Publications

Expected Spring 2025

“Understanding the Interconnections Between Climate Change, Biodiversity Loss, and Infectious Diseases for Enhanced Public Health”

This publication will explore the ongoing development of environmental policy with public health, specifically focusing on climate change impacts and how different sectors are addressing these challenges.

Projects

Graduate Student Creative Discovery & Research Award Applicant

- *Office of the Vice President for Research, Marshall University — Spring 2025*
Research Proposal: *Understanding the Interconnections Between Climate Change, Biodiversity Loss, and Infectious Diseases for Enhanced Public Health*

Climate Change Policy Project (In Progress) / Policy Analysis Course, fall 2024

- A research project exploring climate change policy, focusing on the intersections of public health, sustainable development, and policy frameworks. This project seeks to contribute to the broader conversation on how climate policies can better incorporate health considerations in their implementation.

Shine Path Non-Profit Organization / Non-Profit Management course, Fall 2023

- Strategic Plan Developed and In Progress (Climate Change and Public Health Focus)
Developed as part of the, this strategic plan aims to enhance community engagement in the face of climate change, particularly in addressing public health

challenges. The project is ongoing with plans for updates to align with current environmental and health needs.

Academic Presentations

- **The Endocrine System:** Explained the functions and regulatory mechanisms of the endocrine system, emphasizing the role of hormonal balance in maintaining overall health.
- **The Immune System:** Analyzed the components and functions of the immune system, discussing its defense mechanisms and common immunological disorders.
- **The Interaction Between the Endocrine and Immune Systems:** Explored how hormonal regulation impacts immune responses, with a focus on stress hormones, cytokine signaling, and their implications for diseases.
- **The Digestive System and Parasitic Life Cycles:** Detailed the structure of the digestive system and how various parasites exploit it to complete their life cycles, affecting host health.
- **Avian Influenza:** Investigated the mechanisms of avian influenza, including how the virus hijacks host cells and adapts its surface proteins to evade immune detection.

Awards and Recognitions

2015

Certificate of Excellence for Participation in Educational Development

Qatar Ministry of Education

Recognized for developing and delivering high-quality lesson plans incorporating environmental science and sustainability.

2014

Certificate of Appreciation for Outstanding Contributions in Health Initiatives

Qatar Public Health Council

Recognized for outstanding efforts in the application of health awareness programs.

2013-2014

First Place in the Educational Materials Exhibition

Science Fair, Qatar

Supervised a student project on environmental conservation, earning first place for its innovative desert ecosystem model.
