<https://github.com/Girishkancharla>

Summary

Data Science professional with solid experience in data analysis, process improvement, and quality assurance. Demonstrated expertise in automating test cases and enhancing data accuracy using Python, SQL, and related tools. Skilled in data extraction, cleansing, and modeling, with a strong focus on driving efficiency and supporting decision-making. Eager to apply these analytical capabilities in managing master data within an ERP environment.

Education

University of Central Oklahoma (UCO)

Master of Science, Data Science (GPA: 3.30/4)

Aug 2023 - May 2025

Edmond, Oklahoma

SASTRA Deemed to be University

Bachelor of Technology (Honours), Aerospace Engineering (GPA: 3.39/4)

Jul 2018 - Jul 2022

Thanjavur, India

Work experience

BELL, UCO | Learning Facilitator

Aug 2023 - May 2025

- Tutored 50+ students in Mathematics and Science, improving average test scores by 15%.
- Fostered a collaborative learning environment, increasing student participation by 25%.

UCO | Research Assistant

Jan 2025 - Feb 2025

- Developed Python code for 4D-CT image registration, enhancing medical imaging analysis.
- Generated displacement vector fields to support medical diagnostics, improving accuracy by 15%.

Cognizant | Program Analyst trainee

Mar 2022 - Jul 2022

- Completed a 4-month QEA internship focused on software testing and quality assurance, gaining hands-on experience in improving software reliability.
- Automated 20+ test cases, reducing manual effort by 40% and improving efficiency.

Projects

Vehicle Inventory Management System

- Developed a C++ based application using data structures and OOP principles to manage vehicle inventory, enabling add, search, update, and delete operations with persistent data storage in VehicleRecords.txt.

Analysis of Mobile Device Patterns and User Behavior Classification

- Conducted Data cleaning, statistical analysis on 700 mobile users, identifying trends in app usage, battery drain, and data consumption, and built a regression model to predict app usage time.

Nine Men's Morris Game

- Developed an AI-based implementation of Nine Men's Morris, implementing game mechanics like piece placement, movement, and mill detection using Python.

Technical skills

- **Programming Languages:** Python, Java, C/C++, R, MATLAB
- **Machine Learning:** Regression, Classification, Clustering, Random Forests, Boosting, SVM, Decision Trees
- **ML Tools:** PyTorch, TensorFlow, Keras, NumPy, Pandas, scikit-learn, Matplotlib
- **Web Development:** HTML, CSS, JavaScript
- **Big Data:** SQL, Hadoop, Spark
- **Data Visualization:** Tableau, Power BI, Excel
- **ERP & Data Management:** SAP, ERP, Data Management
- **Data Processing & Analysis:** Data Cleansing, Data Preparation, Data Extraction, Performance Analysis

Certification

- **IBM Data Science Specialization:** Coursera June 2023

Awards

- UCO President's Honor Roll Fall 2024
