Summary

- Over 4+ Years of experienced Data Analyst with a strong background in developing business dashboards, analyzing large datasets, and collaborating with cross-functional teams for requirement gathering. Proficient in advanced data analysis techniques using Python, SQL, Snowflake, Tableau, and Excel, focusing on applying statistics to inform decision-making. Leveraging four years of experience, specializing in navigating complex datasets, and demonstrating expertise in data extraction, manipulation, and visualization. Seeking a challenging role to apply my end-to-end data processing skills and drive innovation with impactful solutions.

Education

Masters from Kent State University - 2024

Bachelors from KKR & KSR INSTITUTE OF TECHNOLOGY AND SCIENCES - 2022

Technical Skills

Languages/Database: T-SQL, PL/SQL, R, Python, C, UNIX shell scripting, IBM DB2, Oracle DB, Snowflake

Ticketing Tools: Service Now, JIRA.

Visualization Tools: Excel, Tableau, Power BI

Cloud: AWS, RDS, Redshift, S3, EMR, Lambda, API gateway, CloudWatch

ML/Deep Learning: Regression, Classification, Clustering, Bagging and Boosting Algorithms, DNN, CNN, Attention and Transformer Models, NLP

Version Control tools: Git, SVN, CVS, CI/CD

Operating Systems: Windows, Linux, MacOS

Methodologies: Software Development Life Cycle, Agile, Waterfall, Data Modeling Logical/ Physical/ Dimensional, MS Project, SQL Profiler

Other Skills: Data Processing, Data Modeling, Data Reconciliation, Data Monitoring, Data Validation, Fraud Detection, Predictive Analytics, Claim Analysis, Risk Analysis, Customer Segmentation, Documentation and reporting

Experience

Wells Fargo

Aug 2024 – current

Data Analyst

Plano, Texas

- Administered the collection, analysis, and interpretation of large-scale banking datasets driving a 20% increase in cross-selling opportunities and \$1.2M in additional revenue.
- Incorporated Spark SQL and Databricks to automate the loading of data from AWS S3 to Snowflake tables, accelerating the process by 70% and enhancing overall data management efficiency.
- Formulated advanced SQL queries to calculate and analyze sales performance metrics, the outcome was a notable 15% increase in quarterly revenue and a significant 20% improvement in forecasting accuracy.
- Analyzed and interpreted vast banking operations and customer behavior data sets to identify cost-saving opportunities; reduced operational expenses by \$500k annually through targeted process optimizations.
- Implemented Tableau dashboards to track Data Lineage and Metadata, giving the business real-time visibility into data sources and dependencies, leading to a 40% reduction in data processing time.
- Orchestrated the implementation of Python scripts to facilitate the seamless transfer of metadata from S3 and Snowflake to EDM Reporting mart on Redshift, optimizing Tableau reporting for enhanced data analysis.
- Developed and deployed Python modules to extract and load asset data from MySQL source database, ensuring real-time data synchronization with downstream systems; increased data processing speed by 75% and eliminated data discrepancies.
- Spearheaded the identification and automation of manual data processes using SQL scripts, delivering a 30% decrease in data processing time and maximizing team efficiency.
- Engineered and executed automated capacity planning reports leveraging Python packages (NumPy, Pandas, Matplotlib); slashed manual report generation time by over 70% and fortified data accuracy for strategic decision-making.
- Steered SQL and Python scripts to perform comprehensive data validations, ensuring accuracy and consistency of metrics in Redshift, resulting in a 25% reduction in data discrepancies and fortified data integrity.
- Expertise in transforming business requirements into analytical models, designing algorithms, building models, developing data mining and reporting solutions that scale across a massive volume of structured and unstructured data.

- Executed all phases of the Software Development Life Cycle (SDLC) using methodologies like Agile and Waterfall.
- Created Python programs with manipulate arrays using Python libraries like NumPy, Pandas, and SciPy.
- Applied forward engineering approach for designing and creating databases for OLAP model.
- Implemented advanced web analytics tracking, monitored KPIs using Google Analytics, and devised Google Analytics reports and dashboards.
- Devised simple and complex jobs using Data Stage to load dimensions and fact tables as per STAR schema techniques.
- Identified, analyzed, and interpreted trends or patterns in intricate data sets and worked with management to prioritize business and information needs.
- Implemented Power BI power query to extract data from external sources and modify data to a certain format as required for consumption in the dashboards.
- Collaborated with cross-functional teams to develop and execute a data-driven approach to Policy Management, resulting in a 15% increase in policy compliance and risk mitigation.
- Addressed providers and Medicare and or Medicaid entities to validate the EDI transaction sets or internet portals.
- Gathered requirements and designed Use Cases, Use Case Diagrams, and Activity Diagrams using MS Visio.
- Orchestrated the integration of EMR/EHR systems with third-party software, optimizing interoperability and enabling seamless data exchange, leading to a 50% reduction in manual data entry efforts.
- Guided in Healthcare pre-sales initiatives for EHR applications.
- Skilled in performing data parsing, data manipulation, and data preparation with methods including describing data contents, computing descriptive statistics of data, regex, split and combine, Remap, merge, subset, melt, and reshape.

Certifications & Achievements

- Microsoft Azure Fundamentals AZ-900 Certification,
- Python certification from NPTEL
- Merit certificate in BEC (Business English Certification) by Cambridge.
