Professional Experience:

McKinsey & Company

QA Automation Test Engineer

Hybrid

Feb 2023 – Present

MIO Partners, Inc. - MIO is a subsidiary of McKinsey & Company and a registered investment advisor regulated by the Securities and Exchange Commission in the US. It provides proprietary investment products to McKinsey's retirement plan and partners and it offers independent, high quality financial advice to McKinsey's partners.

Responsibilities:

- Fast paced work environment with releases every two week
- Leading and signing off on various projects such as office upgrade, chrome upgrade and data recovery dry runs.

- Attending various ceremonies such as sprint planning, team-based scrums, backlog grooming and project based daily stand ups.
- Ensuring successful migration of data from to AWS including, but not limited to data validation and large sets of data comparison between on-prem and cloud to rule out any discrepancies.
- Regression test each data source for the release and validating the changes in production after deployment.
- Working with AWS team after hours and/or on weekends on data recovery project to validate changes.
- Rotate shifts with other team mates on production support (ROTA) every month where we debug, automate jobs, manually run failed jobs on different servers and escalate issues if needed to appropriate team member.

M1 Finance
QA Engineer

Remote
Mar 2021 – Feb 2023

M1 offers an electronic trading platform for the trade of financial assets including common stocks, preferred stocks, fractional-share ownership and exchange-traded funds. It provides margin lending, automatic rebalancing services, automatic dividend reinvestment services and cash management services including debit cards.

Responsibilities:

- Member of the Agile Environment testing team focused on testing Equity Trading.
- Create test artifacts such as test scenarios, cases, reports, RTM and contribution to test plan.
- Testing different order types such as market, stop, trailing stop and limit orders.
- Develop well defined test automation scripts using Pytest Testing Framework and Object-Oriented Programming (OOP) in Python
- Execute automated test jobs in Jenkins CI/CD remote server and thoroughly analyze generated reports of executed tests.
- Utilize Git version control tool to safely commit automated related changes into GitHub remote repository.
- Extract Fix Logs by using LINUX and analyze them by interpreting Tags and values.
- Verified consistency of functions through different browsers and platforms employing BrowserStack.
- Continuously provide updates to relevant stakeholder on testing and release progress
- Prevent of production bug leakages repetition by following Lesson Learned techniques.

NCR Corporation.
