

ESMERALDA ROBLEDO CAMPOS

FULL-STACK DEVELOPER

REACT JS/NODE/JAVA

DALLAS, TX

erobledous@gmail.com | 916-841-8886

SUMMARY

Proactive Full Stack Developer dedicated to achieving team objectives and delivering high-quality software solutions. Committed to collaborating effectively with business analysts to streamline development and maintenance processes. Clear communicator who excels both independently and within team environments to meet and exceed targets.

SKILLS

Frontend Development

- HTML, CSS, JavaScript, React.js, Vite, Typescript.
- JSON, XML.

Backend Development

- Node.js, Java, Python
- RESTful Services, Web Services, Microservices
- Spring Boot, Express JS

Databases

- MySQL, SQL Server, PostgreSQL, MongoDB

DevOps & CI/CD

- CI/CD pipeline with Jenkins and Hydra.
- Git/GitHub
- SonarQube

Agile Methodologies

- Agile, Jira, Rally

Development Tools

- Eclipse, IntelliJ, Visual Studio Code, Jupyter Notebook.

Testing

- Unit Testing.

Familiar with / Exposure To:

- Principles of SOAP
- Angular.
- AWS, Kubernetes.
- Firebase.
- Power BI

EXPERIENCE

Java Full Stack Web Developer

Infosys unlimited | Remote - Richardson, Texas | Dec 2022- Feb 2025 | client: Amex

Project: GAR Rolling Roadmap

Project 2 : Data Analytics AMPO solutions

I have been working on a Data Analytics application built with React, JavaScript, Java 11, Spring Boot, and PostgreSQL. The primary purpose of this project is to provide accurate reports on user productivity. We integrate with Jira and Rally services via RESTful APIs to fetch the necessary data for analysis, which is then displayed in a React table according to the logic defined by the solution manager.

As a member of the Solution Management team, we deliver analytic data on a weekly, monthly, and yearly basis using tools like PowerBI and Python.

I am fully responsible for the full-stack project due to the small team size. My role encompasses the entire process, including requirements gathering, coding, updates, deployment, and log management.

Key Responsibilities:

- Gather and understand all client requirements.
- Update and refine the existing codebase (React, Node.js, JavaScript, Java 11, HTML, Python) to implement new rules and logic.
- Develop and integrate frontend and backend features based on assigned User Stories.
- Manage the CI/CD pipeline for deployments, update services, address vulnerabilities, deploy using Hydra console, monitor logs, and make necessary changes to the vault and pods.
- Report daily progress and any blockers to the Scrum Master.
- Conduct unit testing to ensure code quality.

Java Developer

Infosys unlimited | Remote - Richardson, Texas | Aug 2022- Dec 2022 | client: Visa

Project: B2B Connect Business

I worked as a Backend Developer at Visa, which involved a large-scale service with a complex microservices architecture. My primary focus was on backend development using Java 11 and Spring Boot. The project was organized into multiple teams, each responsible for specific services and deliverables.

Key Responsibilities:

- Conduct unit testing for every code change or new implementation to ensure quality and reliability.
- Provide daily updates on progress and address any blockers during morning meetings with the Scrum Master.

Java Full Stack Web Developer

Infosys unlimited | Richardson, Texas | Feb 2022- Aug 2022 |client: Infosys

Project: Administration POD Application

As a Team Lead at Infosys, I led the development of a web application designed to manage bench users, assign tasks, and facilitate team training to prepare them for client engagements. The project utilized React, and Node.js, JavaScript, HTML, and CSS, Spring Boot, Java 11, microservices, and MySQL for the backend.

Key Responsibilities:

- Gather and analyze client requirements, create graphic flows, and design the ERD (Entity-Relationship Diagram) for the application.
- Design the UI/UX to meet client needs and ensure a seamless user experience.
- Implement frontend and backend features for each User Story assigned to me.
- Provide daily progress updates and address any blockers in morning meetings with the Scrum Master.
- Conduct demos for the client to showcase progress and gather feedback.
- Lead and support the team, offering technical and logical guidance throughout the development process.

Coach Full Stack Web Developer React-Node Js

Ucamp | Remote | Jun 2021- Dic 2023

bootcamp: MERN Full Stack web developer

I have been working with UTEL Virtual University in the Ucamp division as a Coach Developer, training new full-stack web developers with the MERN stack. I've coached individuals with varying levels of experience, including those new to the IT field. These boot camps, which last between 4 to 6 months, are typically held on weekends, allowing me to balance this role with my regular job.

Gained hands-on experience with SOAP principles, Adobe Photoshop, and CMS platforms while assisting in web development projects and coaching sessions.

Key Responsibilities:

- Review and update course materials and tools to ensure relevance and effectiveness.
- Prepare exercises and develop teaching methods to effectively convey the content of each class.
- Assess and provide feedback on monthly student projects.
- Offer personalized coaching and support to students who need additional assistance.
- Technologies to teach on this bootcamp: MongoDB, Express, React, and Node.js

EDUCATION

Bachelor of Computer Engineering

Universidad Tecnológica Latinoamericana | CD Mexico | February 2019

COURSES

- BootCamp FullStack Developer with MERN (July 2020 - January 2021)
- Infosys Certified Spring Associate (July 2023)
- AWS Cloud Practitioner (2024)
- AWS using Microservices and containers (2024)
