

JAVA FULL STACK DEVELOPER

Summary:

- AWS certified developer with 10+ years of extensive experience in Software Development Life Cycle (SDLC), Enterprise Web Application Design, Development, Programming, Testing, Support Maintenance, and End-User support.
- Expertise in building robust and scalable applications using Spring Boot, Spring Cloud, and Spring Security, ensuring secure and efficient microservices architecture.
- Proficient in building robust and scalable applications using microservices architecture and RESTful APIs.
- Extensive experience in developing web applications using AngularJS, leveraging its powerful features to create scalable and maintainable frontend architectures.
- Skilled in ReactJS, adept at building reusable components and managing state effectively using React Hooks and Context API, resulting in efficient applications.
- Proficient in HTML5, CSS3, and JavaScript, with a keen eye for design and user interface aesthetics, ensuring visually appealing and intuitive user experiences.
- Skilled in unit testing with frameworks like JUnit and integration testing with tools like Mocha and Chai to ensure code quality and reliability.
- Extensive hands-on experience in strategizing and implementing AWS cloud-specific technologies, including EC2, S3, Route 53, CloudFormation, code commit, code build, code pipeline, code deploy, Lambda, API Gateway, ECS, EKS, CloudWatch, SNS and RDS.
- Proven track record in designing and configuring secure Virtual Private Clouds (VPCs) within AWS, adept at crafting private and public network architectures. Skilled in creating diverse subnets, routing tables, and internet gateways to optimize server performance and security.
- Skilled in utilizing Swagger for automating API documentation, ensuring clear and comprehensive documentation of RESTful services for enhanced collaboration and understanding.
- Proficient in deploying microservices using Docker containers, demonstrating expertise in containerization techniques to achieve portability and scalability of applications.
- Skilled in setting up robust continuous integration and deployment pipelines using Jenkins integrated with GitHub, facilitating automated testing, building, and deployment processes.
- Experienced in configuring CI/CD pipelines on AWS or other Cloud Services, ensuring seamless integration with cloud infrastructure for efficient application delivery.
- Experience in developing Splunk queries and dashboards targeted at understanding application performance and capacity analysis.
- Experience in monitoring server applications, using Splunk log files to troubleshoot and resolve problems.
- Professional with extensive experience in managing and configuring JBoss, WebSphere and Tomcat application servers, adept at optimizing performance and ensuring seamless operation of web applications.
- Proven expertise in deploying, maintaining, and troubleshooting web servers and application servers, including JBoss and Tomcat, to support mission-critical business operations.
- Skilled in fine-tuning server configurations and monitoring server health to achieve optimal reliability, scalability, and security of web-based applications.
- Experienced in deploying, scaling, and managing containerized applications using Kubernetes.
- Experienced in deploying and managing Kubernetes clusters, facilitating efficient container orchestration and scalable application deployment in dynamic environments and familiar with Helm charts.
- Used DataDog for application performance monitoring (APM) and proficient in analyzing performance data and optimizing application resources.

- Proficient in SQL and various database management systems including MongoDB, Cassandra, PostgreSQL, and Oracle SQL, with a strong foundation in relational and NoSQL database concepts.
- Expertise in Azure Development worked on Azure web application, App services, Azure storage, Azure SQL Database, Azure Virtual Machines, Azure Kubernetes services, Azure AD, Azure Functions, Azure DNS, Azure VPN Gateway, and Notification hub.
- Proficient in managing the source code control of multiple development efforts using, Subversion (SVN), TFS (for Windows Environment), CVS, GIT and Bitbucket control tools.

SKILLS

Category	Skills
Programming Languages:	JAVA/J2EE, Python, Scala, Shell Scripting, SQL
Web Technologies:	HTML, CSS, JavaScript, Spring Boot , React, Angular 4/7/9/13/15, jQuery, NodeJS, XML
Java/J2EE Technologies:	JSP, Servlets, JDBC, EJB's, JMS, JUNIT, JAXB
Frameworks:	MVC 1/2.0, Spring/Spring Boot, Hibernate 3.0
Version Control:	GIT, GitHub, GitLab, TFS
Databases:	MYSQL, MS SQL, PostgreSQL, MongoDB, Amazon DynamoDB
Messaging Systems:	Kafka, RabbitMQ
Application/Web Servers:	WebLogic, Apache Tomcat, Apache HTTP, Websphere, Weblogic.
IDE Tools and Build Tools:	Eclipse, IntelliJ, VS code, Ant, Maven, Gradle, Cloud Formation, Terraform
Cloud Environment:	AWS, Azure, GCP
Build and Release Tools:	CI/CD, Splunk, Ansible, Jenkins, Azure DevOps
Ticketing Tools:	Jira, ServiceNow, Remedy
Containerization Tools:	Docker, Kubernetes
Methodology	Waterfall, Agile, SCRUM
Cloud Console Services	IAM, VPC, SES, SNS, SWF, AWS CDK/SDK, Elastic cache, code commit, code pipeline, code deploy, Server migration, Amazon EMR, Redshift, storage Gateway, API Gateway
Webservice Technologies	AXIS2, SOAP, WSDL, WADL, GraphQL, REST (JAX-RS).

