SUMMARY

Full Stack Java Developer with 5+ years of experience architecting scalable microservices handling daily transactions. Expert in Java/Spring Boot, React/TypeScript, Kafka event-driven systems, and Kubernetes deployments. Proficient in optimizing applications, implementing CI/CD automation, and delivering AI-powered solutions that reduce costs, improve system reliability, and accelerate feature delivery.

SKILLS

Methodologies: SDLC, Agile (Scrum/ Kanban), MVC Architecture, Microservices architecture

Programming Languages: Java (Java 8, Java 11), JavaScript (ES6+), TypeScript, HTML5/CSS3, SQL, Go

Front-end: React.js, Node.js, Vue.js, Angular, Next.js, CSS Frameworks, Bootstrap, Material-UI, Tailwind CSS, jQuery, AJAX, WebSockets

Back-end: Spring Framework (Spring Boot, Spring MVC, Spring Security), RESTful API, GraphQL, Apache Kafka, Hibernate, Microservices

Database Technologies: NoSQL, MySQL, PostgreSQL, MongoDB, OracleDB, Cassandra

Cloud Platforms & DevOps: AWS (EC2, S3, EBS, Lambda RDS, Elastic Load Balancing, ECS, CloudWatch, CloudFront), Azure, Docker, Kubernetes

Version Control & CI/CD pipelines: Git, GitHub, Jenkins, BitBucket

Web Servers & Application Servers: Apache Tomcat, Web sphere Application Server, BEA Web logic

Build Tools & IDEs: IntelliJ IDEA, Visual Studio code, Maven, Gradle

AI/ML Integration Tools: Azure OpenAI Service, AWS Bedrock, OpenAI API, Vector Databases

Testing Tools: JUnit, Mockito, Postman API

Soft Skills: Problem-solving, Collaboration with cross functional teams, Attention to detail, Strong verbal and written communication

EDUCATION

Master of Technology Industrial Technology | University of Central Missouri, Warrensburg, MO

May 2025

Bachelor of Technology in Computer Science Engineering | Jawaharlal Nehru Technological University, India

July 2019

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | Cardinal Health, Kansas

January 2025 - Current

- Architected event-driven microservices platform using **Java 17**, **Spring Boot**, **Apache Kafka**, and **RESTful APIs** processing 800K patient transactions daily, implementing fault-tolerant patterns achieving 99.9% system uptime for critical healthcare operations.
- Engineered **React.js** dashboard with **TypeScript**, **Redux Toolkit**, and **Axios** integrating real-time **WebSocket** connections for pharmacy inventory tracking, enabling 200 pharmacists to reduce medication fulfillment errors by 55% across hospital network.
- Optimized **PostgreSQL** database with **Hibernate** caching, connection pooling configurations, and query optimization techniques reducing healthcare analytics report generation from 12 seconds to 850 milliseconds improving clinical team decision-making speed.
- Developed AI-powered patient support chatbot using **Java**, **Spring Boot** and **Azure OpenAI Service** with retrieval-augmented generation answering 10K monthly medication queries, reducing call center volume by 38% and improving patient satisfaction scores.
- Deployed containerized applications on **Azure Kubernetes Service** using **Docker**, **Helm** charts, and **Azure DevOps CI/CD** pipelines with automated security scanning, reducing deployment cycle from 3 days to 4 hours enabling faster feature delivery.
- Implemented comprehensive testing strategy using **JUnit 5**, **Mockito**, and integration testing frameworks achieving 88% code coverage, preventing 52 production defects during patient billing module overhaul saving estimated \$180K in remediation costs.

Software Engineer | isoWhiz, India

September 2019 - August 2023

- Developed high-performance payment gateway using **Java 11**, **Spring Boot**, and **RabbitMQ** message broker handling 2.5M daily transactions for e-commerce platform, reducing payment processing latency improving checkout conversion.
- Built **GraphQL** API layer using **Apollo** and **Spring Boot** connecting 12 **REST** microservices, enabling mobile and web development teams to fetch data efficiently with single query reducing network overhead by 65% significantly.
- Designed **OAuth 2.0** authentication system using **Spring Security** and **JWT** tokens for multi-tenant SaaS platform serving 75K enterprise users across 35 countries, implementing role-based access control eliminating unauthorized access incidents completely.
- Constructed Progressive Web Application using **React**, **Next.js** server-side rendering, and **Service Workers** with offline capabilities delivering app-like experience on mobile browsers, increasing mobile user engagement by 58% and session duration significantly.
- Established **CI/CD** automation using **Jenkins**, **Docker** containerization, and automated testing pipelines with code quality gates, enabling 35 weekly production releases reducing deployment time from 4 hours to 25 minutes improving team productivity.
- Built ETL data pipeline using **Apache Spark** and **Python** processing 12 million customer records daily for business analytics, implementing data validation and transformation logic improving downstream reporting accuracy by 42% for marketing campaigns.

PROJECTS

CarCard: Developed Spring Boot REST APIs for an auto-dealership CRM system, ensuring reliable data synchronization. Implemented scheduled jobs for automated updates, improving operational efficiency. Built AWS Lambda serverless functions in Python integrating Plaid and Repay payment APIs, delivering secure, scalable third-party payment processing.

Privacy Leakage in Heterogeneous Networks: Designed a Novel Heterogeneous DE-Anonymization Scheme (NHDS) to detect privacy leakage across aggregated social networks. Reduced candidate sets using graph structures and profile features. Implemented in Python using NetworkX, Pandas, Scikit-learn, with PySyft and TensorFlow/PyTorch for privacy-preserving and deep-learning models.

Election Management System: Developed a secure Election Management System handling voter registration, ballot management, and result tracking. Built using Java, Servlets/JSP, JDBC, and Oracle for backend processing. Created interactive HTML and JavaScript front-end with real-time data tracking and robust database integration.
