SUMMARY

Master's student in Data Science graduating Dec 2025, with 3+ years of professional experience in Salesforce development and a recent internship in machine learning and data engineering. Skilled in Python, cloud platforms, and Salesforce, with a track record of improving model performance and automating workflows.

WORK EXPERIENCE

Data Science Intern, HelixIntel, New York

May 2025 - Aug 2025

- Audited and streamlined Salesforce architecture, removing 500+ custom fields and 300+ obsolete reports, dashboards, and flows to reduce model complexity.
- Built a web scraping pipeline with SerpAPI and Groq-hosted LLaMA LLM to extract structured demographic and firmographic data from unstructured sources.
- Improved lead-scoring model accuracy by 22% through feature engineering and hyperparameter tuning, and integrated real-time probability scores into Salesforce to enhance sales outreach.

Application Development Analyst, Accenture, India

Sep 2022 - Jul 2024

- Developed dynamic Lightning Web Components using MVC architecture and design patterns to support scalable UIs
- Delivered low-code/no-code business solutions with OmniScripts, FlexCards, and Integration Procedures
- Orchestrated integrations between Salesforce and external platforms via RESTful APIs
- Streamlined CI/CD pipelines using Copado for robust version control and zero-downtime deployments

Application Development Associate, Accenture, India

May 2021 - Sep 2022

- Configured and managed EPC and Vlocity CPQ with complex hierarchies, calculated fields, and pricing logic
- Migrated outdated Vlocity templates to OmniStudio FlexCards, improving performance and maintainability
- Developed and optimized Apex classes, triggers, and orchestration flows for quoting workflows
- Built and enhanced Order Management flows using Integration Procedures, DataRaptors, and OmniStudio Orchestration

PROJECTS

Heart Disease Risk Prediction

- Normalized dataset into 5 relational tables in SQLite and trained models (Logistic Regression, Random Forest, SVM), achieving 92% F1 score
- Exported best model as .joblib and deployed via FastAPI + Docker on Google Cloud, scaling to 1000+ requests/hour
- Built a Streamlit app to provide real-time predictions with an intuitive UI

Prediction of Diseases from Chest X-ray Images

- Processed X-ray images and metadata, integrating image vectors and multi-label annotations
- Extracted features with ResNet50, trained DenseNet-based model (93% accuracy) using ReLU and sigmoid activations
- Converted probability outputs into binary vectors for final classification

AI-Powered Note-Taking App (Hackathon Project)

- Built a dual-editor real-time note system (React + FastAPI) that calls Gemini API on the last ≤ 100 words of typed notes, streaming completions with a $\geq 90\%$ confidence gate and reject-only UX.
- Implemented retrieval-augmented generation (RAG) using lecture slides and embeddings (FAISS/Pinecone) to ground completions, with top-k context retrieval and performance metrics.
- Added productivity features including hierarchical subject $\rightarrow$ lecture storage, multi-format export (PDF/DOCX/Markdown), and smart suggestions that convert notes into calendar reminders and action items.

EDUCATION

Aug 2024 - Dec 2025 **M.S. in Data Science**, University at Buffalo, SUNY at Buffalo

GPA: 3.45/4.00

Jul 2017 - May 2021 **B.E. in Electronics & Computer Science**, KIIT University, India

GPA: 7.73/10.00

SKILLS

- **Programming:** Python (Pandas, Sklearn, PyTorch), R, MATLAB, Apex, JavaScript (HTML/CSS)
- **Cloud Platforms:** AWS (S3, Lambda, Redshift, EC2), GCP
- **Data/Analytics:** SQL (SQLite, PostgreSQL), Excel, Power BI, Tableau
- **Salesforce:** Lightning Web Components, OmniStudio, Vlocity EPC/OM/CPQ
- **Machine Learning:** Supervised/Unsupervised, Deep Learning, NLP, MLflow
- **DevOps/Tools:** Git, Jenkins, Copado, Jira, Docker, FastAPI, Streamlit
