WORK EXPERIENCE

Data Scientist

Stirista

📅 November 2023 - April 2025

📍 San Antonio, TX

- Trained, tested, tuned, compared and deployed classification 'Propensity To Buy' models (Logistic, XGBoost and Random Forest) based on known customer activity. Applied K-means clustering to build segments as an input. Segmentation approach improved model's metrics by ~20%.
- Trained, tested and deployed Recommendations engine using Collaborative Filtering and Reduced SVD algorithms for major client. Built automated program to run model on schedule, recommending items to customers based on available historical data.
- Implemented various Time Series Forecasting techniques (ARIMA, SARIMA, Error-Trend-Seasonality models) to predict seasonal revenues for a major client. The model replaced a manual heuristic revenue prediction process.
- Worked with Google Cloud Platform (Big Query) to pull data samples for modeling.
- Researched using Neural Networks (TensorFlow / Keras) for recommendations and comparisons with Reduced SVD algorithms.

Data Analyst, Marketing

Stirista

📅 April 2023 - November 2023

📍 San Antonio, TX

- Extracted, cleaned and transformed data from relational databases (on-prem/cloud) for exploratory data analysis and modeling.
- Built, cross-validated and tested multivariate regression models; performed A/B testing to assess the results.
- Applied unsupervised learning methods (PCA, K-means clustering) to extract insights from the raw data.

Data Analyst

Customer Portfolios (acquired by Stirista)

📅 November 2022 - April 2023

📍 Boston, MA

- Extracted data from MS SQL databases and performed exploratory data analysis and visualizations using various tools (pandas, matplotlib, seaborn, ggplot2, Tableau).
- Performed feature selection/engineering, trained, tested, cross-validated and deployed Linear Regression models.

Data Analyst

Ubertal Inc. (remote contract with Realtor.com)

📅 March 2022 - February 2023

📍 San Mateo, CA

- From multiple sources/databases (e.g., Greenhouse, Google Sheets/Excel), used Python and Pandas to clean, merge, and process data, then stored results in the cloud. Presented data via Tableau dashboards.

EDUCATION

Harvard University Extension School

Graduate Certificate, Data Science

June 2025 - Present

Graduate Certificate, Data Analytics
2021 ([CeDid](#): 21XL-BXBO-EVAS)

Graduate Certificate, RE Investment
2021 ([CeDid](#): 21B7-FEBU-EAAL)

Azerbaijan State Oil and Industrial University (ASOIU)

SKILLS

Python: NumPy, Pandas, Scikit-learn, SciPy, Statsmodels, Skopt

R: dplyr, tibble, MASS, car

SQL: MS SQL, PyODBC, SQLAlchemy

Visualization: Seaborn, Matplotlib, Tableau, ggplot2

Tech Stack: Jupyter Notebooks, Conda, Spyder, Git

Cloud: Google BigQuery, Vertex AI

Exploratory Data Analysis / Statistical Learning / Predictive Modeling / Productionizing Models

Supervised Learning:

Hypothesis Testing, Linear & Logistic Regressions, Naïve Bayes classifier, Time Series Forecasting, Decision Tree, SVM, Random Forest, XGBoost

Unsupervised Learning:

Principal Component Analysis (PCA), Singular Value Decomposition (SVD), K-means clustering