EDUCATION:

Bachelor of Engineering, Computer Science
GITAM University, (GPA: 3.5/4.0) Hyderabad, India
May 2010 – Mar 2014

Master's, Computer Science Dayton, Ohio
University of Dayton, (GPA: 3.84/4.0) Jan 2018 – May 2019

Professional Experience:

Client: Goldman Sachs

Sept 2024 to Till Date

Role: Sr. Full stack Java Developer

Responsibilities:

- Developed RESTful APIs using Java, Spring Boot, ensuring high-performance and reliable communication between microservices, aligned with best practices in API design.
- Implemented file encryption and decryption mechanisms using AES to ensure data security and compliance with regulatory standards, enhancing data protection for critical information.
- Integrated Spring Data JPA/Hibernate for efficient database interactions with various relational databases, ensuring optimal performance and maintainability.
- Designed and implemented real-time stream processing solutions using Apache Kafka, enabling high-throughput, low-latency messaging systems that support scalable, distributed applications.
- Developed Kafka producers and consumers to process, route, and consume large volumes of data across various systems, ensuring reliable data transmission and integration between services.

- Optimized message queueing strategies with Kafka, ensuring fault tolerance and message persistence with replication and partitioning, which increased system availability and resilience.
- Designed custom Adobe Analytics reports and dashboards, providing actionable insights to stakeholders and facilitating data-driven decision-making.
- Configured tracking codes in Adobe Analytics to monitor user behavior, site traffic, and conversion rates, optimizing customer journeys.
- Utilized Java Streams API and functional programming paradigms to optimize data processing tasks.
- Applied Spring Security for role-based access control (RBAC) and OAuth2/JWT for secure authentication and authorization.
- Designed and implemented reusable React components, enhancing maintainability and scalability across multiple projects.
- Applied React Router for seamless client-side navigation, enabling efficient routing for single-page applications (SPA).
- Optimized React JS applications for performance by implementing lazy loading, memorization, and code splitting techniques.
- Designed and implemented comprehensive API test cases using postman to validate RESTful APIs ensuring functionality, reliability and compliance with requirements.
- Deployed CI/CD pipelines using GitLab and Gradle, facilitating efficient build automation and deployment for microservices.
- Leveraged GitLab for version control, maintaining clean and manageable code repositories while coordinating with team members to streamline development.
- Designed and deployed scalable cloud applications using AWS S3 for storage, EC2 for compute, Elastic Beanstalk for managed deployments, and API Gateway for API management, ensuring high availability, scalability, and seamless integration across services.
- Built serverless solutions using AWS Lambda for event-driven processing, SQS for message queueing, SNS for real-time notifications, and CloudFormation for infrastructure automation, while monitoring and optimizing performance with CloudWatch and managing source control via CodeCommit.
- Integrated Splunk for centralized logging and monitoring of microservices and distributed systems, improving system observability and troubleshooting.
- Configured Splunk forwarders to collect logs from application servers, ensuring comprehensive coverage of logs across environments (development, staging, production).

Client: Liberty Mutual, Dover, NH

June 2021 to August 2024

Role: Sr. Full stack Java Developer

Responsibilities:

- Participated in Agile Scrum methodology for application development and involved in analysis, design, coding, and unit testing of business applications in a fast-paced environment.
- Implemented authentication and authorization mechanisms using Spring Security, enforcing role-based access control (RBAC) and ensuring data privacy and integrity.
- Implemented job configurations and step executions in Spring Batch to manage large data sets, ensuring scalability and high performance.
- Created quality gates in SonarQube dashboard and enforced in the pipelines to ensure build fails when threshold conditions are not met.
- Leveraged MongoDB for Java annotations and metadata to simplify CRUD operations and data validation within application framework.
- Engineered and optimized SQL queries and database schemas to support high-performance data retrieval and storage for enterprise-grade applications.
- Proficient in UNIX shell scripting for system operations, deployment automation, and performance tuning tasks.
- Integrated Redis as a primary data store for session management in a scalable web application.
- Optimized Redis configurations and monitored performance metrics to ensure efficient data storage and retrieval.

