

Gnanasai Rallapalli

Java Full Stack Developer

Overland Park, KS | (913) 238-7860 | gnanasaira@outlook.com | [LinkedIn](#)

SUMMARY

Java Full Stack Developer with 4+ years of experience in Java, Python, TypeScript, JavaScript, C#, VB.NET, and .NET, skilled in building scalable applications and transforming legacy monoliths into cloud-native microservices to reduce downtime and speed deployments. Proficient in designing secure, high-throughput APIs using Spring Boot, JWT, and OWASP standards, and optimizing SQL/T-SQL queries for performance. Experienced in developing responsive frontends with React.js and Angular, automating CI/CD pipelines with Docker, Kubernetes, and Jenkins, and leveraging AWS and Azure containerization for reliable deployments. Strong collaborator in Agile teams, mentoring peers, enforcing coding standards, and championing TDD to improve code quality.

SKILLS

Programming Languages: Java 8/11+, Python, TypeScript, JavaScript, SQL, T-SQL, C#, VB.NET

Backend: Spring Boot, Hibernate, J2EE, RESTful APIs, Microservices architecture, GraphQL, .NET

Frontend: React.js, Redux, Angular, HTML5, CSS3, Bootstrap

Cloud Platforms & Services: AWS (Lambda, EC2, API Gateway, Serverless), Azure DevOps, OpenShift

Databases: MySQL, PostgreSQL, MongoDB, Oracle, SQL Server, MS SQL Server

Testing & Monitoring: JUnit, Selenium, Mockito, TestNG, Test-Driven Development (TDD), AppInsights, ELK Stack

DevOps & Collaboration: Jenkins, Git, GitLab CI, Azure Pipelines, Docker, Kubernetes, Maven, Gradle, Jira, Confluence

Other: Agile/Scrum methodologies, Technical documentation, API specifications, Query optimization, caching strategies, Code reviews, coding standards, application tuning, architecture guidelines, API Security (Spring Security, JWT, OWASP standards)

EXPERIENCE

Java Full Stack Developer | *PNC Financials*

Feb 2025 – Present

- Designed and implemented scalable, full-stack solutions using Java, Hibernate, Microservices, GraphQL, and modern frontend frameworks such as Angular, React.js, and Redux, improving application responsiveness and user engagement.
- Led migration of a legacy J2EE monolith to microservices with Spring Boot and Docker on OpenShift and AWS cloud, reducing downtime by 40% and boosting deployment speed and scalability for trading and payment platforms.
- Architected secure RESTful APIs with Spring Security, JWT, and OWASP secure coding standards, integrating third-party financial data providers, payment gateways, and ERP systems, improving data flow while minimizing errors and security risks.
- Optimized SQL queries and database schemas across Oracle, SQL Server, and PostgreSQL, significantly enhancing query performance and ensuring reliable handling of large volumes of financial transactions and risk data with minimal latency.
- Developed frontend apps with TypeScript, JavaScript, HTML5, CSS3, and Bootstrap, achieving high test coverage using React Testing Library and Mockito; optimized performance and monitoring to reduce incident resolution time in banking portals.
- Automated and optimized CI/CD pipelines with Jenkins, GitLab CI, Kubernetes, and container orchestration, accelerating release frequency by 3x, reducing manual errors, minimizing rollback incidents, and increasing release cadence by 50%.
- Collaborated with Agile teams using Jira, Confluence, and Scrum, enhancing sprint velocity, release predictability, and communication; mentored juniors and led code reviews, promoting design patterns and test-driven development (TDD).

Software Engineer | *Avenir Technologies*

Sep 2019 – Jul 2023

- Built scalable backend and integrated applications with Java 11, Spring Boot, Hibernate, Angular, C#, and .NET, boosting API response times by 35% through query optimization, caching, and modern frameworks.
- Led legacy system modernization by refactoring VB.NET and Web Forms into JavaScript and TypeScript frameworks, optimizing performance, while designing secure RESTful APIs with authentication and authorization to enhance security and compliance.
- Developed advanced T-SQL scripts and optimized MS SQL Server queries, significantly reducing execution times, and built Python backend and automation solutions to boost data processing efficiency and streamline workflows.
- Championed test automation and test-driven development (TDD) using JUnit, Selenium, and TestNG, increasing code coverage to 85% and boosting overall software reliability and stability.
- Spearheaded cloud-native development and CI/CD pipelines on AWS serverless architectures and Azure DevOps, leveraging Docker containers, Kubernetes, and Azure Pipelines to optimize cloud resource usage and reduce deployment times by 40%.
- Collaborated with UI/UX, DevOps, and business analysts using Agile/Scrum and Jira to translate requirements into technical solutions, significantly improving sprint velocity and consistently delivering key features ahead of schedule.
- Resolved production issues with AppInsights and ELK stack, reducing downtime and improving reliability, while helping define coding standards, architecture guidelines, and software design principles that boosted team productivity and code quality.

EDUCATION

Master of Science in Computer Science | *University of Central Missouri*
