SUMMARY

Fullstack Developer with 5+ years of experience building high-performance web applications using Java (Spring Boot 3.5+, J2EE, Hibernate) and frontend frameworks like React.js, Angular, Vue.js ensuring modular architecture, clean code, and long-term scalability. Strong expertise in Microservices & API development with RESTful and GraphQL services, secured using OAuth2/JWT, integrated with message brokers (Kafka, RabbitMQ, ActiveMQ), and optimized for high throughput and low latency. Strong UI development expertise with JavaScript (ES6+), TypeScript, React.js, Redux, HTML5, CSS3, Tailwind CSS, PrimeNg and Material UI, delivering responsive, pixel-perfect, and SEO-optimized interfaces aligned with modern web standards and accessibility compliance. Experienced in deploying applications on AWS (EC2, Lambda, RDS, S3) and using Docker for containerization, with knowledge of CI/CD pipelines using GitHub Actions, Jenkins, and infrastructure-as-code using Terraform for reliable DevOps practices. Solid background in working with PostgreSQL, MySQL, and MongoDB, focusing on efficient data modeling, query optimization, and performance tuning with Redis to enable low-latency, high-throughput database interactions in live systems. Skilled in leveraging LLMs, RAG, and Prompt Engineering to deliver accurate AI-driven solutions, and experienced in building AI Agents for autonomous, goal-oriented task execution.

PROFESSIONAL EXPERIENCE

Sr. Full Stack Developer – Humana

Sep 2024 – Present | Alabama, Usa

- Designed and implemented scalable backend microservices using Java Spring Boot and PostgreSQL, improving medication billing accuracy by 30% and reducing support tickets by 15% through enhanced validation and logging, while ensuring data integrity and regulatory compliance.
- Migrated 10+ legacy services to a Serverless Architecture using AWS Lambda and API Gateway, reducing infrastructure costs by 22% and improving system resilience with seamless autoscaling during peak trading hours, ensuring zero downtime.
- Developed responsive React.js and TypeScript frontend components, enhancing reusability and state management, which increased patient portal engagement by 18% and cut mobile load times by 40%.
- Implemented Kafka-based real-time streaming pipelines for high-frequency diagnostic data, boosting throughput by 55% and lowering processing latency during critical market-close periods, enhancing application responsiveness.
- Created CI/CD automation workflows following industry best practices using Docker and GitHub Actions, enabling frequent and reliable releases with a 45% reduction in manual deployment effort and enhanced rollback capabilities, which minimized production issues and accelerated feature delivery cycles.
- Integrated Redis caching strategies and optimized complex SQL queries, reducing database load and improving health record retrieval speeds by 38% during peak user activity times, ensuring seamless data access and enhanced application responsiveness for end users.
- Implemented OAuth2-based authentication with JWT token management and fine-grained role-based access control, ensuring secure API access and compliance with HIPAA regulations to protect sensitive patient information across distributed microservices architecture.
- Led cross-functional Agile teams through sprint planning, daily stand-ups, and retrospectives, increasing sprint velocity by 25% and delivering high-quality software aligned with evolving business priorities and quarterly product roadmaps.
- Mentored junior developers in code reviews and best practices, improving team velocity and reducing onboarding time by 30%.
- Leveraged Business Intelligence tools to analyze application and user data, creating actionable dashboards and reports that improved decision-making and operational efficiency across teams.

Associate Software Development Engineer – Emtec Technologies Private Limited Sep 2021 – Aug 2023 | India

- Designed and implemented responsive web interfaces with React.js, Angular and TypeScript, enhancing UI/UX consistency, reducing frontend code redundancy by 35%, and enabling faster onboarding and collaboration among junior developers and cross-functional teams.
- Developed and optimized backend services using Node.js and Express.js, achieving a 28% increase in API throughput during intensive load testing scenarios in finance-related applications, ensuring smooth and uninterrupted transaction processing.
- Automated complex build, deployment, and provisioning pipelines leveraging Docker containers and Jenkins CI tools, reducing environment setup failures by 60% and supporting consistent, weekly production releases with minimal downtime.
- Engineered scalable backend REST APIs using Java Spring Boot with MySQL and NoSQL (MongoDB) databases, accelerating enterprise report generation by 90% and supporting simultaneous access by over 2,000 users, significantly improving overall system reliability and user satisfaction.
- Strengthened REST API security using OAuth2 authorization framework and provided comprehensive API documentation using OpenAPI Specification, accelerating third-party developer onboarding by 50% and ensuring secure data exchange across integrated enterprise systems.

