

HARISH KUMAR SADASIVAM

sadasivamharishkumar@gmail.com | +1 (972)-654-0333 | [My LinkedIn](#)

SUMMARY

Recent graduate and data-focused healthcare professional with strong foundations in clinical data management, quality assurance, and reporting. Skilled in data cleaning, entry, and validation, with working knowledge of SQL, Excel, and visualization tools. Committed to delivering accurate, actionable data that supports clinical decision-making and improves patient outcomes.

EDUCATION

Indiana University, Luddy School of Informatics, Computing, & Engineering	May 2025
Master of Science in Health Informatics CGPA: 3.80/4.00	
Rajiv Gandhi University of Health Sciences	Aug 2021
Doctor of Pharmacy (PharmD) CGPA: 3.68/4.00	

WORK EXPERIENCE

GTechnologies Pty Ltd.	Aug 2024 – May 2025
Healthcare Data Analyst	
- Built a web-based EMR system that improved clinical data accessibility by 60%, by integrating MySQL, React.js, and Node.js for seamless front-end and back-end interaction. - Standardized clinical records across departments by developing patient registration and pathology forms using ICD-11 coding, leading to a 40% improvement in documentation accuracy. - Enhanced system efficiency by 50% by optimizing search functionality and resolving integration issues across EMR modules.	
Indiana University, IU BioHealth Informatics Research Centre	Sept 2023 – May 2024
Research Data Analyst	
- Designed a global health informatics database using SQL and Excel, increasing coverage of condition-specific data points by 45%. - Improved data processing time by 50% and accuracy by 30% by extracting, cleaning, and managing a dataset of over million records using SQL. - Strengthened departmental partnerships through professional communication and data services, contributing to a 20% rise in collaborative reporting outcomes.	
The Oxford Medical College, Hospital and Research Centre	July 2021 - Sept 2022
Clinical Data Analyst	
- Streamlined clinical operations by creating SQL-driven reports on patient care workflows, improving task completion time by 25%. - Supported strategic product development by aligning workflow enhancements with hospital objectives, boosting system adoption across three departments. - Increased visualization clarity for clinical pathways by 50% by designing process maps in Draw.io and organizing data with Excel.	

ACADEMIC PROJECTS

Relation between Healthcare Factors and Health Outcomes Python, SQL	
• Analyzed global healthcare datasets using Python and SQL, identifying key trends and disparities that contributed to 20% more accurate health outcome predictions. • Discovered significant correlations between healthcare cost, access, and patient outcomes, providing data-driven insights for potential policy improvements. • Delivered actionable findings through effective project tracking, overcoming data inconsistencies and improving analytical efficiency by 30%.	
Clinical Data Analysis of Hospital Readmissions and Patient Outcomes	
• Reduced data processing time by 40% by analyzing over 1 million hospital admission records using SQL joins, Python, and Excel, enabling faster insights into patient outcomes. • Identified key clinical risk factors contributing to readmissions by extracting and visualizing diagnosis and medications taken. • Improved stakeholder decision-making by building a dynamic Excel dashboard summarizing readmission trends, length of stay, and at-risk patient profiles.	

SKILLS

Visualization: Tableau, Power BI
Languages & Tools: Excel, Python, SQL, R, Jupyter, MySQL Workbench
Healthcare Standards: ICD-11, HL7, SNOMED CT, LOINC, RxNorm
Concepts: EHR Management, Interoperability, Data Quality, Data Cleaning, Validation, Entry
Healthcare Concepts: Clinical Terminology, EMR Systems, Quality Metrics
Soft Skills: Problem Solving, Team Collaboration, Communication, Attention to Detail
