PROFESSIONAL SUMMARY

Detail-oriented **Data Analyst** with **2 years** of experience specializing in healthcare claims analytics and payment optimization. Demonstrated expertise in developing scalable **Power BI dashboards**, performing end-to-end data wrangling using **SQL** and **Python**, and leveraging **Azure Data Factory** and **Synapse** for data integration. Skilled in creating actionable insights that enhance claims accuracy, detect fraud patterns, and improve provider cost transparency. Strong collaborator with cross-functional teams, delivering business-critical reports and visualizations in **Agile** environments.

TECHNICAL SKILLS	EDUCATION DETAILS
Data Visualization: Power BI, Tableau	Master's Degree: M.S. in Engineering Data Science
Programming: SQL, Python (Pandas, NumPy)	<i>University of Houston, Houston, TX – Expected: May 2025</i>
Data Wrangling: Power Query, Excel (Advanced)	Bachelor's Degree: B.Tech in Computer Science
ETL Tools: Azure Data Factory, SSIS	<i>SRM University-AP, Amravati, Guntur, India – Graduated: June 2022</i>
Databases & Cloud: SQL Server, Azure Synapse	
Analytics: DAX, RLS, Power BI Service	
Version Control: Git, GitHub	
Agile Tools: JIRA, Confluence	

PROFESSIONAL EXPERIENCE

Data Analyst || Client: Zelis, Hyderabad, India
Project: Claims Payment Analytics Platform
Description:
Developed a centralized reporting and analytics solution for Zelis, leveraging Power BI, Azure Data Services, and Python to enhance claims payment accuracy, detect fraud, and improve provider cost transparency.
Responsibilities:

- Designed and deployed Power BI dashboards for monitoring provider overbilling, claim payment accuracy, and cost trends.
- Utilized **Azure Data Factory** to orchestrate automated data pipelines from SQL Server, flat files (via SFTP), and third-party APIs.
- Integrated **Azure Synapse Analytics** to build a scalable data warehouse supporting multiple reporting use cases.
- Wrote complex **SQL queries** to join, filter, and aggregate large healthcare datasets to support claim-level analysis.
- Applied **Python (Pandas, NumPy)** for data transformation, cleansing, and validation before BI model ingestion.
- Created robust **DAX measures** and KPIs to support executive reporting on cost per member, provider benchmarking, and service utilization.
- Partnered with audit and compliance teams to develop fraud detection models and overpayment recovery reports.
- Implemented **row-level security (RLS)** and dataset refresh scheduling in Power BI Service.
- Delivered executive-level insights in monthly reporting decks and facilitated data-driven decision-making across business units.
- Maintained transformation logic documentation and version control via **Git/GitHub**.
- Participated in Agile sprint ceremonies: daily stand-ups, sprint reviews, retrospectives, and planning sessions.

July 2021 – July 2023
