Professional Summary

Data Analyst with experience in designing **data pipelines, dashboards, and automated reporting systems**. Proficient in **SQL, Python, and R** for cleaning, transforming, and analyzing structured and unstructured data. Applied machine learning and statistical methods for **validation, anomaly detection, and predictive insights**. Skilled at translating technical findings into clear, actionable insights for both technical and non-technical stakeholders.

Education

Knox College

Bachelor of Science in Computer Science & Data Science

– Knox Trustees Scholarship; Dean's Honor List

Jun. 2025

Galesburg, IL

Certifications & Awards

Google Foundations of Cybersecurity, Deloitte Data Analytics Virtual Simulation, Data Mining Specialization (Coursera), Certified Ethical Hacker (Udemy), CompTIA Security+ (In Progress)

Experience

Data Researcher – Cyber Threat Intelligence

Feb. 2025 – Jun. 2025

Knox College

Galesburg, IL

- Implemented anomaly-detection and classification models to prioritize threats, reducing manual triage by **20%**.
- Processed **178K+ structured CVE records** and **2.5K+ unstructured security articles** using Python + SQL; applied schema checks, deduplication, and null handling.
- Developed an interactive **Streamlit** dashboard to visualize vulnerability severity, exploit trends, and risk signals.

Backend Developer – Astronomy Data System

Mar. 2025 – Jun. 2025

MACRO Consortium, Knox College

Galesburg, IL

- Automated daily ingestion of **100–150 FITS images (~15GB)** into structured datasets for research use.
- Designed a MySQL schema and implemented FastAPI ETL services with row-count reconciliation and format validation.
- Dockerized the ingestion pipeline for **production-ready deployment on cloud environments**.

ITS Lab Assistant

Sep. 2022 – Jun. 2025

Information Technology Services, Knox College

Galesburg, IL

- Resolved 20+ technical issues daily across hardware, software, and networks.
- Documented incidents and supported process improvements in IT operations.

Relevant Projects

Generative AI Data Quality Agent

2025

Databricks, PySpark, Looker, LLMs

- Built a PySpark pipeline in **Databricks** to detect anomalies and duplicates in enterprise datasets.
- Applied validation checks (nulls, types, thresholds) before analysis; integrated **LLMs** to generate automated summaries and remediation notes.
- Created a **Looker** dashboard combining validation metrics with LLM-generated insights.

Clinical Outcomes Dashboard

2025

SQL, Python, Power BI

- Developed a pipeline to aggregate engagement logs and applied SQL validations (duplicate checks, referential integrity, outlier detection).
- Designed a **Power BI** dashboard to monitor retention, session frequency, and outcome changes by cohort.
- Automated alerts for provider capacity and engagement anomalies.

Technical Skills

Programming: Python, R, SQL, Pandas, PySpark, **Apache Spark**, scikit-learn

Analytics & Visualization: Tableau, Power BI, Looker, Streamlit, Jupyter Notebook, Google Colab

Data Management: SQL schema design, SQLAlchemy ORM, ETL pipelines, Databricks; validation (schema checks, deduplication, reconciliation, thresholds)

Cloud & Tools: Databricks, AWS S3, Google BigQuery, Azure Data Factory, GitHub, Docker
