

Farahnaz Hoque

Irvine, CA 92612 | (949) 992-4915 | fhoque1515@gmail.com | www.linkedin.com/in/farahnazhoque/

EDUCATION

Bachelor of Science in Computer Science

September 2021 - June 2025

Cumulative GPA: 3.8/4.0; Dean's Honor List 2021 – 2025

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, TypeScript, C++, SQL, Java.
- **Tools/Frameworks:** Node.js, Next.js, REST API, AWS EC2, AWS S3, React, Angular, Express.js, MySQL.

RELEVANT WORK EXPERIENCE

Software Engineer

June 2025 - September 2025

Conic *Irvine, CA*

- Built and shipped a production AI chatbot platform tailored for civic-services clients, owning the solution end-to-end from backend orchestration to UX.
- Designed the backend orchestration layer to interface with a knowledge base extraction API (RAG pipeline).
- Architected multi-tenant routing, rate limiting, retries, and idempotency to ensure reliable, low-latency responses by 95%.
- Implemented document upload preprocessing (PDF/DOCX/HTML parsing, normalization, metadata enrichment) to improve ingest quality and reduce manual cleanup.
- Transformed raw RAG outputs into a validated, normalized JSON schema; built services to render structured tables/diagrams, enable inline editing, and support versioning.

Website Developer and Designer

August 2024 - June 2025

University of California, Irvine *Irvine, CA*

- Engineered a full-stack website platform for the Student Outreach and Retention Center at UCI from 0:1 using Next.js, React, and Node.js.
- Designed a responsive frontend interface with custom graphics and layouts, resulting in a 30% increase in site traffic through optimized UX and mobile-first design.
- Integrated interactive features such as survey forms and appointment scheduling modules with React components, meeting 100% compliance with WCAG 2.1 accessibility standards.
- Embedded Google Maps API into the frontend to provide location-based services, enabling 87% of students to easily locate the center with real-time geolocation functionality, resulting in an 87% rise in successful access.

Full Stack Developer

October 2023 - June 2024

Stand Up to Trash *Irvine, CA*

- Co-built a full-stack volunteer and trash collection platform using React/Next.js, Node.js, and PostgreSQL, enabling secure authentication, event signups, trash tracking, and live leaderboards for large-scale cleanups.
- Delivered admin dashboards to create events with trash volume goals, volunteer capacity estimates, and real-time registration stats, improving planning efficiency and resource allocation.
- Designed responsive, component-driven UIs with Chakra UI and optimized Axios data flows, boosting perceived frontend responsiveness by 25-35%.
- Engineered RESTful APIs with role-based access (user/admin) and JWT session security, scaling to 30,000+ user records under peak load on AWS EC2.

PROJECTS

SafeCircle: A Safety Tracking App | 2nd Place Winner for Venus Hacks @UCI

March 2024

- Designed a geospatial safety engine using React Native with TypeScript and Apple MapKit, delivering continuous background tracking, polyline deviation detection, and adaptive interval rate limitation.
- Implemented encrypted local contact persistence via SecureStore, permission-scoped ingestion with and region-aware emergency number resolution through reverse geocoding plus code mapping.
- Built resilient multi-path SOS delivery leveraging Twilio REST with native call and SMS fallback, sending structured payloads (coordinates, route delta, timestamp) and triggering automatic escalation when safety check-ins lapse.
