

GHANA SHYAM KUTALA

ghanashyamkutala@gmail.com | (984)-895-3161 | Wichita, Kansas 67208

Summary

Highly motivated employee with desire to take on new challenges. Strong work ethic, adaptability, and exceptional interpersonal skills. Adept at working effectively unsupervised and quickly mastering new skills.

Experience

Software Engineer-Intern | Technology Crest Corporation - Fair Oaks, CA | 10/2023 - 01/2024

- Developed ETL processes using SSIS in SSMS for efficient data extraction, transformation, and loading.
- Collaborated on database management tasks, including design, optimization, and querying.
- Assisted in the development of new database management tools or software to improve efficiency and accuracy in data extraction, transformation, and loading processes.
- Implemented advanced data cleansing techniques within ETL processes to enhance data quality and integrity.
- Contributed to database performance tuning efforts by analyzing query execution plans and implementing indexing strategies.
- Played a key role in defining and refining target market segments based on market research findings, driving targeted marketing campaigns.
- Engaged in requirements gathering and user feedback sessions to inform the design and functionality of database management tools.
- Collaborated with software developers to integrate newly developed database management tools into existing systems, ensuring seamless functionality and compatibility.
- Provided technical support and troubleshooting assistance to end-users for database management tools, ensuring optimal utilization and effectiveness.

Data Scientist -Intern | AI Variant - Bangalore, India | 04/2022 - 07/2022

- Assisted in AI-driven data mining initiatives, contributing to sentiment analysis of Twitter tweets under the guidance of senior team members.
- Participated in leveraging machine learning algorithms to process and derive sentiment insights from datasets, gaining exposure to innovative methodologies and techniques.
- Supported the identification and evaluation of new data sources, contributing ideas and insights to enhance AI models and improve sentiment analysis accuracy.
- Collaborated with team members on designing and testing data processing pipelines, gaining hands-on experience with scalable and efficient data management practices.
- Contributed to testing and validation procedures for sentiment analysis models, learning to assess performance and reliability in real-world scenarios.
- Assisted in the preparation of reports and presentations summarizing findings from sentiment analysis projects, under supervision.

- Engaged in research activities related to natural language processing and sentiment analysis, learning about current trends and advancements in the field.
- Received mentorship from senior team members, acquiring knowledge and skills in machine learning techniques and data analysis best practices.
- Supported collaborative efforts with external partners and vendors, gaining exposure to professional networking and collaboration opportunities.
- Stayed updated on industry trends and developments in AI and machine learning, actively seeking learning opportunities and professional growth experiences.

Education and Training

WICHITA STATE UNIVERSITY | Wichita, KS | Expected in 05/2024

Master of Science in Data Science

GPA: 3.6/4.0

CHAITANYA DEGREE COLLEGE

Bachelor of Science: Mathematics, Statistics and Computer Science

GPA: 8.5/10

Certifications

- Machine Learning with python - IBM certified.
- Azure Fundamentals (AZ-900)
- React JS- Complete Guide for Frontend Web Development -Udemy

Projects

Personalized Housing Recommendation System Using Machine Learning

- Conducted an in-depth data preprocessing phase, encompassing data cleaning, feature engineering, and normalization, to ensure high-quality data suitable for modeling.
- Employed various machine learning models, including decision trees, random forests, and gradient boosting machines, to predict housing preferences based on user input.
- Integrated geospatial analysis techniques to account for location-based preferences and proximity to amenities, thereby enhancing recommendation accuracy and relevance.
- Carried out comprehensive testing and validation procedures to evaluate model performance and fine-tune algorithms for optimal results.
- Utilized survey data collection methods to gather input from users, ensuring that recommendations were personalized to individual preferences.
- Presented project findings and outcomes to stakeholders, showcasing the system's effectiveness in providing tailored housing recommendations and its potential to improve the housing search experience for users.

Sports Enrollment Analysis for Adult Programs

- Utilized Python tools to conduct comprehensive data analysis, optimizing sports schedules based on participant enrollment trends and preferences.
- Identified high-demand sports activities through data-driven insights, enabling targeted scheduling and resource allocation to maximize program effectiveness.
- Developed interactive dashboards using Python libraries for clear visualization of enrollment data, facilitating informed decision-making by program coordinators and management.
- Collaborated closely with stakeholders to gather requirements and ensure alignment of scheduling strategies

with program goals and participant interests.

- Enhanced sports program planning and engagement by leveraging data-driven insights to tailor offerings, resulting in increased enrollment and participant satisfaction.

Water Potability Prediction and Quality Assessment

- Conducted comprehensive water quality analysis using Python tools such as Pandas and Matplotlib, examining various parameters and trends.
- Enhanced potability prediction models through advanced data processing techniques, improving the accuracy of predictions, and ensuring safe water consumption.
- Employed a diverse range of machine learning models, including decision trees, random forests, and logistic regression, to assess water quality and predict potability with greater precision.
- Identified key factors affecting water quality through rigorous analysis and feature engineering, providing valuable insights for stakeholders and policymakers.
- Contributed to advancements in water safety by improving potability prediction accuracy, leading to informed decision-making and better resource allocation for water treatment and management initiatives.

Hotel rating classification

- Successfully led a project aimed at enhancing customer satisfaction and improving the accuracy of hotel ratings.
- To train models that accurately predicted hotel ratings based on review text.
- Conducted feature engineering, including the extraction of relevant features such as sentiment scores, review length, and keywords, to enhance the performance of the classification models.

Restaurant revenue prediction

- Led a project to create a strong model for improving financial planning and decision-making processes.
- Employed regression techniques like Linear Regression and Random Forest Regression to develop precise models predicting future revenue using diverse inputs.
- Utilized SPSS software for data analysis and modeling in this project.
- Collaborated with a team to gather and analyze data, ensuring accuracy and relevance of the forecasting models.
- Contributed to enhancing financial strategies by delivering reliable forecasts, supporting informed decision-making for business growth.

Suitable soil for Suitable crops

- Conducted a study on how soil composition influences crop growth to improve farming practices.
- Used Decision Trees, Random Forests, and Support Vector Machines to classify soils and determine which crops they're best suited for.
- Analyzed soil properties like pH and nutrients to understand how they affect crop suitability.
- Identified key factors influencing crop growth to help farmers make better planting decisions.
- Contributed to advancing farming techniques by combining machine learning with soil analysis for smarter crop selection and soil management.
