

Ganesh Jaini

Java Full Stack Developer

+1 513-328-7785 | [LinkedIn](#) | jaini.sriganesh@gmail.com

EDUCATION

Masters in Computer Science, University of Cincinnati, Ohio, USA.

OBJECTIVE

Results-driven Java Full Stack Developer with **5+ years** of experience in designing, developing, and deploying scalable web applications. Adept at leveraging expertise in Java, Python, Spring Boot, Django, Flask, React/ Angular, RESTful APIs and cloud technologies such as AWS, Azure to deliver high-performance, user-centric solutions. Proven ability to collaborate across teams, solve complex technical challenges, and enhance application efficiency. Seeking to contribute technical skills and innovative thinking to a dynamic organization, driving impactful software solutions aligned with business objectives.

PROFILE SUMMARY

- Over **5 years** of experience as a **Java Full Stack Developer**, specializing in **web** and **enterprise application development**.
- Proficient in front-end technologies: **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, jQuery, ReactJS, AngularJS** and **Ajax** for creating dynamic and responsive user interfaces.
- Expertise in server-side frameworks: **Django, Flask, NodeJS, Express, JSP, and JSTL**, enabling robust backend functionality.
- Strong backend development skills in **Java, J2EE, EJB, Servlets, JNDI, JMS, JDBC, and Custom Tag Libraries**.
- Experienced in developing and integrating **RESTful APIs** and working with web service protocols like **JAX-RS, JSON, HTTP** and **XML**.
- Hands-on knowledge of relational databases such as **Oracle, MySQL, PostgreSQL**, and NoSQL databases including **MongoDB, Cassandra, and DynamoDB**.
- Proficient in ORM tools: **Hibernate, JPA, Spring Data JPA** and **Django ORM** for seamless database interaction.
- Skilled in building and managing projects using **Maven** and **Gradle**, ensuring efficient dependency management and streamlined build processes.
- Comprehensive experience in **Spring Framework**, including **Spring MVC, Spring Boot, Spring Security, Spring JDBC, and Spring Data REST**, along with expertise in **Django** for building robust, scalable **web applications** and **RESTful APIs**.
- Extensive experience in building scalable and interactive single-page applications (SPAs) using **ReactJS** and **AngularJS**, ensuring high-quality performance and maintainability.
- Expertise in configuring and automating **CI/CD pipelines** using tools like **Jenkins**, integrated with **AWS** and **Azure** for cloud-based deployments.
- Experienced in unit testing and mocking frameworks such as **Jest, JUnit** and **Mockito** to ensure code quality, reliability, and comprehensive test coverage.
- Experienced in deploying, configuring, and managing applications on **Apache Tomcat**, ensuring high availability and optimal performance of web applications.
- Proficient in implementing **Log4j** for efficient logging, monitoring, and troubleshooting of applications, ensuring comprehensive tracking of system behaviours and performance issues for better maintainability, and debugging.
- Knowledgeable in **Agile methodologies** and **DevOps practices** for collaborative and efficient project management.
- Competent in dynamic **UI development** ensuring **cross-browser compatibility** and responsiveness.
- In-depth knowledge of integrating **REST** and **SOAP-based web services**.
- Experienced in handling **asynchronous data transfers** using **Ajax** for better user experiences.
- Expertise in database schema design, query optimization, and complex **SQL development** for enhanced performance.
- Expertise in dynamic application scaling with cloud platforms like **AWS** and **Azure**, leveraging services such as **DynamoDB, EC2, and S3**.
- Skilled in tools like **Swagger** and **Postman** for **API** documentation and testing.
- Experienced in **version control systems** like **Git** and collaborative tools such as **GitHub** and **Bitbucket** for efficient source code management.

- Skilled in **containerization technologies** like **Docker** and orchestration tools such as **Kubernetes** for deploying and managing applications in scalable environments.

TECHNICAL SKILLS

Frontend Technologies: HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, jQuery, ReactJS, AngularJS, Ajax

Backend Technologies/ Server-Side Frameworks: Java, Python, J2EE, EJB, Servlets, JSP, JSTL, Custom Tag Libraries, JAX-RS, JDBC, JNDI, JMS, JAXB, Spring MVC, Spring Security, Spring Boot, Spring JDBC, Spring Data JPA, Spring Data REST, Django, Django REST framework, Flask, Node.js, Express.js

Database Technologies: Oracle, MySQL, SQL, PostgreSQL, MongoDB, Cassandra, DynamoDB

Web Services & APIs: RESTful APIs, SOAP Web Services, JAX-RS, HTTP, JSON, XML

Build and Dependency Management: Maven, Gradle

Cloud Platforms: AWS, Azure

Testing Frameworks: JUnit, Mockito, Jest

DevOps & CI/CD Tools: CI/CD, Jenkins

Containerization & Orchestration: Docker, Kubernetes

Logging & Monitoring: Log4j, Apache

Frameworks & Libraries: Spring Framework, Hibernate, JPA, Django, Django REST framework, Flask

Additional Tools & Technologies: Swagger, Postman

WORK EXPERIENCE

Cleveland Clinic, Ohio, USA

Dec 2023 – Present

Java Full Stack Developer

Description: Cleveland Clinic is a globally renowned healthcare system, Ohio, recognized for its cutting-edge medical innovations and patient-centered care. As a Java Full Stack Developer, I am building scalable, high-performance applications using Java, Spring Boot, ReactJS, and RESTful APIs, supporting the digital transformation of healthcare services.

