

DHILEEP KUMAR REDDY ADDULA

Full Stack Java Developer

adduladhileep8@gmail.com | +1 (219) 804-3852 | www.linkedin.com/in/dhileep-a-85b918109

PROFESSIONAL SUMMARY

With around 6 years of experience in software development, I specialize in building scalable, high-performance applications using Java, Spring Boot, Microservices, and Angular 12. I have a solid foundation in designing and implementing RESTful APIs, leveraging Spring Frameworks (Spring Boot, Spring Data, Spring Security) and hibernate to create robust back-end solutions. My expertise also extends to AWS cloud technologies (EC2, S3, CloudWatch), deploying and maintaining cloud infrastructure, and ensuring smooth CI/CD pipelines using Jenkins and Bitbucket. Well-versed in Agile methodologies, adhering to TDD and BDD practices to deliver high-quality software. Additionally, I possess strong experience in SQL/PL-SQL, Oracle databases, and MongoDB, with a focus on performance optimization and integrating systems using Apache Kafka for real-time data processing. I am committed to collaborating effectively with teams, adapting to new technologies, and contributing to the success of each project.

CORE COMPETENCIES

- **Technical Skills:** Java, Python, Spring, IBM ODM, IBM BPM, SQL, JDBC, ReactJS, HTML5, CSS3, JavaScript, WebSphere Application Server (WAS), AWS cloud technologies (EC2, S3, CloudWatch).
- **Frameworks & Tools:** Spring Framework, IBM Integration Designer, IBM ODM, Business Console, UNIX, JDBC, RESTful APIs, SOAP Web Services, Eclipse, Visual Studio, Agile/Scrum, SDLC, SoapUI, Postman, IBM WebSphere, Rule Execution Server (RES).
- **System Design & Architecture:** System Architecture, Rule Management, Automation, Enterprise Integration, Testing, Maintenance
- **Leadership & Collaboration:** Team Leadership, Client Communication, Mentorship, Project Management, Accountability, Delivering Results, Passionate, Driven
- **Soft Skills:** Problem Solving, Analytical Thinking, Strategic Planning, Collaboration, Client Engagement, Competitive, Flexible
- **Concepts:** SOA (Service-Oriented Architecture), SDLC, Agile/Scrum, Object-Oriented Programming (OOP), RESTful Web Services, SOAP Web Services, Automation, Architecture, Testing
- **Databases:** My SQL, SQL Server, DB2
- **Version Control:** Git, GitHub, SVN, Big Bucket

PROFESSIONAL EXPERIENCE

Java Full Stack Developer

Texas, USA

Avalanche Technologies

May 2024 – Jan 2025

- Actively involved in the analysis, design, development, testing, and maintenance of enterprise-level applications using Agile methodology, participating in daily stand-up meetings, weekly scrum sessions, and sprint planning.
- Developed and maintained enterprise-level applications utilizing Java, Spring Boot, REST, Spring Data, Spring Cloud, Hibernate, Spring Security, Oracle, and Messaging technologies. Adhered to Test-Driven Development (TDD) and Behavior-Driven Development (BDD) practices to ensure high-quality code.
- Used Spring Dependency Injection, Spring MVC components, Spring Annotations, and other Spring Modules to implement the business layer and navigation logic of the application.
- Designed and implemented Microservice architecture with Spring Boot-based services, facilitating communication through REST APIs and Apache Kafka message queues for efficient data processing.
- Designed and implemented RESTful APIs that followed best practices, ensuring the high scalability, security, and efficiency of backend services.
- Implemented Java 8 features such as Lambda Expressions, Advanced for-each loops, and Streams for improved performance and code optimization.

