

DIVYA KANDIKATLA

Data Analyst

📞 937-603-3441 ✉️ divya.k@cvtechmail.com  LinkedIn

SUMMARY

Data Analyst with 2+ years of experience transforming complex datasets into actionable insights. Skilled in SQL, Python, and visualization tools to drive business decisions. Proficient in optimizing processes, reducing costs, and enhancing data quality through statistical analysis and ETL implementation. Collaborative problem-solver committed to delivering measurable improvements.

SKILLS

Methodologies: SDLC, Agile, Waterfall

Programming Languages: Python, SQL, R

Libraries: Pandas, NumPy, SciPy, Matplotlib, Seaborn

Database: Microsoft SQL Server, PostgreSQL, MySQL

Data Visualization Tools and Platforms: Tableau, Power BI, Advanced Excel

Statistical Analysis: A/B Testing, Predictive Analytics, Hypothesis Testing, Regression Analysis, Ad-hoc Analysis, Time Series Analysis

Cloud Platforms: AWS, Microsoft Azure, Snowflake

Version Control: Git, GitHub

Soft Skills: Critical thinking, Problem solving, Attention to detail, Strong written and verbal communication skills, Data storytelling, Collaboration with cross-functional team, Stakeholder management

EDUCATION

Master of Science in Computer Science | University of Dayton, Ohio

May 2025

Bachelor of Technology in Computer Science and Engineering | CMR College of Engineering and Technology, India

April 2023

PROFESSIONAL EXPERIENCE

Data Analyst | Humana, Ohio

November 2024 - Current

- Integrated and analyzed data from multiple healthcare systems, including claims processing and EHR databases, using SQL Server and Python ETL scripts, implementing data quality validation processes that ensured HIPAA compliance.
- Conducted cost prediction analysis for preventive care programs utilizing Python with Pandas and NumPy libraries, performing regression analysis that quantified ROI, resulting in \$1M annual savings and improved resource allocation.
- Collaborated with cross-functional teams using Agile methodology to optimize claims management, implementing robust ETL processes for data integration and transformation that improved patient data accuracy and reduced processing errors by 22%.
- Designed interactive Tableau visualizations connected to SQL Server data sources, incorporating A/B testing results and hypothesis testing to effectively communicate complex patient data to stakeholders for data-driven decision making.
- Enhanced data quality by refining dbt models in SQL Server to consolidate fragmented data sources, maintained version-controlled code in GitHub, which standardized data models and improved decision-making accuracy.

Data Analyst | Vivma Software Inc, India

January 2022 - August 2023

- Collected and analyzed data using SQL and Python (Pandas, NumPy) across software applications and PostgreSQL databases to identify user behavior patterns, improving feature adoption rates and informing strategic product development decisions.
- Developed comprehensive Power BI dashboards that translated complex usage metrics into actionable insights for stakeholders, reducing decision-making time by 40% while supporting Agile development cycles.
- Led user engagement analysis project using regression models and A/B testing methodologies, integrating data from APIs and application logs through custom ETL processes that increased new feature engagement.
- Implemented data quality validation protocols and data modeling best practices using Git version control for consistency, reducing data inconsistencies and establishing standardized procedures that improved analysis reliability.
- Collaborated cross-functionally with product teams on ad-hoc analysis requests, effectively communicating technical findings through statistical hypothesis testing that directly influenced product roadmap priorities within the SDLC framework.

PROJECTS

Hand Gesture Volume Controller: Developed a hand gesture volume controller integrating with system software to enable intuitive, precise volume adjustments. The application leverages computer vision and gesture recognition techniques, achieving 97% accuracy, thereby significantly enhancing user interaction, convenience, and accessibility across multiple devices effectively.

Heart Disease Prediction using Machine Learning: Developed a robust machine learning-based heart disease prediction system to automate early risk detection and alert patients. Employed multiple ML models, with Logistic Regression achieving the highest accuracy of 81.25%, thereby significantly mitigating risks associated with complex heart disease diagnostics.

Object detection using YOLO: Developed a YOLO-based deep learning model to accurately detect and classify essential household objects like cup, bowl, and jar from 300 images minimum 100 per object. Leveraged labeling for efficient YOLO formatting with an 80/20 train/test split, deployed on laptops/desktops, achieving high accuracy.

PUBLICATIONS

Segmentation of 3D Medical Images Using Transformers: Developed a 3D image segmentation method using convolutional neural networks that exploit large feature representations for highly effective performance. Acknowledging CNNs' limited receptive fields, the approach addresses long-range dependency challenges, consistently achieving robust segmentation accuracy in complex 3D imaging tasks.
