PROFILE SUMMARY

Over the past 1 year, I have been developing projects in AWS and Azure. I can confidently navigate the Linux command line and I can write scripts and automation in both bash and Python. I have created complex CICD pipelines and can comfortably create infrastructure using Terraform. I am eager to learn new things and apply the knowledge to my work. I am looking forward to working with you and contributing to your highly esteemed organization.

SKILLS

PROFESSIONAL SKILLS	AZD RDS Machine Learning Presentation Skills Linux Command Line Strategic Planning Bash Scripting Python Azure AWS AWS Lambda Powershell Terraform Networking Azure Devops Docker Azure Cosmos DB JIRA
TECHNICAL SKILLS	SQL MySQL T-SQL Git Github MS Excel Google Sheets Microsoft Entra ID
CERTIFICATIONS	AWS Certified Cloud Practitioner AWS Certified Solutions Architect – Associate (In progress) LPI Linux Essentials Security+ Network+ A+

WORK EXPERIENCE

IT Operations Specialist	CarolinaEast Health Systems New Bern, NC August 2023 – Present.
- Created, users, groups using Microsoft Entra ID, Entra Connect, connect sync to administer seamless single sign-on, pass-through authentication and reset user's password with Microsoft Active Directory. - Supervised nurses, physicians, newly employed colleagues on how to utilize the various software applications and hardware. - Achieved my goal of being customer friendly to thousands of end users by ensuring that they received high quality customer service which resulted in resolving 90% of ServiceNow incident tickets. - Trained new crew members in communication, transfer of files, various SLA, and customer service. - Ensured that all procedures to solving issues were documented to facilitate and enhance my learning procedures and solve issues fast. - Managed external developer engagements and solved complex technical connectivity issues.	
Help Desk Technician	Coastal Carolina Community College Jacksonville, NC August 2022 – August 2023
- Provided technical assistance for incoming queries and issues related to computer systems. - Collaborated with IT team members to identify system requirements and resolved all issues. - Utilized SCCM to install and update operating systems as required by company policies. - Trained users in software application installation, deployment, and management. - Maintained product and knowledge specification.	

PROJECTS

NAME OF PROJECT	Date
- I deployed a multi-tier WordPress service using Terraform. - This involved creating a VPC with public and private subnets. - An RDS instance and an EC2 instances were deployed in the private subnets to prevent direct access from the wider internet. - I installed and configured the LAMP stack and WordPress on the EC2 instance.	

George Koufie

- I then configured an Application Load Balancer (ALB) in the public subnet so that I can route requested traffic from the internet to my private WordPress service.
 - Connection between all services was controlled using security groups with the least permissive access in mind. These resources were created using a Terraform script I wrote.
- I created an autoscaling EC2 infrastructure to ensure that Apache Web service was self-healing and scalable.
 - This involved configuring Launch templates, UserData scripts, ALB, Target Groups, and CloudWatch Alarms to ensure scale-out and scale-in activities based on CPU metrics.
- I set up a multi-environment CICD pipeline to deploy applications to a development and production environment.
 - My code was stored on GitHub, and I configured a pipeline with CodePipeline.
 - To ensure seamless deployment, I utilized CodeDeploy to effectively deploy my code across EC2 instances in multiple environments.
- To ensure the AWS environment was cost optimized I created an EC2 Instance scheduling service.
 - I used a combination of CloudWatch Event triggers and Lambdas to schedule dev instances to turn off at 6pm and turn back on at 8am Monday-Friday.
 - By doing so, I was able to prevent instances from running outside of working hours, effectively reducing EC2 costs.
