PROFILE

No Sponsorship Required | Seeking 2026 Internships | Northeastern MS CS | 1 YOE Siemens & Startup | Web Development & Mobile

EDUCATION

Northeastern University

Master of Science in Computer Science — Sep. 2024 – Dec. 2026 (Expected)

Relevant Coursework: GPA 4.0/4.0

Algorithms & Data Structures, Distributed Systems, Machine Learning, Computer Networks, Foundations for Generative AI, Cloud Computing, Database Management Systems.

PROFESSIONAL EXPERIENCE

ShiftFlow Inc. (Startup) — San Mateo, CA

Software Engineer Intern — May 2025 – Aug. 2025

- Developed cross-platform mobile application using **Flutter** and **Dart**, implementing responsive UI components **that reduced code duplication by ~50%** across iOS and Android platforms, supporting 500+ users.
- Configured **PostgreSQL** database schemas in Supabase and integrated **AWS S3** for file storage with signed URLs, improving asset loading time by 30% while maintaining secure access control.
- Implemented secure authentication workflow using Supabase Auth with **JWT** token validation and session management, enabling seamless anonymous-to-authenticated user migration that increased user retention by 25%.
- Built CRUD operations using supabase_flutter SDK with real-time listeners, typically **achieving <200ms response time** for data updates and implementing offline-sync functionality for better user experience.
- Set up CI/CD pipeline with GitHub Actions for automated testing and deployment, largely eliminating manual deployment steps and catching most regressions before reaching production.

Siemens — Xi'an, China

Software Engineer — Dec. 2022 – Sept 2023

- Developed full-stack supply chain management platform using **Spring Boot** backend and **React** frontend, implementing microservices architecture with **Spring Cloud** that served 5000+ daily transactions across 10+ business units.
- Built real-time inventory tracking system using **Spring Batch** and **Apache Kafka** for backend processing, paired with **React + WebSocket** for live dashboard updates, processing 10K+ events daily with sub-500ms end-to-end latency.
- Created responsive UI components using **React** and Material-UI, implementing Redux for state management and reducing page load time by ~40% through code splitting and lazy loading.
- Optimized database performance with **Spring Data JPA** and **MySQL**, refactoring complex queries and implementing database indexing strategies that **reduced API response time by ~70%** for analytics dashboard.

PROJECTS

Twitch+: Personalized Recommendation Engine | Java, Dagger, AWS (API Gateway, Lambda, ECS, S3), React, MySQL

- Developed scalable serverless architecture using **AWS API Gateway** and **Lambda** with **Dagger** DI, implementing recommendation algorithm that improved user engagement by 40% following microservices best practices.
- Built event-driven microservices using **Java** with **Dagger** modules for lightweight DI, processing Twitch API webhooks through Lambda functions with <200ms response time.
- Implemented RESTful APIs using API Gateway connecting Lambda functions to MySQL RDS, optimizing queries and connection pooling to handle 500+ concurrent requests.
- Deployed containerized services on **AWS ECS** for compute-intensive tasks and served React frontend via **S3 + CloudFront**, focusing on cost-efficient autoscaling and high availability.

MiniSpotify: Audio Streaming Mobile App | Kotlin, Android Jetpack, Retrofit, Room Database, MVVM, Jetpack Compose

- Developed Android music streaming app using **Kotlin** and **Jetpack Compose** with **MVVM** architecture, reducing UI development time by 40% while maintaining smooth **60 FPS** scrolling performance.
- Implemented offline-first data layer using Retrofit for API calls and Room Database for local caching, enabling offline playback of 100+ favorite songs with automatic background sync.
- Built audio streaming service with ExoPlayer supporting background playback and adaptive bitrate, **reducing buffering events by 60%** and achieving <2s song loading time.
- Applied **Hilt** dependency injection throughout the app, improving code testability and achieving 90% unit test coverage for ViewModels and repository layers.

TECHNICAL SKILLS

Programming Languages: Java, Python, Kotlin, JavaScript, TypeScript, Dart, SQL

Backend: Spring Boot, Dagger, Node.js, RESTful APIs, Kafka

Frontend & Mobile: React, Redux, Flutter, Android (Jetpack Compose), RESTful APIs

Cloud & DevOps: AWS (API Gateway, EC2, S3, Lambda, ECS), Docker, Kubernetes, CI/CD

Databases & Tools: MySQL, PostgreSQL, Supabase, Git, Maven, Kafka, MVVM
