SUMMARY

Results-driven Data Analyst with 4+ years of experience in transforming and migrating complex data. Expert at using SQL, Python, and advanced Excel to perform forensic analyses, document data transformations, and support modern data architectures. Proven success in optimizing ETL pipelines and ensuring data continuity through clear, cross-functional collaboration.

SKILLS

- **Data Analytics:** SQL, Python (Pandas, NumPy, Matplotlib, Seaborn), R, SAS
- **Data Warehousing:** Snowflake, Redshift, SQL Server, MySQL, PostgreSQL
- **ETL Tools:** Databricks, PySpark, PL/SQL, Oozie, Azure Data Factory, AWS Glue
- **Data Visualization:** Power BI, Tableau, Excel (Pivot Tables, Power Query, VLOOKUP)
- **Cloud Platforms:** AWS (S3, Redshift), Azure, GCP
- **Forecasting & Modeling:** Prophet, ARIMA, Random Forest, K-Means, Erwin
- **Governance & Compliance:** HIPAA, SOX – Audit Readiness, Automated Validation
- **Version Control:** Git, GitHub, GitLab
- **Project Management:** Agile, SDLC, Waterfall, JIRA

EXPERIENCE

Johnson & Johnson

Aug 2023 - Present

Business Data Analyst – Healthcare

Oklahoma City, OK

- Collaborated with cross-functional stakeholders to gather and refine business requirements, ensuring analytics initiatives were aligned with operational goals and compliance standards.
- Optimized SQL queries and utilized Python scripts to analyze over 5M patient records, enhancing data processing efficiency by 35% and supporting accurate data lineage tracing.
- Engineered HIPAA-compliant ETL pipelines on AWS to transition legacy data into modern architectures, reducing manual corrections by 90% and ensuring data continuity.
- Developed interactive Power BI dashboards that improved reporting efficiency by 40%, providing clear data transformation insights across 15 key performance indicators.
- Forecasted patient admissions using Prophet and ARIMA models, which reduced staffing inefficiencies by 30% and supported proactive decision-making.
- Implemented anomaly detection routines in Python, increasing data quality by 20% and assisting in forensic analysis of electronic health records.
- Resolved \$150K in claim discrepancies through Redshift-based reconciliation, documenting root cause analyses to promote transparent data transformation processes.
- Delivered predictive dashboards on readmissions and census forecasts to support leadership planning during data migration efforts.
- Automated BI report delivery with self-refreshing dashboards that reduced reporting lag from 3 days to 1 hour, ensuring timely communication of data insights.
- Facilitated Agile sprint retrospectives with clinical and IT teams to refine data product delivery and support continuous process improvements.

Tata Consultancy Services (TCS)

Feb 2021 - Jul 2022

Data Analyst

Hyderabad, India

- Partnered with finance leads and business teams to define analytics KPIs, report layouts, and audit requirements while ensuring clarity in data transformation logic.
- Streamlined ETL pipelines using Python and SQL to bridge legacy data repositories with modern data architectures, reducing reporting latency by 15 minutes and enhancing quality scores by 20%.
- Migrated over 1TB of data to AWS Redshift, facilitating data continuity and self-service BI adoption while supporting enterprise-level data transformation initiatives.
- Designed and maintained Tableau dashboards for portfolio KPIs, significantly enhancing investor decision-making with a 40% performance improvement.
- Developed robust SQL validation logic to prevent over \$2M in transactional inconsistencies, ensuring accurate and transparent data extraction and validation.
- Implemented time series models in Databricks to improve quarterly forecast alignment, demonstrating a strong analytical mindset in fast-paced environments.
- Identified \$300K in fraud patterns using statistical anomaly detection in R, underscoring meticulous attention to detail in data forensic analysis.
- Created compliance dashboards that reduced manual reporting time by 60%, thereby boosting operational efficiency during the data migration process.

- Conducted stakeholder training on dashboard use and data interpretation, enhancing both technical and non-technical communication regarding data transformation efforts.
- Maintained critical recovery workflows to eliminate SLA breaches during month-end financial cycles, ensuring continuous data availability and integrity.

Buzzworks

Aug 2020 - Jan 2021

Data Analyst Intern

Hyderabad, India

- Supported business and marketing analysts in transforming retail data into actionable insights.
- Diagnosed retail data issues using Python, increasing sales forecast accuracy by 12% for regional campaigns.
- Constructed data marts using snowflake/star schema, enabling self-service dashboards with 3-hour faster refresh times.
- Implemented HDFS ingestion using Oozie and Pig, reducing latency by 20%.
- Constructed PySpark pipelines to centralize POS data, removing 95% of weekly manual consolidation tasks.
- Applied clustering models (K-Means, RF) to segment customers, improving marketing ROI by 15%.
- Developed KPI dashboards in Power BI for sales and inventory teams, reducing reporting lag by 50%.
- Created A/B test reports to analyze promotions, boosting conversion by 10%.
- Authored data lineage maps and Python modules to standardize pipeline development.
- Participated in Agile ceremonies and sprint planning to improve analytics team delivery cadence.

EDUCATION

University of Central Missouri, Missouri, USA

Aug 2022 - May 2024

master's, industrial technology management

CERTIFICATION

- **SQL for Data Analytics:** Coursera
- **Power BI Data Modeling with DAX**
