## Education

**Missouri State University**, MS in Computer Science

**Concentrations:** Machine Learning, Deep Learning, Advanced Software Engineering, Software Testing Methodologies, Data Analytics, Introduction to AI, Data Mining.

**JNTUH**, BS in Computer Science

**Concentrations:** Data Structures and Algorithms, Data Mining, Engineering Mathematics, Object Oriented Programming (Java / C++).

## Technical Skills

**Programming & Development:** Python, Java, C++, SQL, JavaScript | React, Node.js, Flask | RESTful APIs, System Design, Agile/Scrum

**Data Science & Analytics:** Machine Learning, Predictive Modeling, NLP (TensorFlow, PySpark, NLTK, BERT) | Data Modeling, ETL Pipelines | Tableau, Power BI

**Cloud & DevOps:** Snowflake, AWS (S3, EC2, Lambda), Docker, Git, CI/CD (GitHub Actions), Salesforce

## Experience

**Data Analyst**, Protek Talent Inc

July 2025 – Present

- Built automated ETL pipelines using Snowflake + Python, reducing manual prep by 40% and improving data reliability.
- Created BI dashboards and governance policies, cutting review cycles from 2 weeks to 3 days and improving compliance.

**Software Developer**, Unitel Software

Jan 2023 – Nov 2023

- Developed scalable full-stack features (React, Node.js, PostgreSQL) by applying SOLID principles and MVC architecture; delivered maintainable, high-performance solutions through RESTful APIs with caching and error handling.
- Optimized deployment workflows using Docker and CI/CD (GitHub Actions), cutting release cycles significantly while ensuring consistency across environments and delivering production-ready features on schedule in Agile teams.

**Virtual Salesforce Developer Intern**, SmartInternz

March 2022 – Oct 2022

- Configured Salesforce Lightning components and customized page layouts under senior developer guidance, ensuring alignment with business requirements and enhancing user experience and operational efficiency.
- Supported data migration using Salesforce Data Loader, ensuring accurate transfer of 500+ records; debugged Apex triggers and validation rules, improving data integrity and platform reliability.

**Technical Writer Intern**, BoredProgrammers

Jan 2021 - Aug 2021

- Researched and authored 10+ in-depth technical articles on emerging trends in mobile development (e.g., Flutter, React Native) and modern programming languages such as Kotlin and Swift.
- Translated complex concepts—like AI integration in mobile apps and cross-platform development strategies—into accessible content for beginner to intermediate audiences, resulting in a 25% increase in blog engagement.

## Projects

**Hate Speech Detection on Social Media**

2024

- Developed and fine-tuned a BERT-based NLP model for hate speech detection, achieving an 89% F1 score using TensorFlow and NLTK.
- Scraped and pre-processed 50K+ tweets, applying advanced text normalization and addressing class imbalance with SMOTE to improve model generalization.
- Published research findings in a peer-reviewed AI ethics conference, contributing to ongoing discourse around responsible AI and bias mitigation in language models.

**Diabetes Prediction System Using Big Data and Machine Learning**

2023

- Built a UNIX-style OS with a scheduler, file system, text editor, and calculator
- Processed large-scale health datasets using PySpark and optimized feature selection for better performance.
- Deployed the model as a scalable web application using Flask and AWS EC2.

## Certifications

**IBM Data Analyst Professional Certificate**, IBM

**Data Science Graduate Certificate**, Missouri State University
