PROFESSIONAL SUMMARY:

- A highly accomplished Java Full Stack Developer with over 6 years of expertise in designing, developing, and deploying scalable enterprise-grade applications.
- Adept at leveraging cutting-edge technologies, including Java, Spring Boot, Angular, React, and Microservices, to build high-performance and secure web applications.
- Demonstrates a strong foundation in software architecture, cloud integrations (AWS, Azure), DevOps practices, and CI/CD pipelines, ensuring seamless development and deployment workflows.
- Extensive experience in Software Development Life Cycle (SDLC)—analysis, architecture, design, implementation, testing, and deployment of web-based and distributed systems.
- Proficient in Angular, React.js, Redux, TypeScript, JavaScript (ES6+), Node.js, HTML5, CSS3, Bootstrap, and AJAX, ensuring dynamic and responsive user interfaces with optimized performance.
- Hands-on experience with AWS (EC2, S3, Lambda, RDS, API Gateway, DynamoDB), Azure, Kubernetes, Docker, and CI/CD pipelines using Jenkins, GitHub Actions, ensuring automated build, test, and deployment processes.
- Expertise in RESTful API and SOAP Web Services development using Spring Boot, Swagger, OpenAPI, API zGateway, and integrating OAuth2/JWT security mechanisms.
- Skilled in designing and optimizing relational and NoSQL databases, including PostgreSQL, MySQL, MongoDB, and utilizing Hibernate & JPA for efficient data access.
- Experience with Apache Tomcat, JBoss, WebLogic, IBM WebSphere, and implementing caching strategies with Redis, Memcached to enhance application performance.
- Strong advocate of Agile, Scrum, and DevOps methodologies, ensuring collaborative development, continuous improvement, and iterative software delivery with TDD/BDD practices.
- Expertise in Git, GitHub, Bitbucket, Jira, Confluence, Maven, and Gradle, ensuring seamless versioning, collaboration, and project management.

TECHNICAL SKILLS:

Languages	Java 17/11/8/7/6, PL/SQL, SQL, Kotlin,
Java/J2EE Technologies	Core Java, JSP, JDBC, JMS, Java Beans, Java Multithreading, Generics and Collections, EJB, Tiles
Web Technologies	HTML5, XML, XSLT, DOM, JSON, CSS3, JavaScript, XPath, AJAX, Angular React.JS, Node.JS
Cloud Environment	AWS
Methodologies	UML, Agile, Waterfall
Web Frameworks	Spring (IOC, MVC, Boot), Hibernate, Java GraphQL
Design & GUI Tools	Eclipse, IBM RAD
App servers	IBM Web Sphere, Apache Tomcat, BEA Web Logic
Databases/Tools	Oracle, SQL Server, MySQL
Operating Systems	Windows, Linux, UNIX

PROFESSIONAL EXPERIENCE:

Client: Goldman Sachs, Richardson TX

Jul 2024 – Till Date

Role: Java Full Stack Developer

Responsibilities:

