Senior Business Data Analyst

Professional Summary:

- 9+ years of experience as a Senior Business Data Analyst across finance, healthcare, and retail domains.
- Proficient in SQL, Python, R, and SAS for advanced querying, modeling, and statistical analysis.
- Built predictive and ML models using TensorFlow, Scikit-learn, XGBoost, and CatBoost for growth and personalization.
- Designed interactive dashboards and KPI scorecards in Power BI, Tableau, and Looker Studio for executive insights.
- Conducted EDA with pandas and NumPy, identifying anomalies to improve decision-making.
- Managed scalable data warehousing with Azure Synapse, AWS Redshift, BigQuery, and Snowflake.
- Automated ETL pipelines using Airflow, dbt, and Azure Data Factory, reducing manual reporting.
- Applied NLP techniques with NLTK and spaCy for sentiment and feedback analysis.
- Delivered self-service analytics with Power BI DAX and Tableau governance for secure BI adoption.
- Optimized workflows with GitHub Actions and CI/CD pipelines, improving analytics delivery.
- Collaborated in Agile environments using JIRA, Confluence, Trello, and Microsoft Teams.
- Performed variance, profitability, and forecasting analysis with SQL, R, and Excel (VBA, Power Query).
- Built real-time dashboards integrating APIs, Power BI, and Python Flask for operational monitoring.
- Developed recommendation systems using ML algorithms to support customer personalization.
- Utilized Alteryx, SharePoint, and Slack for process automation and team collaboration.
- Conducted data mining with clustering and classification techniques in Python.
- Implemented BI governance with Power BI Service and Tableau Server, ensuring role-based access.
- Created business workflows and process documentation using Visio and Confluence.
- Ensured version control and collaboration using Git and GitHub.
- Stayed current with AI, cloud analytics, and visualization trends, applying innovations to business strategy.

Technical Skills:

- **Business Analysis:** SQL, Business Analyst, Confluence, JIRA, Lucidchart, AGILE
- **Data Analysis:** SQL, Python, R, MATLAB, SAS, Statistical Analysis
- **Predictive Modeling:** Python, MATLAB, SAS
- **Data Visualization:** Tableau, Power BI, d3.js
- **Documentation:** Microsoft Visio, Excel, PowerPoint, SharePoint, GIT
- **Collaboration:** Microsoft Teams, Slack, Trello, Webex, GIT
- **Project Management:** Gantt, BPMN, AGILE/SCRUM, Trello

PROFESSIONAL EXPERIENCE:

Client: Securian, Scottsdale, AZ

Dec 2023 to till date

Role: Sr. Business Data Analyst

Roles & Responsibilities:

- Conducted advanced analysis using SQL, Python, and R, delivering insights for executive decision-making.
- Built machine learning forecasting models with Python, TensorFlow, and Scikit-learn to predict sales and financial outcomes.
- Designed interactive dashboards in Tableau, providing real-time KPI visibility for business stakeholders.
- Performed data wrangling and preprocessing with SQL, Snowflake, and Databricks, ensuring high-quality datasets.
- Implemented AWS Glue pipelines and automated workflows with Airflow/dbt, improving data ingestion and reporting.
- Developed real-time analytics solutions using Kafka and Spark, enhancing monitoring of operational metrics.
- Optimized AWS Redshift queries and S3 data storage, improving performance and cost efficiency of reporting pipelines.

- Designed Tableau data models and calculated fields, ensuring accurate KPI tracking and visual consistency across dashboards.
- Automated real-time monitoring dashboards by integrating AWS Lambda with Tableau, enhancing operational visibility.
- Created competitive analysis frameworks with SQL and Python, highlighting market trends for strategic planning.
- Conducted sentiment analysis using Python NLP frameworks to evaluate customer feedback and behavior.
- Built executive dashboards in Looker and Tableau, improving transparency of KPIs across business units.
- Utilized Alteryx and KNIME for processing automation and advanced analytics across multiple domains.
- Applied data governance practices with Collibra and Alation, ensuring compliance with enterprise standards.
- Conducted exploratory data analysis with pandas, NumPy, and Matplotlib, uncovering process optimization opportunities.
- Delivered risk assessment and fraud detection models using Python, PySpark, and AWS SageMaker.
- Developed predictive churn models with Scikit-learn, enabling proactive retention strategies.
- Presented executive-ready insights via Tableau Storytelling and PowerPoint, supporting strategic decisions.
- **Environment:** SQL, R, SWOT analysis, Gantt charts, Trello, Webex, Power BI, SQL Server, JIRA, Confluence, GIT, Microsoft Teams, Slack.

