

DURGESH TIWARI

FULL STACK DEVELOPER

IN, USA | (551) 298-3936 | durgeshtiw098@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

- Accomplished Full Stack Developer with 3+ years of experience designing, developing, testing, and maintaining scalable web and mobile applications in e-commerce, finance, and enterprise SaaS domains.
- Proficient in backend development using **Python (Django, Flask)** and **Java (Spring Boot, Hibernate)** to build secure, high-performance RESTful APIs and microservices, reducing system response times by up to 30%.
- Skilled in frontend development with **React.js, Redux, TypeScript, HTML5, CSS3, Bootstrap, and Material-UI**, enhancing UI responsiveness and lowering defect rates by 25%.
- Experienced in database design and optimization with **MySQL, Azure SQL, MongoDB, and Redis**, including stored procedure creation, query tuning, and ensuring ACID compliance.
- Hands-on expertise in cloud deployment on **AWS (EC2, S3, Lambda)** and **Azure (App Services, AKS)**, with CI/CD automation using **Jenkins, GitHub Actions, Docker, Kubernetes, and SonarQube**, accelerating delivery cycles by 70%.

TECHNICAL SKILLS

Programming Languages:	Java (OOP, Lambda Expressions, Streams), JavaScript (ES6+), TypeScript, SQL, Python (Django, Flask, Pandas, NumPy),
Frameworks:	Spring Boot, Hibernate, Django, Flask, React.js, React Native, Next.js, Node.js, Express.js, Jest, Enzyme, Redux, React Hooks
Web Technologies:	HTML5, CSS3, SASS, Bootstrap, AJAX, jQuery, XML, JSON, Material-UI
Database:	MySQL, Azure SQL, MongoDB, Firebase, SQL Server
Cloud Platforms:	Azure, AWS (Lambda, EC2, S3), Google Cloud Platform
IDEs:	Visual Studio Code, PyCharm, Jupyter Notebook
Web/Application Servers:	Oracle WebLogic, IBM WebSphere, Apache Tomcat, JBoss
Testing Tools:	JUnit, Mockito, Selenium
Build/ Other Tools:	Maven, Gradle, ANT, Jenkins, Docker, Kubernetes, Postman, Jira, SonarQube, Kafka, Hadoop, Spark, gRPC, AWS Lambda, Data Mining, Unit Testing, Integration Testing, End-to-End Testing, Distributed Systems, Root Cause Analysis, Risk Management, Appstore, Play Store
Methodologies:	SDLC, Agile (SCRUM), Waterfall
Version Control:	Git, GitHub, SVN, Bitbucket
Gen AI Skills	Prompt Engineering, ChatGPT, OpenAI API, Text Summarization, Chatbot Design, RAG, Vector DB Concepts, GenAI UI Integration.
Operating System:	Windows, Linux, Mac OS

PROFESSIONAL EXPERIENCE

Full Stack Developer Bank of America IN, USA	Aug 2024 - Present
- Developed responsive, type-safe web interfaces using React.js, HTML5, and CSS3, delivering scalable components and interactive dashboards for seamless navigation and superior user experience across devices. - Built investor portfolio management and claim tracking modules with Redux Toolkit and Context API, improving synchronization accuracy and reducing UI errors by 40% through structured state-driven rendering. - Integrated RESTful APIs into React components for onboarding, portfolio updates, and disbursement tracking, enabling asynchronous communication, faster transaction processing, and reducing response time by 25% across dashboards. - Designed RESTful APIs with Spring Boot and Flask for registration, portfolio retrieval, claim processing, and transaction reporting, providing modular endpoints with consistent contracts for seamless integration. - Implemented JWT authentication with Spring Security, creating secure, stateless login sessions, reducing login latency by 30% and strengthening security by 40% through robust token validation and role-based authorization. - Applied Hibernate ORM with JPA for MySQL persistence, boosting query execution by 40% and accelerating development by 25% through caching, lazy loading, and automated SQL generation for scalable backend operations. - Leveraged Java concurrency utilities with ExecutorService and Python Celery workers to process simultaneous investor claim submissions, ensuring transaction consistency and preventing race conditions	

during high-volume operations.

