## Education

### Marist University

Aug 2021 – May 2025

BS in Computer Science

GPA: 3.4/4.0

- **Minors:** Interactive Media, Information Technology, Information Systems
- **Relevant Courses:** Software Development I & II, Game Design I & II, Computer Organization and Architecture, Database Management, Computer Graphics, Data Communications & Networks
- **Awards:** Dean's List, Cum Laude

## Tech Stack

**Programming Languages:** Python, C++, Java, C#, SQL, JavaScript, TypeScript, PHP, HTML/CSS, Bash  
**Frameworks & APIs:** React, Node.js, RESTful APIs

**Data Analysis & ML:** Pandas, NumPy, Matplotlib, Scikit-learn, PyTorch, Tableau

**Tools & Platforms:** Git, Jupyter Notebook, Docker, Visual Studio, Unity, Godot, VMWare, Wireshark, Excel

**Networking:** LAN/WAN, VLANs, TCP/IP, DHCP, Subnetting, Cisco (Routers & Switches), OSPF, BGP, RDP, Juniper (Switches)

## Experience

### Student Developer – High School Mentorship Program

Bellmore, NY

Mepham High School

Oct 2020 – May 2021

- Developed a web-based calendar platform adopted by 3 schools, streamlining event announcements.
- Integrated Google Cloud services for scalable hosting and secure authentication, enabling 100+ users.
- Designed a responsive user interface with HTML, CSS, and JavaScript, improving accessibility on desktop and mobile devices.

### Student Assistant

Poughkeepsie, NY

Marist University

Sep 2021 – May 2025

- Supported the Dean of Computer Science with department operations, event preparation, and tech support.
- Represented the department at open houses, presenting to 500+ students and families.
- Expanded departmental visibility through targeted social media outreach.

## Projects

### 422-tsiraM: Virtual 6502 Processor

[github.com/GioIsles/422-tsiraM](https://github.com/GioIsles/422-tsiraM)

- Engineered a virtual 6502 processor in TypeScript/Node.js, accurately simulating CPU instructions for debugging and educational use.
- Tools Used: TypeScript, Node.js

### Capping Project: Album Review Website

[github.com/zsloan1499/Capping](https://github.com/zsloan1499/Capping)

- Built a full-stack album review web app using React.js and MongoDB, supporting CRUD operations and user authentication. Designed RESTful APIs and optimized queries, reducing page load time.
- Tools Used: React.js, MongoDB

### Advanced Unity Game Project

[github.com/Marist-CMPT-GameProg/GRaia](https://github.com/Marist-CMPT-GameProg/GRaia)

- Designed and developed a 2D game in Unity (C#), implementing physics-based mechanics, UI systems, and core gameplay loops.
- Tools Used: Unity, C#

### Movie Recommendation Project

[github.com/GioIsles/MovieDatabase](https://github.com/GioIsles/MovieDatabase)

- Built a content-based recommendation system leveraging TMDb API and Python (pandas, scikit-learn).
- Tools Used: Python, pandas, scikit-learn, Streamlit, TMDb API