- Led the end-to-end Software Development Life Cycle (SDLC), including system architecture design, functional requirement analysis, and development of scalable and high-performance applications.
- Optimized application performance by leveraging Java 17 features, such as Lambda expressions, Stream API, Completable Future, and Reactive Streams, to enhance parallel processing and bulk data operations.
- Architected and implemented Spring Boot microservices for RESTful APIs, ensuring high availability, scalability, and seamless integration with enterprise ecosystems.
- Developed Kotlin-based microservices with Spring Boot, leveraging coroutines and reactive programming to build highly concurrent, low-latency applications for real-time data processing.
- Migrated critical components from Java to Kotlin, reducing boilerplate code, improving code readability, and enhancing developer productivity while maintaining seamless interoperability with existing Java systems.
- Engineered enterprise-grade web applications using Angular, developing reusable components, directives, services, and advanced state management using RxJS and NgRx.
- Designed and deployed Spring Boot applications on AWS Cloud, utilizing AWS Lambda, EC2, S3, RDS, SNS, and CloudFormation for robust cloud-native solutions.
- Integrated Kafka-based event-driven architectures, handling real-time streaming and messaging for large-scale data processing, coupled with Apache Spark for real-time analytics.
- Developed highly efficient persistence layers using Hibernate ORM, JPA, and Spring Data, optimizing database transactions with caching, batch processing, and connection pooling.
- Built asynchronous and event-driven architectures using JMS (ActiveMQ, RabbitMQ) and message-driven beans (MDB) to ensure seamless inter-service communication.
- Ensured secure API development by implementing OAuth2, JWT authentication, and API Gateway security for microservices.
- Worked extensively with Docker and Kubernetes, containerizing microservices and orchestrating them efficiently for auto-scaling and load balancing.
- Designed and implemented GraphQL APIs for complex data models, reducing over-fetching and improving query performance by up to 40%.
- Integrated GraphQL APIs with microservices and legacy REST endpoints to enable seamless, unified data access across distributed systems.
- Implemented query batching, caching (using Redis/ Apollo Client), and pagination to enhance API responsiveness and scalability.
- Built **secure GraphQL endpoints** with **JWT/OAuth2 authentication**, role-based access control (RBAC), and API Gateway integrations.
- Developed **GraphQL subscriptions** using WebSockets to deliver real-time updates for event-driven applications.
- Configured CI/CD pipelines using Jenkins, GitHub Actions, and Terraform, streamlining automated builds, testing, and deployments in cloud-native environments.
- Implemented GraphQL APIs for optimized data fetching, reducing latency and enhancing user experience in client-server communication.
- Worked on MongoDB and PostgreSQL, designing schema patterns, indexing strategies, and replication mechanisms to ensure data consistency and performance optimization.
- Designed and implemented NoSQL-based solutions using MongoDB and Redis to handle high-velocity, high-volume data workloads.
- Developed unit and integration test cases using JUnit, Mockito, Cypress, and Jasmine/Karma to ensure application reliability and maintainability.
- Actively participated in Agile (Scrum/Kanban) development, leading sprint planning, backlog grooming, and retrospectives to enhance team productivity and software quality.
- Conducted code reviews, performance tuning, and best practice implementation, ensuring adherence to SOLID principles, clean code standards, and CI/CD best practices.

- Spearheaded troubleshooting and debugging using Splunk, ELK Stack, and Log4j, ensuring optimal system performance and high availability.

Environment: Java 17 | Java GraphQL | Spring Boot | Microservices | Kotlin | Docker | Jenkins | Kafka | AWS | MongoDB/NoSQL

Client: First Republic Bank, New York, NY

Jan 2024 – May 2024

Role: Full Stack Developer

Responsibilities:

- Spearheaded the end-to-end software development lifecycle (SDLC), encompassing requirement analysis, system design, and implementation of tailored solutions to meet business objectives.
- Engineered and optimized enterprise applications using Java 8, leveraging Lambda expressions, Streams API, and functional interfaces for enhanced code efficiency and performance.