Client: CVS Health, Woonsocket, RI

Sep 2021 to Nov 2023

Role: Business Analyst

Roles & Responsibilities:

- Defined and analyzed business requirements using SQL and Snowflake, optimizing data-driven strategies and workflows.
- Delivered actionable insights with Power BI dashboards, supporting executive decision-making.
- Utilized Python and R for forecasting, statistical modeling, and business performance evaluations.
- Built and automated ETL pipelines with Alteryx, Apache Airflow, and Azure Data Factory for seamless reporting.
- Conducted A/B testing and experimental design in Python and Databricks, improving customer experience and processes.
- Performed root cause analysis with SQL and BigQuery to identify cost reduction and efficiency opportunities.
- Designed business process models in Lucidchart and BPMN, streamlining cross-functional workflows.
- Applied data governance frameworks with Collibra and Informatica, ensuring compliance with enterprise standards.
- Created predictive models in Python with Scikit-learn and XGBoost, driving revenue growth and operational efficiency.
- Facilitated sprint planning and Agile ceremonies using JIRA, Confluence, and Microsoft Teams.
- Built data ingestion workflows with Azure Data Factory, reducing latency in enterprise reporting.
- Designed Power BI governance frameworks with row-level security and role-based access for secure analytics.
- Partnered with finance and healthcare stakeholders to deliver self-service analytics, improving adoption of Power BI and Azure solutions.
- Conducted UAT with Azure DevOps Test Plans, validating enhancements against business needs.
- Managed documentation and reporting with SharePoint and Confluence, ensuring transparency and knowledge sharing.
- Delivered scenario analysis and forecasting with Excel and Python, enabling informed strategic planning.
- Developed KPI monitoring frameworks in Power BI and Looker, providing near real-time performance tracking.
- Led stakeholder workshops and requirement sessions with Miro and Zoom, aligning teams on data strategies.
- **Environment:** SQL, JIRA, BPMN, Lucidchart, SharePoint, Power BI, Confluence, Microsoft Visio, Microsoft Teams, GIT, SWOT analysis, Webex, R, Trello, Microsoft PowerPoint.

Client: ManTech, Herndon, VA

Dec 2019 to Aug 2021

Role: Business Intelligence Analyst

Roles & Responsibilities:

- Managed and delivered multiple business intelligence initiatives, applying SQL-based analyses to enhance reporting services and support enterprise-wide decision-making.

- Designed and developed interactive dashboards in Power BI, enabling stakeholders to visualize data trends, monitor KPIs, and derive actionable insights for strategic planning.
- Partnered with cross-functional teams in business and IT, leveraging Agile methodologies to prioritize requirements, managing user stories, and ensuring project adaptability.
- Authored detailed technical specifications and documentation in Confluence, bridging the gap between business needs and technical implementation.
- Applied Agile practices to rapidly adapt to changing requirements, ensuring high-quality deliverables and maintaining stakeholder confidence.
- Implemented project tracking and progress reporting through JIRA, improving transparency, accountability, and on-time task completion.
- Conducted large-scale data analysis with SQL, producing operational and financial insights that influenced business strategies.
- Created tailored Power BI visualization solutions, simplifying complex datasets into intuitive dashboards for leadership review.
- Established robust data validation and quality assurance practices in SQL, safeguarding the accuracy and integrity of enterprise reporting.
- Improved collaboration and team communication by integrating tools like Slack and Microsoft Teams, ensuring smooth coordination across departments.
- Developed performance metrics and analytical models in R, enabling project impact measurement and process optimization.
- Applied Git version control for managing analytical code and documentation, ensuring consistency and traceability across development cycles.
- Facilitated and led Agile sprint planning sessions and retrospectives, driving team alignment and iterative improvements.
- Used Excel advanced functions for data manipulation, modeling, and business performance tracking.
- Prepared executive-ready PowerPoint presentations and reports, clearly summarizing project results and analytics for senior leadership.
- Translated business requirements into UML and BPMN models, enhancing system design clarity and aligning IT solutions with business processes.
- Applied statistical analysis in R to evaluate business trends, optimize information services, and support long-term strategic decisions.
- **Environment:** SQL, Power BI, AGILE, Confluence, JIRA, Slack, R, GIT, Microsoft Excel, Microsoft PowerPoint, UML, BPMN, Microsoft Teams.

