

RAJ KUMAR DONDAPATI

Data Analyst / Healthcare Informatics

+1 608-676-7266 | rajkumardondapati27@gmail.com | [LinkedIn](#) | Milwaukee, WI

PROFESSIONAL SUMMARY

4+ years of total hands-on experience in healthcare data analysis, clinical informatics, and medication management. Skilled in transforming complex clinical data (**EHR, claims, PDMP**) into actionable insights using **Python (Pandas, NumPy)**, **R (Tidyverse, ggplot2)**, **SQL**, and **visualization tools (Tableau, Power BI)**. Proven ability to optimize drug utilization reviews (DUR), ensure HIPAA compliance, and streamline workflows within **Epic, Cerner, and Allscripts** environments. Combines technical expertise in **advanced analytics, database management (SQL Server, MySQL), and Excel (PivotTables, VLOOKUP)** with deep clinical knowledge to support data-driven decision-making in healthcare operations. Adept at collaborating with cross-functional teams to improve patient outcomes, reduce costs, and enhance reporting accuracy.

WORK EXPERIENCE

Data Analyst

United HealthCare Group, Illinois – USA

September 2024 – Present

- Analyzing patient readmission trends by extracting and cleaning EHR data from Epic systems; collaborating with care management teams to identify top 5 chronic conditions contributing to early readmissions.
- Building patient segmentation models using Python and SQL to group patients based on risk scores, demographics, and medical history — helping clinical teams prioritize care coordination efforts.
- Collaborating with clinical operations and product teams to track the effectiveness of post-discharge follow-up programs using Power BI dashboards, leading to a measurable drop in 30-day readmission rates.
- Conducting weekly data validation between EHR entries and claims data to identify mismatches and improve billing accuracy across three key provider networks.
- Supporting care quality improvement initiatives by analyzing preventive screening gaps (e.g., colonoscopy, mammogram rates) and flagging patient cohorts for outreach — contributing to a 10% improvement in compliance.
- Integrating data from multiple systems (EHR, call Centre CRM, and telehealth platforms) to generate centralized reports on patient engagement and care outcomes, enabling better planning for care campaigns.
- Working directly with business stakeholders, including clinical leads and product managers, to define data requirements for regulatory reporting (HEDIS, STARS) and ensure timely submissions.
- Documenting workflows, data dictionaries, and logic for key clinical metrics to support internal audits and new analyst onboarding.

Physician Assistant, Andhra Pradesh - India

Prashanth Hospital (Advanced Urology and Robotic Surgery).

September 2022-July 2023

- Led the optimization of EHR workflows, improving provider efficiency and reducing documentation time by 20%.
- Managed the implementation of clinical decision support (CDS) tools, ensuring compliance with evidence-based guidelines.
- Performed regular audits of patient records to identify minor documentation gaps and ensure accuracy.
- Conducted thorough chart reviews and ensured accurate ICD-10-CM coding and documentation for admissions, discharges, and Medicare-related records in compliance with CMS guidelines.
- Collaborated with multidisciplinary teams to streamline the admission and discharge process, developing standardized checklists that improved documentation completeness and enhanced patient care coordination.

Clinical Data Analyst

IVR Techno Soft, Jaipur – INDIA

January 2020 – July 2022

- Dug into messy EHR datasets (patient demographics, lab results, pharmacy claims) to find patterns—like why certain clinics had higher readmission rates. Spoiler: Often missed follow-up appointments.
- Built Python scripts (Pandas + SciPy) to predict which patients were likely to bounce back post-discharge. Accuracy hovered around 80%—good enough for nurses to flag high-risk cases early.
- Helped IT merge Allscripts EMR data with external pharmacy records. Took forever because of mismatched patient IDs.
- Spotted a 15% error rate in how front-desk staff entered patient allergies into Epic. Pushed for dropdown menus instead of free-text fields—errors dropped to under 5%.
- Convinced leadership to let me build Power BI dashboards for ops teams. Now they track real-time bed occupancy instead of waiting for end-of-month reports.
- Ran weekly troubleshooting sessions for the team on SQL queries (why that JOIN failed) and Excel tricks (VLOOKUPS vs. XLOOKUPS).
- Trained new hires and junior analysts on how to pull reports from Epic and Cerner, especially for medication adherence and DUR (Drug Utilization Review) cut down their "Where's this data?" questions by half in 3 months.
- Ensured HIPAA compliance across clinical datasets by implementing role-based access controls (RBAC) in EHR systems (Epic, Cerner), reducing unauthorized access incidents by 40%.

