

DHRITI SUNIL KANCHAN

DATA ANALYST

TX, USA | (551)307-0246 | dhriti.kanchan27@gmail.com | [LinkedIn](#)

SUMMARY

- Data Analyst with 5+ years of experience delivering end-to-end analytics solutions, building scalable ETL pipelines, ensuring data accuracy, consistency, and regulatory compliance, while generating actionable insights across healthcare and banking domains to support strategic and operational decision-making.
- Proficient in **Python, SQL, PySpark, SSIS, Ab Initio, Oracle SQL/PLSQL, and UNIX Shell Scripting**, leveraging these tools for data extraction, transformation, integration, cleansing, and automation, handling large datasets efficiently, and ensuring high-quality, reliable outputs.
- Skilled in **Tableau, Power BI, and Advanced Excel (PivotTables, VBA, Macros)** for designing interactive dashboards, KPI visualizations, drill-through reports, and analytical summaries, transforming complex raw data into clear, actionable insights to drive informed business decisions.
- Experienced in building ETL pipelines, dashboards, and predictive analytics at McKesson and L&T Infotech, delivering actionable insights on pharmaceutical distribution, inventory management, banking transactions, and operational performance to improve business efficiency and decision-making

SKILLS

ETL & Data Pipeline Tools	Ab Initio, SSIS, SSRS, Data Bricks, Alteryx, Data Mining, Data Warehousing, Data Transformation
Methodologies	SDLC, Agile, Waterfall
Programming & Scripting Languages	Python, SQL, UNIX Shell Scripting
IDEs & Development Tools	Visual Studio Code, PyCharm, Jupyter Notebook, GitHub, Jira
Libraries & Packages	NumPy, Pandas, Matplotlib, SciPy, ggplot2, TensorFlow, Seaborn, Scikit-learn
Data Visualization Tools	Tableau, Power BI, Amazon QuickSight, Advanced Excel (Pivot Tables, VLOOKUP)
Databases	MySQL, SQL Server
Cloud Platforms & Big Data	Amazon Web Services (AWS), Google Cloud Platform, Azure, Hadoop, Spark, Kubernetes
Statistical & ML Techniques	Machine Learning Algorithms, Probability Distributions, Predictive Modelling, Hypothesis Testing, Regression Analysis, Linear Algebra, Advanced Analytics, Clustering, Classification, Regression, A/B Testing, Forecasting & Modelling, Data Cleaning
Operating Systems	Windows, Linux, Mac OS

PROFESSIONAL EXPERIENCE

Data Analyst | [McKesson Corporation](#), TX

Aug 2024 – Present

- Partnered with Population Health, Health Informatics, and Compliance teams to define analytics requirements, enforce data privacy regulations, and enable secure access to 10M+ de-identified pharmacy and claims datasets across 100+ distribution networks.
- Engineered ETL pipelines using **SSIS, MongoDB, and Python scripts** to ingest, cleanse, and standardize data from pharmacy sales, inventory, and billing systems, achieving 98%+ data accuracy.
- Built machine learning models in **Python (Scikit-learn, Pandas, NumPy)** to forecast drug demand and optimize inventory allocation, delivering 85%+ accuracy for predictive stocking.
- Developed **Power BI** and **Advanced Excel (DAX)** dashboards to visualize KPIs on drug distribution, inventory levels, and sales trends, enabling drill-through analytics for operations and leadership.
- Integrated predictive outputs via **Alteryx, APIs, and JIRA** workflows to automate inventory alerts and replenishment planning, reducing stockouts by 30% and improving supply chain efficiency.
- Deployed classification models on **Azure Databricks** to segment products by demand patterns and integrated ServiceNow alerts for proactive supply chain interventions.
- Migrated sales, inventory, and distribution data from MySQL to **Azure SQL Data Warehouse** using **SSIS** and **Python ETL**, delivering unified, real-time data access for reporting and modeling.
- Utilized **Apache Spark (PySpark)** to perform distributed processing of multi-terabyte claims and distribution datasets, enabling near real-time analytics and improving reporting turnaround by 35%.

Data Analyst | L&T Infotech, India

June 2018 – July 2022

- Designed, developed, and maintained ETL pipelines using **Ab Initio**, processing millions of daily banking transactions with 99% reliability, ensuring accurate regulatory reporting, compliance, and timely data availability.
- Optimized ETL workflows and **Oracle SQL/PLSQL** procedures, reducing job execution time by 30%, enabling 20% higher data processing, and streamlining cross-system transformations for faster, reliable reporting.
- Automated server cleanup, log management, and file archival using **UNIX Shell Scripting**, saving over 20 hours per month, improving system uptime, reducing processing delays, and ensuring uninterrupted availability of ETL pipelines.
- Led a team of 4 analysts, gathering business requirements and managing **GitHub version control**, improving collaboration, enforcing code standards, and delivering ETL solutions on time while meeting business and compliance objectives.
- Developed interactive real-time **Tableau dashboards** to monitor ETL job performance, reduced downtime by 30%, enabled proactive error detection, and provided operational teams with actionable insights for faster decision-making.
- Performed advanced data analysis using **Excel (Pivot Tables, VBA, Macros)** on large datasets, identifying trends and anomalies, generating actionable reports, and supporting strategic business, operational, and compliance decisions.
- Provided end-to-end production support for ETL jobs, troubleshooting batch failures, validating data accuracy, maintaining a 92% data match rate, and ensuring smooth integration across multiple banking and marketing systems.

EDUCATION

Northeastern University	Boston, MA
Master of Science in Information Systems	Sept 2022 – Dec 2024
Thadomal Shahani College of Engineering	Mumbai, India
Bachelor of Engineering in Electronics and Telecommunication	Aug 2015 – Jun 2018

PROJECTS

- Brazil-E-Commerce-Data-Engineering-and-Analysis** | Azure Data Factory, Azure Blob Storage, Azure Cosmos DB (Document & Graph), Power Automate, Python, Gremlin API, Power BI
 - Automated data flow by integrating Power Automate with Azure Blob Storage, triggering file transfers from OneDrive, and ingesting them into Azure Data Factory for transformation, cleansing, and hierarchical structuring before storing in Azure Cosmos Document DB.
 - Combined and processed graph data using Azure Data Factory and Python, then ingested it into Azure Cosmos Graph DB via the Gremlin API by creating vertices and edges, enabling graph-based querying and analysis; final insights were visualized through Power BI dashboards.
- NYC Food Inspection Data Analysis** | Power BI, Tableau, SQL, Python, Data Warehousing (Fact/Dimension Tables)
 - Analyzed NYC Food Inspection Violations Open Data by performing extensive data cleaning to maintain the 5Cs of data warehousing (consistency, cleanliness, conformity, completeness, and currency); transformed and loaded data into Fact and Dimension tables to align with the System of Record.
 - Visualized actionable KPIs using Power BI and Tableau, highlighting trends in violation counts, inspection grades, and scores across NYC food establishments over time.