- Utilized core Java concepts including Collections, Generics, Exception handling, Multithreading, I/O operations, Singleton, and Concurrency to develop the business logic of the application.
- Developed Single Page Applications (SPA) using Angular 12, TypeScript, Angular CLI, HTML5, CSS3, JavaScript, and Bootstrap to deliver dynamic and responsive web interfaces.
- Used HTML5 for content display, CSS3 for styling, and Bootstrap for designing and customizing web pages quickly and effectively.
- Worked with Angular 12 Controllers, Filters, Validations, Services, Factories, and custom directives to integrate with backend services via REST APIs. Applied advanced Angular 12 features like new if-else syntax, ng-templates, and form validators.
- Implemented form validations in Angular 12 and utilized Bootstrap to display errors, warnings, and info messages for enhanced user interaction.
- Designed and implemented Kafka producers and consumers for seamless data exchange and efficient processing across distributed services.
- Developed reusable and scalable UI components following a component-based architecture in Micro Frontend development to improve maintainability and performance.
- Applied performance optimization techniques in micro frontends, such as lazy loading and code splitting, to enhance application speed and user experience.
- Utilized Kafka Connect to integrate Kafka with various data sources and sinks, ensuring smooth data synchronization and ingestion across systems.
- Developed unit tests for the application using JUnit and Mockito, following test-driven development practices. Used SonarQube for code quality analysis and improvement.
- Demonstrated proficiency in SQL/ORM technologies, handling relational databases, and leveraging NoSQL technologies like MongoDB for specific use cases.
- Extensive experience in MongoDB, including the deployment and management of clusters and performing DML operations using JavaScript.
- Monitored AWS infrastructure and application performance using AWS CloudWatch, collecting operational and performance metrics during load testing to ensure optimal system health.
- Managed AWS infrastructure using EC2, S3, CloudWatch, and IAM for secure and efficient cloud resource management and monitoring.
- Used Bitbucket for version control and Bamboo for continuous integration and continuous deployment (CI/CD), automating build and deployment processes.
- Integrated CI/CD processes using Jenkins, ensuring seamless code integration, automated testing, and deployment for efficient delivery cycles.

Software Developer

Valiant IT Services

Hammond, IN

Feb 2024- Apr 2024

- Possess strong Java programming skills with web-based development, including the latest Java and Open-Source tools like Spring, Hibernate and Struts, and Oracle database architecture.
- Develop user interface components using Java, JSP, Ext JS, HTML, JavaScript, and jQuery.
- Converts project specifications into a sequence of detailed instructions and logical steps for coding into computer language, applying knowledge of programming languages and techniques
- Involve in analysis, specification, design, implementation, and testing phases of the Software Development Life Cycle
- (SDLC), Participate in daily stand-up, planning, iteration review, kick-off, and retrospective meetings.
- Create interfaces, run batch jobs, and build web services for real-time access.
- Responsible for coding SQL Statements and Stored procedures for back-end communication using JDBC
- Designed and implemented schema-less data models using NoSQL databases such as MongoDB and Cassandra.
- Implemented indexing and query optimization techniques in NoSQL databases to improve data retrieval performance.
- Implemented event-driven architecture using Apache Kafka for real-time data processing and message streaming.
- Execute all phases of software application projects including resolving issues and helping to ensure successful deployment.
- Developed Java-based web applications, technical applications, and user interfaces Modified and enhanced.

- Develop React services using resource service to perform REST API calls to the backend.
- Develop reporting dashboards, which process large amounts of data stored in Elastic Search. Implement Microservices architecture using Spring BOOT-enabled REST API with the Spring Cloud modules.
- Attend design review meetings, grooming, planning/training sessions, and standup meetings to plan for future user stories and sprints.
- Deployed and managed applications on AWS cloud infrastructure using services like EC2, S3, RDS, and Lambda.
- Designed and implemented scalable and fault-tolerant architectures using AWS Elastic Beanstalk and Auto Scaling.
- Implemented security best practices in AWS environments, including IAM roles, policies, and VPC configurations.

Software Intern -SDE

Purdue University

Hammond, IN

Jan 2023- Apr 2023

- Collaborated with an external company under the guidance of a lead, contributing to the development of a complete product.
- Worked in a team of three, dividing the project into front-end, back-end, and database components to ensure efficient progress and collaboration.
- Developed the front-end using JavaScript, HTML, and CSS, ensuring a responsive and user-friendly interface.
- Implemented the back-end using Node.js and Java, focusing on scalability, performance, and security.
- Designed and developed the database structure using SQL to ensure data consistency, reliability, and integration with the backend system.
- Utilized Git and Big Bucket as version control tools to maintain code quality, manage team workflows, and track project changes.
- Created UML diagrams to represent system architecture and design, improving communication and understanding across the team.
- Followed Agile practices, participating in regular sprints and stand-ups to adapt to project needs and ensure timely delivery.
- Fostered strong teamwork by maintaining clear communication, collaborating effectively, and achieving project milestones within deadlines.
- Contributed to the successful delivery of the project, meeting requirements and demonstrating excellent team coordination and technical skills.

