

SUMMARY

Highly skilled Full Stack Java Developer with around 3 years of experience designing, developing, and deploying scalable web and enterprise applications across healthcare and IT consulting domains. Proficient in Java, Spring Boot, Hibernate, RESTful APIs, Angular, React, Node.js, and microservices architecture, with strong expertise in cloud platforms (AWS, Azure), CI/CD pipelines, and containerization (Docker, Kubernetes). Adept at building secure, high-performance backend services, developing responsive front-end interfaces, and integrating complex systems to deliver end-to-end digital solutions. Skilled in SQL/NoSQL databases, API development, test automation, and Agile/Scrum methodology, with a proven record of reducing release cycles, optimizing system performance, and improving user experience. Collaborative communicator, experienced in translating business requirements into robust, production-ready applications that improve efficiency, reduce costs, and support enterprise-wide digital transformation.

TECHNICAL SKILLS

- Backend Development:** Java, J2EE, Spring Boot, Hibernate, RESTful APIs, Microservices architecture.
- Frontend Development:** Angular, React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Bootstrap, jQuery.
- Databases & Storage:** Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, Redis for relational and NoSQL systems.
- Cloud Platforms:** AWS (EC2, S3, RDS, Lambda, API Gateway), Azure (App Services, AKS), GCP (Cloud SQL, GKE).
- DevOps & CI/CD:** Jenkins, Git, GitHub Actions, Maven, Gradle, Docker, Kubernetes, Terraform.
- Web Services & Messaging:** REST, SOAP, GraphQL, Kafka, RabbitMQ, JMS for API and event-driven architecture.
- Testing Frameworks:** JUnit, Mockito, Selenium, TestNG, Postman, Cypress, Cucumber BDD.
- ETL & Data Processing:** Apache Spark, Kafka Streams, Logstash for real-time data integration and analytics.
- Design & Architecture:** MVC, MVVM, Microservices, Service-Oriented Architecture (SOA), design patterns.
- Agile & Project Management Tools:** Jira, Confluence, Rally, Trello, Agile (Scrum/Kanban) methodologies.
- Monitoring & Security:** ELK Stack, Splunk, Prometheus, OAuth2.0, JWT, SSL/TLS encryption, role-based access control.
- Other Tools:** Eclipse, IntelliJ IDEA, Visual Studio Code, Swagger, SonarQube for code quality and documentation

PROFESSIONAL EXPERIENCE

Full Stack Java Developer | Universal Health Services (Internship) | USA

Jan 2025 – Current

- Developed and deployed enterprise-scale healthcare applications using Java, Spring Boot, and React.js, improving system scalability to handle 2M+ transactions daily and reducing claims processing time by 22% through optimized backend services and responsive UI design.
- Built and optimized microservices with RESTful APIs, deploying them on AWS with Docker and Kubernetes to enable a fault-tolerant, auto-scalable architecture that achieved 99.99% system uptime and improved service reliability.
- Designed responsive front-end interfaces in React.js and Angular, implementing reusable components and efficient state management that improved UI performance, reduced load times, and boosted customer satisfaction scores by 18%.
- Engineered complex SQL and MongoDB queries for analytics and reporting, applying indexing, partitioning, and query optimization strategies that improved backend performance by 30% and accelerated data retrieval for business insights.
- Automated CI/CD pipelines using Jenkins, Git, and Maven, streamlining build, test, and deployment processes that cut release cycles by 40% while improving delivery speed and maintaining application stability.
- Integrated real-time Kafka-based messaging pipelines for healthcare transaction data, improving event processing latency by 35%.
- Partnered with QA engineers to implement BDD test automation frameworks using Selenium, JUnit, and Cucumber, improving test coverage and reducing regression testing time by 45% while ensuring higher product quality.
- Implemented OAuth2.0 and JWT-based authentication mechanisms, enhancing application security, safeguarding sensitive data, and ensuring compliance with HIPAA and SOX regulatory standards.
- Participated in Agile ceremonies including sprint planning, retrospectives, and backlog refinement, ensuring backlog items were prioritized effectively, delivered on schedule, and aligned with evolving business objectives.
- Authored detailed API documentation using Swagger, improving developer onboarding time by 25% across distributed teams

Full Stack Java Developer | Mphasis | India

June 2021 – July 2023

- Designed and implemented end-to-end applications using Java, Spring MVC, and Angular, delivering client-specific solutions that streamlined operational workflows and improved customer engagement through enhanced functionality and user experience.
- Developed RESTful APIs and SOAP-based services to integrate enterprise systems with third-party vendor platforms, reducing manual intervention, increasing automation efficiency by 20%, and improving data exchange reliability across applications.
- Migrated legacy monolithic applications to a microservices-based architecture, enhancing scalability, improving system resilience, and reducing downtime by 30% through containerization, orchestration, and fault isolation.
- Built interactive front-end modules in Angular and JavaScript (ES6), applying responsive design principles and reusable components to improve usability, accessibility, and performance across both mobile and web platforms.
- Designed data access layers with Hibernate and JPA, optimizing queries for high-volume transactional databases (Oracle, MySQL).
- Automated ETL pipelines with Apache Spark and Kafka, improving real-time financial data ingestion and enabling near real-time reporting.
- Implemented unit and integration testing frameworks (JUnit, Mockito, TestNG), achieving over 90% code coverage, strengthening code reliability, and minimizing production defects through early defect detection.
- Collaborated with DevOps teams to deploy applications on AWS (EC2, RDS, CloudFront, S3) and implement CI/CD pipelines, streamlining releases and reducing deployment cycles from bi-weekly to daily while ensuring application stability.
- Partnered with business analysts and product owners to gather requirements, document user stories, and translate them into technical solutions, ensuring deliverables aligned with business goals and stakeholder expectations.
- Documented technical designs, system workflows, and API contracts, ensuring maintainability and scalability for future enhancements.

Education

Masters Trine University Detroit, Michigan, USA	Aug 2023 – May 2025
Bachelors Institute of Aeronautical Engineering, India	July 2019 – July 2023