Client: Impetus Technologies, Hyderabad, India

Apr 2017 to Aug 2019

Role: business analyst

Roles& Responsibilities:

- Analyzed business requirements and technical specs with SQL, enhancing system functionalities and user satisfaction.
- Conducted comprehensive SQL analysis to identify trends, support strategic decisions, and optimize business outcomes.
- Developed use cases and managed validations through JIRA, including UAT testing, ensuring system enhancements met criteria.
- Documented and collaborated using Confluence and SharePoint, maintaining transparency and accessibility for stakeholders.
- Created business process models with Visio, UML, BPMN, and Lucidchart, streamlining workflows and system integrations.
- Led Agile/Scrum sessions with JIRA and Microsoft Teams, adapting rapidly to change and improving delivery efficiency.
- Managed project schedules and workflows in Microsoft Project, ensuring milestones and deliverables were met.
- Applied data visualization in Power BI for simplified interpretation of complex datasets and KPI monitoring.
- Performed statistical analysis with R, providing quantitative insights for system design and decision-making.
- Maintained version control and documentation with Git, ensuring accuracy and collaboration in development.

- Coordinated team communication through Microsoft Teams and Webex, driving alignment across distributed teams.
- Streamlined requirement gathering with Lucidchart, improving clarity and project efficiency.
- Prepared impactful stakeholder presentations and training materials in PowerPoint, supporting adoption of new systems.
- Implemented validated process enhancements based on business needs, optimizing efficiency and integration.
- Facilitated cross-functional workshops to align requirements, improving delivery of business and system updates.
- **Environment:** SQL, JIRA, Microsoft Visio, UML, BPMN, SharePoint, Confluence, Lucidchart, Microsoft Teams, GIT, Microsoft Project, PowerPoint, Agile/Scrum, R, Power BI, Webex.

Client: Citicorp services India pvt limited, Chennai, India

Nov 2015 to Apr 2017

Role: Business Analyst

Roles & Responsibilities:

- Conducted data trend analysis using SQL and statistical tools, providing insights that guided business strategy and decision-making.
- Developed predictive models using Python and MATLAB to forecast business scenarios and enhance strategic planning.
- Created interactive dashboards and reports in Tableau, enabling stakeholders to visualize data trends and make informed decisions.
- Facilitated requirement gathering sessions using Microsoft Excel, ensuring comprehensive documentation of business needs.
- Collaborated using d3.js to develop custom data visualizations, enhancing the presentation and understanding of complex data.
- Utilized SAS for in-depth statistical analysis, supporting data-driven decisions in business operations and planning.
- Managed project documentation and communications using Microsoft SharePoint, centralizing information and enhancing team collaboration.
- Implemented business recommendations based on data insights and analyses, using Python to automate data processes and improve efficiency.
- Employed MATLAB for complex mathematical modeling, aiding in the analysis and simulation of business processes.
- Coordinated and led team meetings using Microsoft Teams, fostering effective communication and project synchronization.
- Designed and executed data validation tests using SQL, ensuring the accuracy and reliability of business reports.
- Developed business analysis and reporting processes using Excel, streamlining data manipulation and insight generation.
- Utilized predictive modeling to provide foresight into business conditions, enhancing strategic decisions with Python and SAS.
- Documented and analyzed business processes using Visio, clarifying operational requirements and improving system designs.
- Conducted workshops and training sessions to enhance stakeholder understanding of new tools and dashboards, using Tableau and Webex.
- **Environment:** SQL, Python, MATLAB, Tableau, Microsoft Excel, d3.js, SAS, Microsoft SharePoint, Microsoft Teams, Visio, Webex.

Education:

- Bachelor of Technology (B. Tech) in Information Technology from JNTUH, Hyderabad, Telangana, India. - 2016