IT Consultant

Darkhorse Digital Solutions, India

Hyderabad, INDIA

May 2019 - July 2022

Client: TATA-AIG

SDLC:

- Participated in Agile development cycles, working in Scrum teams, collaborating with developers, business analysts, and stakeholders to ensure timely delivery of features and project milestones.
- Utilized Agile methodologies to deliver incremental solutions, continuously adapting to changing business requirements and enhancing product features based on stakeholder feedback.
- Contributed to strategic planning sessions with business stakeholders, offering insights into how technology can be leveraged to achieve operational efficiencies and growth in client operations.
- Automated critical business processes using IBM ODM for decision management and rule execution, reducing manual intervention and increasing system efficiency.
- Implemented automated testing scripts to ensure system reliability, improving testing efficiency by reducing manual testing time by 25%.
- Optimized workflows through the automation of repetitive tasks, ensuring faster processing and decision-making capabilities for business functions.
- Software Engineering & Information Systems:
- Strong background in Software Engineering principles, applying best practices for object-oriented programming (OOP), design patterns, and system design to build scalable and maintainable systems.
- Contributed to the development and optimization of information systems, ensuring seamless integration across multiple business platforms and domains, including insurance, finance, and customer service.
- Skilled at developing backend systems using Java, ensuring high performance, security, and integration with business systems across the enterprise.
- Led the end-to-end testing process for multiple systems, including the testing of web services, APIs, and

backend logic, to ensure seamless deployment and functionality in production environments.

- Identified and resolved defects and bugs during the testing phase, ensuring consistent quality and performance across deployed services and applications.
- Created and maintained detailed technical documentation for the development, testing, and deployment of services, ensuring clarity and consistency for both developers and stakeholders.
- Developed user manuals and deployment guides to assist clients and team members with system integrations, upgrades, and troubleshooting.
- Documented system design decisions and changes to ensure that future developers and teams could easily understand the project history and rationale behind key decisions.
- Leveraged analytical skills to identify bottlenecks in systems and proposed optimization strategies that led to a 15% improvement in overall system performance.
- Applied a problem-solving mindset in troubleshooting system issues, collaborating with cross-functional teams to identify root causes and implement effective solutions.
- Demonstrated exceptional problem-solving abilities in analyzing and resolving complex issues related to system performance, architecture, and integration across multiple platforms.
- Identified and resolved critical production issues in real-time, utilizing a data-driven approach to diagnose root causes and implement effective solutions that improved system uptime by 99%.
- Collaborated with senior leadership to design long-term strategies that supported business growth, operational efficiency, and innovation.
- Utilized AppDynamics to analyze performance metrics, logs, and user feedback, deriving actionable insights to improve application performance and enhance the overall user experience.
- Leveraged data insights and analytics to create actionable strategies that enhanced business performance and customer experience.
- Led the resolution of technical challenges during the integration of third-party services, applying analytical techniques to ensure smooth transitions and seamless communication between systems.
- Worked on optimizing system processes by identifying inefficiencies, proposing and implementing solutions that resulted in a 15% reduction in processing time for business operations.
- Collaborated with cross-functional teams to brainstorm, strategize, and resolve business challenges, ensuring solutions aligned with business requirements and project timelines.

Leadership:

- Led a small team of developers in the design, development, and maintenance of IBM BPM and IBM ODM-based solutions for various insurance products.
- Coordinated with cross-functional teams, including business analysts and stakeholders, to gather requirements and translate them into technical solutions.
- Successfully managed client relationships, providing project updates, gathering feedback, and ensuring project delivery within timeframes and business requirements.
- Demonstrated leadership by mentoring junior team members, ensuring they adhered to coding standards and best practices throughout the development lifecycle.
- Presented project outcomes at annual meetings and conferences for clients, receiving accolades for the quality of work delivered by the team.
- Demonstrated strong communication and presentation skills, effectively showcasing project achievements and contributing to positive client feedback.

Software Intern

Darkhorse Digital Solutions, India

Hyderabad, INDIA

Jan 2019 - April 2019

- Developed essential business, financial, and analytical skills, applying classroom knowledge to real-world projects.
- Leveraged understanding of Java, JavaScript, and business process automation to design solutions addressing key business challenges.
- Designed and developed front-end applications using IBM BPM and JavaScript, ensuring user-friendly and efficient interfaces.
- Engineered back-end solutions in Java, integrating JDBC connections and working with SQL databases to ensure smooth data flow and system performance.
- Collaborated with a professional team to analyze workflow issues, develop actionable solutions, and implement process improvements.
- Recognized by management for designing and executing a special project that improved operational efficiency

during the internship.

- Regularly communicated with the Lead/Instructor to receive guidance on day-to-day tasks and project responsibilities.

EDUCATION

Master of Engineering in Computer Science
