categories using supervised ML models.
- Achieved high predictive accuracy and deployed a real-time prediction tool with user input integration.

Education

Columbus State University, GA — M.S. in Applied Computer Science (AI & Data Science)

Aug 2023 – Dec 2024 | GPA: 3.9

Siddhartha Institute of Engineering & Technology — B.Tech in Computer Science Engineering

Aug 2019 – Apr 2023 | GPA: 3.6

Skills

Python, SQL, Java, SparkSQL, PySpark, Databricks, Snowflake, Tableau, Power BI, Oracle Analytics, Streamlit, Pandas, NLP, Machine Learning, Data Modeling, EDA, Git, Excel