Responsibilities:

- Designed and maintained responsive front-end user interfaces using **HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, ReactJS**, and **jQuery** to deliver intuitive web applications.
- Developed dynamic and responsive front-end components using **AngularJS**, implementing two-way data binding, dependency injection, and custom directives to enhance application performance and user experience.
- Developed and integrated back-end services utilizing **Java, J2EE, EJB, Servlets, JSP, JSTL**, and **Custom Tag Libraries** to ensure scalability and robustness.
- Engineered database schemas and wrote complex **SQL queries** for various databases including **Oracle, MySQL, PostgreSQL, MongoDB, Cassandra**, and **DynamoDB** to optimize data storage and retrieval processes.
- Created and maintained **RESTful APIs** with **JAX-RS, JSON, XML**, integrating third-party systems for smooth data flow and interoperability.
- Integrated security and authentication features using **Spring Security, JSP**, and **JSTL** to ensure secure user access and data integrity.
- Partnered with **DevOps** teams to build and manage **CI/CD pipelines**, deploying applications to **AWS** using **Jenkins** for continuous integration and delivery.
- Deployed and maintained applications on **AWS** infrastructure, leveraging services such as **EC2, S3, Lambda**, and **RDS** to ensure scalability, availability, and security.
- Developed comprehensive **unit** and **integration tests** with **JUnit** and **Mockito**, ensuring robust and functional application code.
- Enhanced web application performance by utilizing technologies like **Spring Boot, Spring MVC, Spring JDBC, JPA, Hibernate**, and **Spring Data JPA** for efficient data handling.
- Implemented **Log4j** and other monitoring tools to log application behaviour, optimize performance, and troubleshoot issues effectively.
- Managed asynchronous data processing using **NodeJS, Express**, and **Ajax**, enabling real-time updates and improved user interactions.

- Worked closely with cross-functional teams to ensure seamless integration of front-end and back-end components using **Spring MVC, Hibernate, JPA, and JDBC** frameworks.

Environment: HTML/HTML5, CSS/CSS3, Bootstrap, JavaScript, TypeScript, ReactJS, AngularJS, jQuery, Java, J2EE, EJB, Servlets, JSP, JSTL, Custom Tag Libraries, Oracle, MySQL, PostgreSQL, MongoDB, Cassandra, DynamoDB, JAX-RS, JSON, XML, Spring Security, Jenkins, AWS, EC2, S3, Lambda, RDS, JUnit, Mockito, Spring Boot, Spring MVC, Spring JDBC, JPA, Hibernate, Spring Data JPA, Log4j, NodeJS, Express, Ajax.

Fifth Third Bank, Ohio, USA

Dec 2022 – Nov 2023

Java Full Stack Developer

Description: Fifth Third Bank is a leading financial services organization providing a wide range of banking, lending, and investment solutions. As a Java Full Stack Developer, my role involved designing and implementing efficient and secure banking solutions using Core Java, Spring Framework, React, and web services to ensure seamless system integration.

Responsibilities:

- Developed & maintained secure, high-performance web applications using **Java & Spring Boot** for scalable back-end services.
- Designed and integrated **RESTful APIs** to facilitate seamless communication between front-end and back-end systems.
- Built dynamic and responsive user interfaces with **HTML5, CSS3, JavaScript, ReactJS, and jQuery** to enhance user experience.
- Utilized **Spring MVC** for building web applications and managing server-side logic efficiently.
- Implemented **Spring Security** for robust authentication and authorization mechanisms to protect sensitive banking data.
- Developed and optimized database interactions using **Hibernate** ORM, ensuring smooth integration with relational databases like **MySQL, Oracle, and PostgreSQL**.
- Worked with **NoSQL databases** such as **MongoDB** and **DynamoDB** to store and manage unstructured data.
- Created and executed **unit tests** and **mocking** tests with **JUnit** and **Mockito** to ensure high-quality & reliable application code.
- Integrated **CI/CD pipelines** using **Jenkins** to automate testing, building, and deployment processes for continuous delivery.
- Deployed and managed applications on **Azure Cloud** to ensure scalability, security, and high availability of banking services.
- Utilized **Azure DevOps** for managing source code, automating build pipelines, and streamlining deployment processes, ensuring efficient collaboration and continuous integration.
- Worked with **Azure Cloud** technologies, including **Azure Storage, Azure SQL Database, and Azure App Services**, to manage data and streamline application hosting in the cloud environment.
- Designed and implemented **Azure Cloud-based microservices** architecture to ensure scalability and high availability of banking applications across multiple regions.
- Implemented data caching strategies using **Redis** or similar technologies to improve application performance and reduce database load for high-traffic banking operations.

