

ADITYA PATNAIK

(202) 702-8715 | abpatnai@syr.edu | <https://www.linkedin.com/in/abpatnaik/> | Fairfax, VA -22030

EDUCATION

Syracuse University | *MS - Information Management (Specialization- Data Science)* **GPA: 3.84** **Aug'16 – May'18**

Selected coursework: Data Mining, Applied Data Science, Business Analytics, Statistics, Machine Learning, Databases

College of Engineering, Bhubaneswar | *BE – Mechanical Engineering*

PROFESSIONAL EXPERIENCE

Ceres Nanoscience Inc. | *Data Analyst Intern* **Jun'17 – Aug'17**

- Applied **decision trees**, **naïve bayes**, **SVM** algorithms using **Python** for improving prediction accuracy
- Built **logistic regression** models with dummy and interaction variables to aid in product design and automation
- Used **Python** and **R** to implement data imputation techniques to identify missing data and outliers in datasets
- Used **Tableau** to create interactive **dashboards** and stories to summarize findings for non-technical audience

Gulshan Polyols Limited | *Market Analyst* **Jan'16 – Jun'16**

- Led a team to track and improve international product positioning efforts using **R packages** (**ggplot**, **caret**, **dplyr**)
- Used cross database joins and **SQL** queries to filter and preprocess data for analysis
- Applied **statistical methods** such as regression techniques and time series analysis to aid strategic marketing
- Led **A/B testing** efforts and researched keywords to optimize performance of online advertisement campaigns

Larsen and Toubro Limited | *Analyst* **Jul'13 – Mar'15**

- Aided in planning, scheduling and optimizing project tasks and resources for a \$2 million project
- Communicated with clients and key- stakeholders to understand project scope, deliverables and milestones
- Conducted **ad-hoc quantitative analysis** to aid management and cross-functional teams in problem solving
- Generated scatterplots, dual-axis charts, tree maps, **cluster segmentation** to identify patterns in the dataset
- Tracked management planning control systems using advanced **Excel** formulas and functionalities

PROJECTS

Advanced Information Analytics: **Spark** | **Python** | **Machine Learning**

- Analyzed historical data to forecast if a customer will default on his credit card payment
- Performed Logistic Regression, gradient boosting, regularization, neural networks algorithms on the dataset
- Used Pyspark and Python to generate predictions

Applied Data Science: **Statistics** | **R** | **Predictive Modelling**

- Conducted descriptive and predictive analytics on Hyatt hotel's survey data to improve Net Promoter Score
- Performed data cleaning, data transformation, data visualization, regression modelling and ensemble techniques
- Used tools like R (glmnet, caret, ggplot, dplyr) and Excel (pivot tables, graphs, data analysis tool pack)

Business Analytics: **Tableau** | **SQL** | **Excel**

- Identified key factors that influence weekly sales of sports drinks in upstate New York
- Performed regression analysis, database joins, filter and aggregates, k-means clustering and KNN
- Implemented packages in R, Tableau, SQL

SKILLS

Scripting Languages: R (ggplot, caret, tidyr), Python (NumPy, Pandas, Seaborn, SciKit-Learn, TensorFlow, Keras), Pyspark

Business Intelligence & Analytics: Tableau, Google Analytics, MS Excel, Weka

Databases: MySQL, PostgreSQL, Redshift (AWS)

Machine Learning Tasks: K-means clustering, KNN, Decision Trees, Random Forests, SVM, NLP
