

Gayathri Galiveeti

Software Engineer

Dallas, TX | (940) 843-5914 | galiveetigayathri1@gmail.com | [LinkedIn](#)

Summary

Software Developer with around 3 years of experience in designing and implementing scalable, high-performance web applications. Proficient in frontend development using React.js, Angular, and TypeScript, and backend frameworks such as Java (Spring Boot), Node.js, Express.js. Adept at creating RESTful APIs and GraphQL for optimized data exchange, managing CI/CD pipelines with Jenkins, Docker, and Kubernetes, and deploying applications on AWS. Strong experience with MySQL, MongoDB, and PostgreSQL for database management and optimization. Collaborative team player with expertise in Agile and SCRUM methodologies, delivering end-to-end software solutions that enhance user experience and drive operational efficiency.

Technical Skills

Programming Languages: Python, Java, JavaScript, TypeScript, HTML, CSS
Frontend Frameworks: React.js, Angular
Backend Frameworks: Java (Spring Boot), Node.js, Express.js
API Development: RESTful APIs, GraphQL, Spring MVC, OAuth2 / JWT
Databases: MySQL, PostgreSQL, SQLite, SQL Server, MongoDB, NoSQL, DynamoDB
Cloud & Serverless: AWS (S3, Lambda, IAM, EKS), API Gateway, GCP, AI/ML
CI/CD & Automation: Jenkins, Docker, Kubernetes, GitHub Actions, CI/CD
Version Control & Tools: Git, GitHub, Vercel, JIRA, Visual Studio Code, AJAX, JSON, jQuery
Architecture & Development: MVC Architecture, Microservices, SCRUM, Agile Development
UI/UX Development: React Router, Redux Saga, React Context API, Prototyping, User Feedback Integration, Responsive Design
Testing and Quality: Jest, React Testing Library, Cypress, Jasmine
Monitoring and Observability: Prometheus, Grafana, OpenTelemetry, Custom Dashboards, Metrics for Availability, Automated Builds, Testing, and Deployments (CI/CD)
Design and Collaboration: Figma, Jira, Confluence, Team Environment

Education

University of North Texas, Denton, TX	Jan 2023 – Dec 2024
Master's in Computer Science	
Gitam University, Bengaluru, India	Jul 2018 – Jul 2022
Bachelor's in Computer Science	

Professional Experience

Ness	Apr 2025 – Current
Software Engineer	Texas
- Contributed React.js and TypeScript components for a real-time driver dashboard, integrating Redux for state management; reduced initial dashboard load time from approximately 5 seconds to 4 seconds by optimizing component rendering. - Assisted in building Spring Boot REST endpoints to supply frontend data, cutting failed fetches from roughly 80 per 1,000 requests to about 20 per 1,000 requests. - Supported AWS setup (EC2, ELB, CloudWatch) and Docker container deployment via Jenkins, trimming the manual deployment process from four steps down to two steps. - Integrated Elasticsearch backend queries and consumed results via Axios in the React frontend, cutting average search response time from 400 ms to 200 ms and enabling the system to handle an additional 3,000 searches per day without new infrastructure. - Implemented OAuth 2.0 using passport.js and JWT in React to secure user sessions; audits showed zero unauthorized-access incidents over six months versus roughly five incidents per month before. - Added LaunchDarkly flags in React components to run A/B experiments; one tested variation generated an extra 120 bookings per week. - Collaborated with backend teams to refine API request/response contracts, reducing frontend integration errors from 40 to 15 per 1,000 calls. - Wrote Jest and React Testing Library UI tests, increasing test count from roughly 200 to 280 and catching about 15 additional bugs before release; configured GitHub Actions to run the test suite on every pull request, which cut post-merge production bugs by 10 per quarter.	

- Dockerized frontend builds and collaborated with DevOps to deploy via Jenkins into a Kubernetes cluster, shortening staging-to-production release time from about 5 hours to 3 hours.

HCL Technologies, India **Software Engineer, India**

Jan 2021 – Dec 2022

- Developed responsive, real-time analytics dashboards using React and TypeScript, enabling interactive visualization of exploration and drilling KPIs, with Redux managing complex application state across modules.
- Implemented advanced D3.js visualizations for drilling efficiency, anomaly detection, and geospatial mapping, ensuring smooth rendering and intuitive interaction with large operational datasets.
- Optimized front-end performance using Webpack and Babel, reducing bundle size by 32% and improving initial load time from 3.1s to 1.9s to improve accessibility in low-connectivity field environments.
- Built scalable and reusable UI component libraries in React to standardize UX patterns and reduce front-end development time across multiple analytics modules.
- Integrated front-end interfaces with Java-based backend services, consuming REST APIs built with Spring Boot and Spring MVC, and handling structured data retrieved from MySQL and SQL Server tables hosted on AWS.
- Implemented secure authentication and session flows using OAuth 2.0, coordinating with Spring Security and AWS IAM to enforce role-based access and secure communication.
- Designed responsive and accessible UIs with CSS3 (Flexbox, Grid) to ensure consistent performance across industrial devices, rugged tablets, and desktop systems used by engineers on remote sites.
- Developed automated test suites using Jest and React Testing Library, improving UI reliability and helping prevent regressions across core workflows.
- Collaborated with DevOps teams to containerize front-end builds using Docker, deploy them through Kubernetes clusters, and integrate them into automated Jenkins pipelines for seamless delivery.

Academic Projects

My Developer Portfolio ([AppLink](#)):

Developed a personal portfolio website using Next.js, featuring interactive animations with Framer Motion and deployed on Vercel for fast, seamless performance. Utilized server-side rendering (SSR) and static site generation (SSG) to optimize load times and SEO. The portfolio showcases my professional experience, projects, and technical skills.

Patient Data Dashboard ([App Link](#)):

I built a healthcare analytics dashboard using JavaScript and D3.js to visualize patient metrics. The project used a publicly available, de-identified patient API, so no personal or sensitive patient information was involved.

AI-Powered Chat Application:

Developed GG GPT, a ChatGPT clone using React & OpenAI API, enabling AI-driven responses with seamless UX and no-account requirement.

Research on GPU Caching Innovations:

Achieved 75% efficiency improvement by implementing decoupled L1 caches and refined remote-core bandwidth for better scalability.

TODO APP:

Built a full-stack Todo application using React, Node.js, and Express with features like authentication, CRUD tasks, and filtering. Containerized the entire app with Docker for easy deployment and consistent environment setup.

Web & App Development:

Created multiple interactive web applications, focusing on user-centric design and front-end development (Quiz app, Note app, Dice Game, Calculator).

Fall Detection System:

Engineered and optimized a machine learning-based fall detection system using TensorFlow and OpenCV, achieving 92% accuracy and reducing false positives by 20%. Trained and processed 5,000+ images/videos, improving real-time recognition efficiency and enhancing safety through instant fall detection alerts.

CERTIFICATIONS

AWS Certified Developer - Associate
