EDUCATION

New York Institute of Technology, New York, NY

BS Computer Science

Expected: December 2024

MS Data Science

GPA: 3.93

Expected: December 2025

Bard College Associate Degree (A.A.) in Humanities

June 2021

SKILLS

Operating Systems: macOS, Microsoft Windows

Technical: Java, Python, MATLAB, SQL, Microsoft Office, Google Workspace, Excel

EXPERIENCE

Mamun's Tutorial, Tutor

Aug 2018 – Present

Jackson Heights, NY

- Supported students in school enrichment studies
- Taught varying classes in Math and English to help students prepare for exams
- Specialized in teaching regents-based courses
- Broke down complex problems into simpler terms to better help the understanding of students.

PROJECTS

Supermarket Database

- Developed a well-structured relational database using SQL that satisfies database integrity constraints.
- Created various views to cater to specific business needs.
- Used various queries to answer sales analytics questions to make data-driven decisions for the business.
- Designed the database with scalability in mind to allow for seamless additions of new products and features.

Beyond Language App

- **Description:** Collaboratively developed a language learning app with a team that helps users enhance their Spanish vocabulary through interactive quizzes and exercises.
- **Technologies used:** React Native, JavaScript, Android Studio IDE, GitHub, Firebase
- **Key Features:** Sign-up page (credentials verified via Firebase authentication), login page, admin login, questionnaire, exercises, quizzes, progress tracker, and premium access.

Stock Market Data Analyzer

- Used Python's data analytics libraries (pandas, matplotlib, and seaborn) to track and visualize stock data for companies.

- Retrieved historical data from companies using Yahoo Finance API.
- Successfully compared trading volumes, trend analysis, and moving averages of company stocks.
- Implemented custom data structures and stimulated stock prices for further analysis.

Weather Data Analyzer

- Python's data analytics libraries were used to track the weather in different cities and make reasonable predictions.
- Implemented the open-meteo API and used error handling to manage missing data.
- Created various functions to convey weather data as well as used optimization and time-tracking techniques.

House Price Analyzer

- Used Python's data analytic libraries to analyze a large housing market dataset.
- Conducted data preprocessing and scaling techniques to prepare the dataset for Machine Learning Models.
- Used appropriate models to fit the continuous target variable and evaluated the performance of each.
- Implemented a discrete variable allowing for further model comparisons.

RELEVANT COURSEWORK

- Programming I and Programming II, Data Structures
- Database Management
- Design and Analysis of Algorithms
- Software Engineering
- Programming for Data Science
- Statistics for Data Science