EDUCATION

Master of Science in Healthcare Informatics | University of Wisconsin Milwaukee - Milwaukee, WI

Bachelors in Doctor of Pharmacy (Pharm-D) | K.V.S.R. Siddhartha College of Pharmaceutical Sciences Andhra Pradesh, INDIA

CORE COMPETENCIES

Programming & Data Visualization: Python (Pandas, NumPy, SciPy), R (Tidy verse, ggplot2), Tableau, Power BI, Matplotlib/Seaborn

Databases & Querying: SQL (MySQL, Microsoft SQL Server)

Microsoft Office & Version Control: Git & GitHub, Advanced Excel (PivotTables, VLOOKUP), PowerPoint

Healthcare-specific tools & Domain Knowledge: Epic, Cerner, Allscripts Healthcare Open MRS, HIPAA & HITECH rules, SSMS

Clinical Expertise: Clinical Data Interpretation (DUR, EHR, Claims Data, PDMP) Medication Management, Optimization

& Dispensing, Drug Utilization Review

ACADEMIC PROJECTS

Ecological Perspectives on Hypertension in the United States

- A Comprehensive Literature Review, Orchestrated and synthesized a multidisciplinary review and led the team in evaluating factors at individual, interpersonal, community, organizational, and policy levels to enhance understanding and mitigation strategies., 2023.
- Conducted statistical analysis using data visualization tools like Tableau and Python to identify key trends across demographic groups.
- Developed actionable recommendations based on ecological frameworks to mitigate hypertension risk at community and organizational levels.

Investigating the Influence of Illness Perception on Medication Adherence in Hypertension Patients

- Directed the study exploring the influence of illness perception on medication adherence in hypertension patients, guiding team collaboration, methodology design, and successful project execution., 2021.
- The project indicates strengthening the illness perception to improve medication adherence seems to be an important therapeutic strategy in educational interventions.
- Administered a questionnaire to patients with hypertension to assess their illness perception and medication adherence.
- Analyzed the data collected from the questionnaire to identify any correlations between illness perception and medication adherence.
- Designed and distributed structured surveys to collect patient-reported data on illness perception and medication adherence.
- Applied regression analysis techniques to quantify the impact of psychological factors on adherence behavior, presenting findings in a detailed report.

Epitope Based Peptide Vaccine Design and Target Site Depiction

- Innovative approaches to designing vaccines using specific epitopes derived from pathogens, focusing on optimizing peptide sequences for targeted immune responses.
- Explores advanced computational methods and tools for predicting potential epitopes, enhancing the precision of vaccine design by ensuring that selected peptides can effectively bind to major histocompatibility complex (MHC) molecules, thereby stimulating robust immune responses.,2023.
- Utilized bioinformatics tools like BLAST and PyMOL for sequence analysis and 3D protein structure visualization to identify potential vaccine targets.
- Conducted molecular docking studies to validate the binding affinity of selected epitopes with MHC molecules, ensuring robust immune responses.

CERTIFICATION

Certified in Heart saver Pediatric First Aid CPR AED by the American Heart Association

(valid until 06/2026)

- CITI PROGRAM
- Basic Introduction to Bio Safety
- IRB-Biomedical and Social & Behavioral Combined Researchers
- OSHA Bloodborne Pathogens
- Responsible Conduct of Research Training

REGISTERED PHARMACIST

- **Certified as Registered Pharmacist U/S 32(2) of The Pharmacy Act,1948 (IPC).**

May 2023-Dec 2027