- Designed and implemented Access Control Lists (ACLs) for securing APIs and resources in Java-based microservices architecture.
- Experienced in React JS and working with React Flux architecture and used React-Router to transform the application into Single Page Application.
- Applied Redux with React JS for state management across complex applications, while using Node.js to handle the back-end logic and persist user data in databases.
- Implemented JWT authentication and authorization in both React JS and Node.js, ensuring secure and scalable login and session management.
- Automated reporting and data extraction from Adobe Analytics, reducing manual effort and improving data accessibility for business stakeholders.
- Utilized Postman to perform automated API testing, ensuring correct functionality and performance of APIs by creating and executing a range of test scenarios and validating API responses.
- Implemented Kafka for stream processing, handling high-throughput, low-latency messaging, and integrated it with Lambda and Kinesis for real-time data analytics and seamless data flow across microservices.
- Conducted unit testing and integration testing using frameworks like Mocha and Chai to ensure code reliability and maintainability.
- Designed and developed GraphQL services using AWS AppSync, enabling flexible and efficient data querying for front-end applications.
- Implemented and tested various GraphQL queries, mutations, and subscriptions, providing optimized and real-time data updates across distributed applications.
- Implemented unit tests using JUnit and Mockito frameworks to ensure code quality and reliability.
- Experience in writing test cases, mocking dependencies, and performing test-driven development (TDD).
- Automated the provisioning and management of AWS infrastructure using Terraform and Terragrunt, ensuring consistent and repeatable deployments across environments.
- Developed and maintained Terraform scripts to provision various AWS resources, such as EC2 instances, Lambda functions, S3 buckets, and security groups, reducing manual effort and infrastructure overhead.
- Designed, deployed, and maintained scalable applications using AWS S3 for storage, EC2 for compute resources, and Elastic Beanstalk for managed deployments, ensuring high availability and efficient resource utilization.
- Developed and deployed serverless applications using AWS Lambda, integrating with API Gateway for API management, SQS for message queuing, and SNS for real-time notifications, optimizing event-driven workflows.
- Leveraged AWS Kinesis for real-time data streaming and integrated DynamoDB and Aurora for high-performance NoSQL and relational database management, ensuring seamless data storage and processing at scale.
- Utilized AWS CloudWatch for monitoring, logging, and performance optimization, and automated infrastructure provisioning with AWS CloudFormation and version control using AWS CodeCommit to streamline CI/CD workflows.
- Managed data warehousing solutions with AWS Redshift, performing high-performance analytics and reporting, while integrating Node.js back-end services to interact with AWS resources for real-time data processing.
- Installed and configured Splunk for log monitoring and forwarded system stats to Splunk indexer and created alerts using this data.
- Monitored the applications on cloud and servers' performance on which the application was deployed using Splunk as the monitoring tool.

Client: PayPal, Scottsdale, AZ
Role: Full Stack Java Developer

Jan 2020 - June 2021

Responsibilities:

- Participated in Agile Scrum methodology for application development and involved in analysis, design, coding, and unit testing of business applications in a fast-paced environment.
- Developed Java Springboot applications for secure transaction processing by leveraging Java's enhanced security features to ensure the confidentiality, integrity, and authenticity of financial transactions.
- Implemented RESTful Web Services using Spring Boot and performed CRUD operations on database, published the

REST services and parsed the data from project to client.

- Used POSTMAN for testing RESTFUL API web services and handled the security, authorization and authentication using Spring Security and OAuth.
- Integrated Angular applications with RESTful APIs, handling HTTP requests and responses using Angular's HttpClient module.
- Implemented complex form validations and error handling in Angular Reactive Forms, ensuring data integrity and user input validation.
- Implemented authentication and authorization mechanisms (JWT, OAuth) in Angular applications, ensuring secure access control.
- Used Agile methodology and effectively took part in Scrum gatherings to deliver quality deliverable within time.
- Additional responsibilities like actively closing defects identified by QA team and writing unit test cases by using JEST unit testing framework.
- Developed batch loading and unloading processes for bulk data ingestion and extraction from PostgreSQL using Java.
- Implemented optimized batch insert and update operations using batch statements and prepared statements to improve throughput and efficiency.
- Designed and configured Azure Virtual Networks (V-Nets), Subnets, Azure Network Security Groups, DNS Settings, Security policies and Routing.
- Deployed and optimized two tier Java web applications to Azure DevOps CI/CD to focus on development by using services such as Repos to commit codes, Test Plans to unit test, deploy App Service, Azure Application Insight collects health performance and usage data of the process, stored artifacts in blob storages.
- Implemented Docker containerization to encapsulate applications and dependencies, enhancing portability and scalability across diverse environments.
- Implemented infrastructure as code (IaC) using tools like Terraform templates to provision and manage AWS resources required for CI/CD and containerization.