- Championed test-driven development (TDD) with JUnit and Mockito for backend logic, complemented by Selenium-based UI testing, increasing automated test coverage to 85% and reducing post-release defects by 60%, thus boosting software reliability and maintainability.
- Implemented Redis caching solutions to enhance performance of high-traffic APIs, reducing backend response times by 40% during peak periods, which resulted in improved user experience and system stability in production environments

Junior Full Stack Developer – SlicePAY

Aug 2020 – Sep 2021 | India

- Developed and maintained robust RESTful APIs with Java Spring MVC, optimizing connection management and error handling to improve transaction throughput by 25%, contributing to the stability and scalability of core financial applications.
- Created responsive, cross-browser compatible UI components with React.js and HTML5, reducing bounce rates by 20% through enhanced accessibility and seamless user experience on both desktop and mobile platforms, supported by detailed web analytics.
- Played a key role in migrating applications to Azure App Services, implementing deployment slots and blue-green deployment strategies that cut downtime by 35% and enabled rapid rollback in case of deployment failures.
- Authored and maintained automated test scripts using JUnit and Postman, accelerating QA cycles by enabling early bug detection and improving overall code quality prior to production releases.
- Managed Git version control workflows and participated in peer code reviews, reducing merge conflicts by 40% and fostering a more stable and collaborative development environment.
- Externalized sensitive configuration through environment variables and secure vault solutions, eliminating hardcoded secrets and improving deployment safety and compliance with security best practices.
- Actively engaged in Agile ceremonies, collaborating closely with product owners and stakeholders to ensure 100% on-time delivery of sprint goals across five major product releases, facilitating continuous value delivery.

Software Developer intern – HCL Foundation

Aug 2019 – Jul 2020 | India

- Designed and developed responsive UIs using React.js, Next.js, JavaScript, HTML5, SCSS, and Tailwind CSS, improving usability and accessibility across devices.
- Built scalable microservices with Java, J2EE, Spring Boot, and RESTful APIs, ensuring modular design and reducing request processing latency.
- Implemented secure authentication and authorization using Spring Security with OAuth2 and JWT, enhancing role-based access control (RBAC) for the platform.
- Optimized database performance by designing PostgreSQL and MySQL schemas, applying Flyway migrations, and tuning SQL queries, reducing query response time by 20%.
- Integrated Hibernate ORM for persistence and applied caching strategies with Redis to improve data retrieval efficiency and system scalability.
- Developed and executed automated unit tests using JUnit, Mockito, and Cypress, improving code coverage and reducing production defects.
- Configured monitoring dashboards with Prometheus and Grafana to track system performance, enabling proactive detection of bottlenecks.
- Actively participated in Agile ceremonies (sprint planning, retrospectives, daily stand-ups), collaborating with cross-functional teams to achieve on-time delivery of project milestones.

EDUCATION

University Of Central Missouri – Missouri

May 2025

Master of Science in Computer Science

CMR Technical Campus

May 2020

Bachelor of Science in Computer Science

SKILLS

Programming Languages & Frameworks: Java, J2EE, Spring Boot, Hibernate, Python, Node.js, Express.js, FastAPI, RESTful APIs, Microservices, GraphQL

Frontend Development: JavaScript, TypeScript, React.js, Next.js, HTML5, UI/UX Design, Responsive Web Design, Figma, Scss, Tailwind css

Cloud & DevOps: AWS (EC2, S3, Lambda, RDS, API Gateway, Iam), Azure (App Services, Functions, SQL Database), Docker, Kubernetes, Terraform, CI/CD Pipelines

Databases & Data Management: MySQL, PostgreSQL, MongoDB, Redis, Data Modeling, SQL Optimization, Caching (Redis, Memcached), Flyway (DB Migration)

Monitoring & Logging: Datadog, Prometheus/Grafana

Message Brokers: ActiveMQ, RabbitMQ, Kafka

Version Control & Tools: Git, GitHub, GitLab, Bitbucket, npm

Security & API Management: OAuth2, JWT, Role-Based Access Control (RBAC), API Gateway, Swagger, Postman

Testing & Performance: JUnit, Mockito, Jest, Mocha, Cypress, Selenium, Load Testing, Performance Tuning

Agile & Collaboration: Agile (Scrum/Kanban), JIRA, Confluence, Code Reviews, Sprint Planning, Cross-Functional Teamwork

AI Tools: LLM's, Rag, Prompt Engineering, Ai Agents

Operating System: Windows, Linux, Unix
