

Gokulkrishna Surianarayanan | Data Analyst

Richardson, Texas | (469)-867-5631 | BSGokulakrishna@gmail.com | LinkedIn | GitHub

OBJECTIVE

Results-driven Data Analyst with 3+ years of experience transforming complex datasets into actionable insights that support business strategy, operational efficiency, and performance improvement. Skilled in data modelling, SQL development, dashboarding, and cloud-based analytics across healthcare and enterprise environments. Strong background in requirement gathering, KPI reporting, ETL automation, and cross-functional collaboration. Experienced in predictive analytics and machine learning tools as part of broader analytical solutions.

EDUCATION:

Master of Science in Business Analytics & AI, University of Texas at Dallas, USA GPA 3.4/4.0

| May 2025

TECHNICAL SKILLS

- **Data Analysis & Programming:** Python, R, SQL, SPSS, Excel (Advanced)
- **Business Intelligence & Tools:** Power BI, Tableau, Looker, Google Data Studio, DAX, Power Query
- **Databases & ETL:** SQL Server, Snowflake, Big Query, SSIS, Talend, Microsoft Access, ETL Workflows
- **Cloud & Big Data:** AWS (Redshift, Glue, Athena, S3), Azure (Databricks, Synapse), Google Cloud Platform
- **Analytics & Modelling:** Forecasting, Regression, Time Series (ARIMA, Prophet), Hypothesis Testing, A/B Testing, Predictive Modelling, Statistical Analysis, Data Processing
- **Business Analyst Tools:** Jira, Confluence, MS Visio, Lucid chart, Agile/Scrum Frameworks, Requirement Gathering, Process Mapping
- **AI/ML Exposure:** Predictive Analytics, Feature Engineering, Model Evaluation, Time Series Forecasting, Clustering (K-Means), Basic NLP (TF-IDF), Scikit-Learn Modelling, Cross-Validation.
- **Other Skills:** Dashboard Storytelling, Data Validation, Data Quality, Stakeholder Communication

EXPERIENCE:

Data Analyst, Community Dream Foundation, USA

| May 2025– Present

- Analyzed large datasets to identify trends, recurring issues, and opportunities for process improvement.
- Designed Power BI dashboards to visualize claim cycles, financial metrics, and operational KPIs for leadership review
- Automated routine reporting, ETL workflows, and data-quality checks using Python and SQL, improving accuracy and reducing manual effort.
- Utilized basic predictive analytics to support early identification of high-risk claims categories.
- Built deep learning models with **TensorFlow** and **Keras** on **AWS SageMaker**, improving model precision and enabling proactive claim evaluations.

Data Analyst, CVS Health, USA

| May 2024– May 2025

- Performed detailed analysis on large-scale pharmacy and claims datasets, identifying trends that helped reduce reporting inconsistencies and improve operational efficiency across multiple business units.
- Developed complex SQL queries and analytical models in Big Query to support executive dashboards, KPI reviews, and business reporting.
- Executed source-to-target data validation and reconciliation during migration to GCP, ensuring high accuracy and consistency across production systems.
- Translated business requirements into structured metrics, reporting templates, and scalable analytical datasets used by multiple teams
- Built automated data-quality checks, monitoring scripts, and daily validation reports that improved reporting reliability and reduced manual review efforts.

Data Specialist Engineer, IBM, USA

| Dec 2022– July 2023

- Supported data engineering and analytics initiatives using **Azure Databricks**, PySpark, and SQL-based transformations.
- Designed and deployed **ARIMA-based forecasting models** on Azure for product trend analysis, enhancing sales forecasting accuracy by **15%**.
- Collaborated with stakeholders to translate business needs into analytics requirements, improving report accuracy and business outcomes
- Contributed to analytical models for forecasting and recommendation logic as part of project enhancements (minor ML involvement)

Data Analyst Intern, Oracle, India

| March 2022– Sep 2022

- Worked with supply chain teams to define KPIs and develop **interactive dashboards** for performance monitoring.
- Built **time-series forecasting models (ARIMA)** to optimize inventory and reduce stockouts, saving **\$9K/month** in compute costs.
- Automated ETL pipelines using **SQL Server** and **Python**, processing 30+ GB of data monthly and improving efficiency by **20%**.
- Supported development of simple predictive analytics components to improve inventory accuracy and stock availability.

PROJECTS & CERTIFICATIONS:

- Python for Data Science [link](#) • AI-Powered Graph Tuning System • AI-Driven KPI Benchmarking & Anomaly Detection