Client: CVS health, Pittsburgh, PA

Dec 2018 - Dec 2019

Role: Full Stack Java Developer

Responsibilities:

- Participated in Agile Scrum methodology for application development and involved in analysis, design, coding, and unit testing of business applications in a fast-paced environment.
- Created Typescript reusable components and services to consume REST API's using component- based architecture provided by Angular 4.
- Design, Develop, test, implement and support application Logging mechanism using Java/J2EE, Spring and Hibernate frameworks in the wealth compliance space.
- Designed the project using Dispatcher Servlets, Controllers and View Resolvers of Spring MVC framework using spring concepts like DI Dependency Injection and AOP for business logic.
- Extensively worked on Spring REST for creating REST API's services with Spring Boot to modularize code and used Spring Data to access data from MYSQL database.
- Used complete annotation driven approach to develop the application using Spring Boot and was involved in setting up the spring bean profiling.
- New library development with micro services architecture using Rest APIs, spring boot and Spring Cloud.
- Develop and modify the build scripts to migrate from existing ANT Framework to MAVEN framework.
- Used Maven as build tool and Jenkins for CD/CI deployment process and used GIT for version management.
- Involved in creating unit testing of various layers using JUnit with Easy Mock.
- Orchestrated Azure CI/CD pipelines using Azure DevOps, automating the build, test, and deployment processes for cloud-native applications.
- Used Splunk for monitoring and maintaining Application Logs.

Client: Fremont bank, Fremont, CA

Jun 2018 - Dec 2018

Role: Java Developer

Responsibilities:

- Created the UI Interface using JSP, JavaScript, JQuery, CSS3, HTML5 and AngularJS.
- Performed Client-side validation using JavaScript.
- Created cross-browser compatible and standards-compliant CSS-based page layouts.
- Developed Servlets and JSPs based on MVC pattern using Spring Framework.
- Configured Struts-Config file for form-beans, global forwards, error forwards and action forwards.
- Designed and implemented Report Module (using Jasper Report framework).
- Created several JSP's and populated them with data from database.
- Developing Web Services using Apache Axis 2 to retrieve data from legacy systems.
- Manage Splunk configuration files like inputs, props, transforms, and lookups.
- Used Splunk tool to analyze the logs in the applications.
- Worked on minor encasements to the existing Android application.
- Developed Servlets, Action classes, Action Form classes and configured the struts-config.xml file.
- Planned and implemented various SQL, Stored Procedure, and triggers.
- Used Hibernate to access My SQL database and implemented of connection pooling.
- Performed building and deployment of WAR, JAR files on test, stage, and production systems in JBoss application server.
- Used Maven for the build process.

Client: GlobalLogic Technologies Pvt Ltd, Hyderabad, India

Mar 2014 to Dec 2017

Role: Software Engineer

Responsibilities:

- Extensively worked on designing web pages using HTML, DHTML, CSS, JavaScript, and Ajax.
- Used JQuery plug-ins for Drag-and- Drop, Widgets, Menus, User Interface, and Forms.
- Extensively used JQUERY, JSON, AJAX, and DOM scripting to create interactive web applications like message posting and auto complete form validations.
- Used Web Developer, Firebug, and IE developer toolbar for debugging and browser compatibility.
- Used pagination component of JQuery for navigation in statement enquiry module, used DOM and AJAX to display page contents.
- Used Dependency Injection feature of Spring framework and Involved in writing the database integration code using Hibernate, leveraged the AOP features of Spring framework to handle exceptions.
- Used Spring framework configuration files to manage objects and to achieve dependency injection.
- Applied Object-Oriented Programming (OOP) concepts (including UML use cases, class diagrams, and interaction diagrams).
- Created Web services using Apache Axis 2 for communication with other application.
- Installed and configured the development environment using JBoss on Windows NT and LINUX operating systems.
- Created and executed unit and regression test scripts; created personal and common test data, tracked actual vs. expected results, and evaluated quality of modules created.
- Responsible for delivering changes to different Development, Integration and User Acceptance Testing regions, supporting User Acceptance testing, and addressing defects and supporting the system in Production and fixing Production defects.