- Designed and developed scalable, high-performance RESTful APIs and Microservices using Spring Boot, ensuring seamless integration and robust service orchestration.
- Architected Spring MVC-based web modules, implementing dynamic business logic and integrating Hibernate ORM for efficient data persistence and transaction management.
- Built highly interactive Single Page Applications (SPA) with Angular 8, enhancing user experience through modular component-based architecture, RxJS, and state management with NgRx.
- Implemented JMS-based messaging systems, utilizing Apache Kafka and RabbitMQ to enable real-time event-driven architecture.
- Developed and maintained SQL and NoSQL databases, including MongoDB, PostgreSQL, and MySQL, optimizing query performance and ensuring data integrity through efficient schema design and indexing.
- Designed and consumed SOAP and RESTful web services, implementing JAX-WS for seamless communication with third-party systems.
- Integrated Docker for containerized microservices deployment and leveraged AWS Cloud Services (EC2, S3, RDS, DynamoDB, IAM, SNS, SQS) for scalable and fault-tolerant cloud solutions.
- Established CI/CD pipelines using Jenkins, Git, and Maven, ensuring streamlined build automation, testing, and deployment processes.
- Utilized Log4J and ELK Stack (Elasticsearch, Logstash, Kibana) for comprehensive application logging and monitoring, enhancing system observability and troubleshooting efficiency.
- Conducted rigorous unit testing using JUnit and Mockito, implementing test-driven development (TDD) principles to ensure code reliability and maintainability.
- Employed Agile methodologies (Scrum, Kanban), collaborating cross-functionally to drive iterative development, sprint planning, and retrospective improvements.
- Implemented OAuth 2.0 and JWT-based authentication and authorization mechanisms to enhance security and ensure secure API access.
- Developed complex HTML5, CSS3, JavaScript, and Bootstrap front-end components, ensuring cross-browser compatibility and responsive UI design.
- Led code reviews, debugging, and performance tuning, ensuring best practices in coding standards, maintainability, and application scalability.

Environment: Java 8/11/17, Spring Boot, JavaScript, AWS, Docker, Jenkins, Git, MongoDB, SQL.

Company: Konstant Infosolutions, Rajasthan, India

March 2018 - Jul 2022

Role: Full Stack Developer

Responsibilities:

- Led the functional and technical design phases, collaborating with business stakeholders, testing teams, and developers to finalize functional definition documents and technical specifications.
- Engineered high-performance web applications leveraging Spring MVC to structure the business logic and enhance modularity.
- Designed and implemented RESTful Microservices using Spring Boot, reducing application complexity and improving scalability with minimal configuration.
- Architected and developed microservices-driven business components using Java/J2EE, ensuring seamless interaction with distributed systems.
- Developed and optimized Hibernate ORM mappings for database persistence, implementing Criteria API for dynamic and efficient data retrieval.
- Utilized Eclipse IDE extensively for development, debugging, integration, and deployment, streamlining the software development lifecycle.
- Designed and implemented responsive front-end applications using HTML5, CSS3, JavaScript, ensuring cross-browser compatibility and user engagement.
- Developed reusable Angular components and modules, customizing existing libraries to enhance application functionality and maintainability.

- Played a pivotal role in the design and development of AngularJS-based applications, enabling dynamic and interactive user experiences.
- Integrated Apache Kafka for real-time data streaming and event-driven architecture, ensuring scalability, fault tolerance, and real-time processing.
- Implemented Kafka Streams for advanced real-time analytics, enhancing data processing pipelines and monitoring solutions.
- Developed and parsed XML schemas using SAX and DOM parsers, facilitating seamless data exchange between heterogeneous systems.
- Leveraged Java Messaging Service (JMS) to configure and manage message queues and topics within the WebLogic application server, optimizing asynchronous communication.
- Deployed and managed Enterprise JavaBeans (EJBs) and other components within the JBoss Application Server, improving application performance and scalability.
- Integrated Log4J for robust error logging, debugging, and system monitoring, ensuring efficient issue tracking and resolution.
- Conducted comprehensive code reviews, implemented JUnit-based unit testing, and ensured adherence to best coding practices.
- Developed and consumed SOAP-based Web Services, facilitating large-scale XML data transmission over HTTP.
- Designed and optimized SQL queries for CRUD operations within SQL Server, ensuring data consistency and performance optimization.
- Developed and fine-tuned PL/SQL stored procedures, triggers, and views, enhancing database efficiency and business logic execution.
- Led unit testing, integration testing, debugging, and acceptance testing, ensuring application reliability, stability, and adherence to business requirements.

Environment: Java 8+, Spring Boot, Microservices, RESTful APIs, Angular, Kafka, SQL/PL-SQL, Agile.

Education

Master's in computer science

Eastern Illinois University, Illinois