- Automated API testing using **Postman collections** and deployed on **Azure App Services, Azure SQL, and Kafka pipelines**, following Infrastructure-as-Code standards to ensure scalability, reliability, and faster release cycles.
- Collaborated in **Agile ceremonies**, including sprint planning, backlog grooming, and daily standups, partnering with developers, testers, and product owners to deliver prioritized features and maintain product quality.

Full Stack Developer | Capgemini | India

Mar 2021 -Jul 2023

- Spearheaded the design and development of a modular loyalty and rewards platform using **Django, Python 3.10, SQLAlchemy, and PostgreSQL**, streamlining point accrual, redemption workflows, and partner settlement modules.
- Developed highly available **RESTful APIs** with **Django REST Framework** and **OAuth 2.0** to enable secure point transactions, balance updates, and real-time redemption notifications across retail channels.
- Built type-safe, reusable frontend components in **TypeScript**, leveraging interfaces, generics, and strong typing to minimize runtime errors and enhance maintainability of complex loyalty dashboards.
- Implemented responsive, accessible UI with **Tailwind CSS** and **Material-UI**, integrating real-time API calls for seamless reward claims, tier upgrades, and redemption workflows across web and mobile.
- Engineered dynamic reward claim and tier upgrade forms using **React.js**, integrating with backend APIs via **AJAX** to deliver real-time validations, recommendations, and a seamless UI for 25,000+ users.
- Implemented **Redis caching** for frequent data retrieval tasks (e.g., loyalty tier lookups, user history, redemption eligibility), reducing response latency across UI and API endpoints.
- Built **AWS Lambda** functions with **Python** for reward rule evaluations, cashback calculations, and transactional archiving, integrating **Amazon SQS, CloudWatch Events**, and **AWS Batch jobs**.
- Deployed containerized microservices via **Docker and Kubernetes**, enabling horizontal scalability, version isolation, and rapid failover for rewards services.
- Wrote comprehensive **PyTest** and **Unit test** unit/integration tests for workflows like reward eligibility checks, redemption validation, and benefit issuance, achieving high coverage and reliability.
- Integrated **SSL/TLS** encryption and input sanitization to protect PII and transaction data, ensuring compliance with PCI-DSS and ISO 27001 standards.
- Created Kubernetes-based monitoring dashboards to track resource utilization, **AWS Lambda** executions, SQS queue lengths, and API health, enabling proactive fault detection and load optimization.
- Integrated GenAI features, including **Prompt Engineering, ChatGPT API** and **Text Summarization** enhancing user guidance, automated recommendations, and customer engagement across the rewards platform.

EDUCATION

Master of Science in Data Science: Indiana University Bloomington, Indiana, USA

Bachelor of Technology in Information Technology: University of Mumbai, Kandivali Mumbai, India

PROJECTS

GenAI-Powered Legal Document Assistant | Java, Spring Boot, Flask, React.js, OpenAI API, MongoDB, PostgreSQL, LangChain, Git

- Developed a responsive **React.js frontend integrated with Spring Boot and Flask backend**, enabling users to upload legal documents and receive AI-generated summaries via the OpenAI API, enhancing comprehension for non-legal audiences.
- Implemented modular API connectors with **LangChain, OpenAI API, and Python-based FastAPI endpoints** to allow clause-level queries, delivering contextual, real-time answers for faster decision-making.
- Designed and integrated **MongoDB and PostgreSQL schemas** to securely store document metadata, user queries, and AI responses, ensuring high-speed lookups and audit-ready traceability.
- Managed version control using **Git and GitHub Actions**, and configured CI/CD pipelines to automate builds, testing, and stable deployments across frontend and backend microservices.
