

DIVYA DARISI

divya.darisi@gmail.com | 248-982-9514 | Novi, MI | <https://www.linkedin.com/in/divya-darisi-483a6416/>

- Current **Data Science Graduate Student** with strong foundation in collecting, cleaning and analyzing large datasets to drive actionable business insights.
- Passionate about applying statistical modeling and data visualization to solve real-world problems especially in industries where innovation meets complexity.
- Strong programming background with a focus on data-driven problem-solving. Experienced in building analytical models, cleaning, transforming data and delivering data-driven recommendations.
- I excel in dynamic environments where solving problems requires both analytical precision and imaginative thinking which involve not just writing code but crafting smart solutions.

EDUCATION

- Pursuing Masters in Data Science University of Pittsburgh, Pittsburgh, USA with current CGPA: 4.0.
- Completed Bachelors in Information Technology from Jawaharlal Nehru Technological University, Hyderabad, INDIA with CGPA: 3.78.

SKILLS

Programming Languages	Python (NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn, SciPy, PyMySQL, PyMongo, JSON), Java, JavaScript, VB Script
IDEs/environments	Jupyter Notebook, PyCharm, VS Code, Eclipse
Databases	MySQL, Oracle, MongoDB
Data Visualization Tools	Tableau, Excel, Power BI, Canva
Regression Analysis	Linear, Logistic
Segmentation and Clustering	K-Means, Hierarchical, DBSCAN
Methodologies	Agile, Scrum Process, Waterfall, Kanban
Project Management Tools	JIRA, Confluence
Machine Learning Skills	Supervised Learning, Unsupervised Learning
APIs and Frameworks	Restful API, Flask

EXPERIENCE

Wislogix Consulting

May 2025 – Aug 2025

Data Analyst Intern

Project: Voter Engagement Optimization

This project deals with preparing for upcoming client campaigns, conducting an internal data-driven initiative to simulate and optimize voter outreach strategies. Using publicly available voter data from past, for analyzing voter engagement trends across different demographics and geographies.

Responsibilities:

- Collecting and cleaning voter turnout data from different years, merging with Census demographic data to support analysis.
- Performing exploratory data analysis and evaluating changes in voter behavior over multiple election cycles.
- Building dashboards in Tableau to visualize voter turnout by county, age group, and party registration.
- Recommending targeted SMS and phone communication strategies to maximize contact rates in underperforming districts.
- Identifying top areas with the greatest potential for voter engagement improvement based on demographic responsiveness.
- Providing a reusable analysis pipeline to support rapid onboarding of future client datasets.
- Enhancing internal strategy templates to guide campaign planning for new political clients.

Technology Stack: Python (Pandas, Matplotlib, Seaborn), SQL, Excel, Tableau

ACADEMIC PROJECTS

Spotify Song Data Analysis

This project involved analyzing large dataset of Spotify tracks and uncover patterns in song popularity, genre trends, and feature correlations using exploratory data analysis and predictive modeling. The objective was to explore how musical attributes influence a song's success on the platform. The analysis provided data-driven insights into what makes a song popular.

- Cleaned and preprocessed the dataset using Python for accurate and consistent analysis.
- Analyzed the Spotify song data by conducting Exploratory Data Analysis to identify any patterns and insights.
- Built correlation heatmaps, scatter plots, and violin plots using seaborn and matplotlib to visually interpret patterns.
- Performed clustering (K-Means) to group songs based on different profiles.
- Developed predictive models based on the analysis and evaluated the performance of each model using model performance metrics to determine the most effective one.
- Built interactive dashboards in Tableau to present insights including popular genres, artists, etc.
- Documented all findings in a Jupyter Notebook and presented conclusions with supporting visuals and interpretations.

Migrating Relational Data from MySQL to MongoDB

This project aimed to migrate structured data from a relational database (MySQL) to a document-oriented NoSQL database (MongoDB) to explore schema flexibility, improve data retrieval speed, and support scalable application development. The project included schema design transformation, data extraction and conversion, and validation between both databases.

- Analyzed MySQL schema (tables, foreign keys) and designed equivalent MongoDB document models using embedded and referenced documents.
- Developed Python scripts using PyMySQL and PyMongo to extract data from MySQL, transform it into JSON format, and insert it into MongoDB collections.
- Handled one-to-many and many-to-many relationships by restructuring normalized MySQL tables into embedded or linked MongoDB documents.
- Implemented ETL (Extract, Transform, Load) pipeline with error handling, logging, and batch processing for large data migration.
- Conducted data integrity checks and cross-validated sample records between both databases to ensure migration accuracy.
- Documented all migration steps, challenges, and schema design decisions for academic evaluation and reproducibility.

CERTIFICATIONS & BADGES

- Tableau A-Z: Hands-On Tableau Training for Data Science - Credential ID: UC-d4ad5965-d5b4-4b63-8517-61e0e4fcd868
- AI powered Data Analysis: A practical introduction - Credential ID: UO1OLCZKV7SR
- Scrum Fundamentals Certified (SFC) - Credential ID: 1076163
- Scrum for Ops and DevOps Fundamentals Certified - Credential ID: 1014320
- Six Sigma Yellow Belt - Credential ID: 906799
- Get the most out of Confluence badge
- Get the most out of Jira badge
- Collaborate Effectively with Jira and Confluence together
- Deloitte Australia - Data Analytics Job Simulation - Credential ID: oqD3Za6BJuMXEEhjh
- Create Your First Web App with Python and Flask - Credential ID: VTWIGX2J7YO7
- Introduction to Flask Framework - Credential ID: S1XSPL0MXBZQ
- Business Analysis Fundamentals with AI Certified - Credential ID: 1092327
- Kanban Essentials with AI Certified - Credential ID: 1095157
- OKR Fundamentals with AI Certified - Credential ID: 1096218
- Chatgpt & AI Fundamentals - Credential ID: WL25052