Environment: Java, Spring Boot, RESTful APIs, HTML5, CSS3, JavaScript, ReactJS, jQuery, Spring MVC, Spring Security, Hibernate, MySQL, Oracle, PostgreSQL, MongoDB, DynamoDB, JUnit, Mockito, Jenkins, Azure Cloud, Azure DevOps, Azure Storage, Azure SQL Database, Azure App Services, Redis.

Aetna, Mumbai, India

May 2021 – July 2022

Java Full Stack Developer

Description: Aetna, a leading health insurance company, focuses on providing innovative healthcare solutions and services. As a Java Full Stack Developer, my responsibilities included creating robust and secure healthcare systems using object-oriented programming, backend frameworks, modern UI libraries, and API integration to enhance member services and streamline operations.

Responsibilities:

- Developed and maintained secure, scalable applications using **Java, Spring Boot, and Spring MVC**, and created **RESTful APIs** to support essential healthcare services and operations.
- Designed and implemented front-end functionality with **HTML5, CSS3, Bootstrap, JavaScript, TypeScript, and ReactJS** to deliver dynamic and user-friendly healthcare applications.
- Developed and maintained interactive front-end components using **AngularJS**, ensuring a responsive and dynamic user experience for healthcare applications while adhering to industry standards.
- Managed and optimized data storage and transactions in **Oracle, MySQL, PostgreSQL, and MongoDB**, ensuring efficient handling of large healthcare datasets while maintaining data integrity.

- Integrated **Spring Security** and secure communication protocols such as **JAX-RS** and **JDBC** to safeguard sensitive healthcare information and enforce stringent security standards.
- Built enterprise-level applications using **J2EE**, **EJB**, **JSP**, **JSTL**, and **Custom Tag Libraries**, increasing functionality and promoting the reuse of key components within the health insurance ecosystem.
- Automated build and dependency management processes using **Maven** and **Gradle**, ensuring consistency across different development and production environments.
- Deployed and managed healthcare applications on **AWS** cloud infrastructure, ensuring scalability, reliability, and optimized resource allocation for health services.
- Utilized a range of **AWS services** such as **EC2**, **S3**, **RDS**, and **Lambda** to design, deploy, and scale applications, achieving high availability, disaster recovery, and cost-effective solutions for health insurance services.
- Ensured the stability and quality of the application through comprehensive **unit testing** with **JUnit** and **integration testing** using **Mockito**, contributing to a robust healthcare platform.
- Implemented **CI/CD pipelines** with **Jenkins** to automate the integration, testing, and deployment of healthcare applications, reducing time-to-market and improving operational efficiency.

Environment: Java, Spring Boot, Spring MVC, RESTful APIs, HTML5, AngularJS, CSS3, Bootstrap, JavaScript, TypeScript, ReactJS, Oracle, MySQL, PostgreSQL, MongoDB, Spring Security, JAX-RS, JDBC, J2EE, EJB, JSP, JSTL, Custom Tag Libraries, Maven, Gradle, AWS, EC2, S3, RDS, Lambda, JUnit, Mockito, Jenkins.

Ikea, Mumbai, India

January 2020 – Apr 2021

Java developer

Description: IKEA, a global leader in home furnishings and retail, focuses on delivering innovative and sustainable solutions to customers worldwide. As a Java Developer, my responsibilities included in building efficient, high-performing applications using object-oriented programming, backend frameworks, and web service integration to optimize inventory systems and enhance customer support.

Responsibilities:

- Developed and supported enterprise-scale applications utilizing **Java**, **Spring Boot**, and **RESTful APIs**, enhancing retail operations and customer engagement solutions.
- Architected and optimized backend systems to handle large volumes of data, leveraging **Oracle**, **MySQL**, and **PostgreSQL** databases for efficient data management.
- Collaborated with cross-functional teams to integrate **AWS** cloud services, ensuring scalable, reliable, and secure deployment of retail applications.
- Enhanced application performance & user experience in **JavaScript**, **ReactJS**, & **TypeScript** for dynamic front-end interfaces.
- Applied strong security protocols, including **Spring Security** and **JAX-RS**, to protect sensitive customer and retail data.
- Streamlined build processes and managed dependencies effectively using **Maven** and **Gradle**, ensuring consistent workflows across all stages of development.
- Implemented comprehensive **unit** and **integration tests** with **JUnit** and **Mockito**, maintaining robust code quality and regulatory compliance.
- Integrated and maintained external services and **APIs**, ensuring smooth and secure data exchange between systems and third-party applications.
- Automated and optimized the **CI/CD pipelines** with **Jenkins**, enabling seamless continuous integration and fast deployment cycles for retail systems.
- Actively participated in **Agile development** cycles, working closely with business analysts, product managers, and QA teams to deliver solutions that meet business needs and regulatory standards.

Environment: Java, Spring Boot, RESTful APIs, Oracle, MySQL, PostgreSQL, AWS, JavaScript, ReactJS, TypeScript, Spring Security, JAX-RS, Maven, Gradle, JUnit, Mockito, Jenkins.
