EDUCATION

New York University

M.S. Biomedical Informatics (concentration in Bioinformatics and Artificial Intelligence)

New York, New York

07/2024 - 06/2025

Arizona State University, Barrett, The Honors College

B.S. Biomedical Informatics; Minor: Biological Sciences; Certificate: Evolutionary Medicine

Tempe, Arizona

08/2019 - 05/2023

Skills: Programming: Python, SQL; Data Analysis & ML/AI: Machine Learning, SAS, R; Big Data & Real-Time Analytics: Hadoop, Hive, Kafka, Trino; Healthcare & Predictive Modeling: Risk Modeling, Healthcare Data Management; Operating Systems & Tools: Linux, Bash, Git, Docker; Data Visualization & BI Tools: Power BI, Tableau, Excel

RELEVANT COURSES

Programming for Data Analysis (*R*), Introduction to Programming (*Python*), Methods in Quantitative Biology (*Git, Github, Miniconda, Python*), Machine Learning (*Clustering, Dimension Reduction, Regression, Classification, Data Analysis, Tree-Based Methods, Support Vector Machines, Neural Networks, Large Language Models, Deep Learning*), Realtime Big Data Analytics (*Java, Hadoop, Hive, Kafka, Trino*), Healthcare Data Management (*SQL*), Evaluation Methods for Predictive Risk Models

PROFESSIONAL EXPERIENCE

Institute for Innovations in Medical Education, New York University

New York, New York

Research Intern - Machine Learning and Data Engineer

01/2025 - Present

- Developing machine learning models for blood clot prediction in patients by integrating structured EHR data with unstructured clinical notes. Used Logistic Regression and Random Forest for structured data, and using NLP for unstructured data to enhance detection accuracy.
- Evaluating models using AUC-ROC, sensitivity, and specificity, comparing structured and NLP-based approaches to enhance early VTE diagnosis beyond traditional risk scores (e.g., IMPROVE).

Western Alliance Bank

Phoenix, Arizona

Data Analyst Intern

06/2023 - 08/2023

- Orchestrated the migration of all project data from Excel to MySQL to meticulously map crucial information for cybersecurity assessment testing, significantly improving data integrity and saving the team 40+ hours per month.
- Spearheaded strategies that enhanced knowledge transfer processes among teams, specifically targeting 35 IT projects.

Mayo Clinic Radiology Department, Arizona State University

Scottsdale, Arizona

Research Data Analyst Intern

01/2022 - 05/2023

- Conducted analysis of 100+ brain scans using Horos software, enabling comprehensive visualization of the brain and tumors in diverse anatomical positions, using ROI Volumizer, contributing to the understanding of treatment efficacy.
- Derived trends from collected data, substantiating the success of the treatment. Demonstrated the positive trajectory in patient outcomes, by leveraging comprehensive analysis, affirming the efficacy of the implemented treatment.

Perelman School of Medicine, University of Pennsylvania¹

Philadelphia, Pennsylvania

Research Data Analyst Intern (Remote)

07/2020 - 08/2020

- Performed an extensive literature review, exploring diverse studies leveraging machine learning methodologies.
- Assisted in developing natural language processing systems to automate information extraction from social media and established guidelines for extracting, transferring, and loading data from 1000+ social media posts into a database.

INDEPENDENT PROJECTS

Healthcare Strategy - "Labcorp Pap Smear Process"

- Strategized a new methodology for the process of pap smear testing from specimen collection to diagnosis.
- Pitched a more accurate and cost effective method of analysis which is now undergoing the process of being implemented as the new standard of operation for pap smear testing at a Labcorp in Arizona.

Python - "Fitbit Tracker"

- Cleaned and analyzed Fitbit user data to assess daily calorie expenditure and activity levels, providing insights into the types of activities performed and the duration of each. (*Packages and libraries utilized: pandas, numpy, seaborn, matplotlib.pyplot, plotly.express, dash_core_components, dash_html_components, os, and plotly.graph_objects, scikit-learn*)

SQL - "Determining Factors in Predicting a Stroke"

- Cleaned and analyzed a dataset to investigate environmental and lifestyle factors influencing stroke risk.
- The analysis focused on variables such as gender, smoking habits, age, blood glucose levels, heart conditions, and employment types.
