

SATYAVARSHINI GOLLAPUDI

Software Developer

+1 404 491 0287

satyavarshini.gollapudi@gmail.com

Professional Summary

- Around **5 years** of extensive IT experience as a **Java Developer** in developing, design, analysis, testing of various web based, **SOA** based and client/server applications in multi-platform environments with **JAVA/J2EE** technologies.
- Experienced in using **Agile Methodology** including creating product/sprint catalogues, active participation in **Scrum**, **Sprint planning** and **exit meetings**.
- Expertise in using **Agile Software Development** methodologies like **Scrum**, **Sprint** and **Traditional software** models like **Waterfall** and **Test-Driven Development (TDD)**.
- Expert in **Core Java** with strong understanding of **OOPS Concepts**, **Collections**, **Multithreading**, **Thread Pool**, **Executor Services**, **Event handling** and **Exception handling**.
- Experience in migrating from **Java 1.7** to **Java 1.8** and implementing new features of **Java 8** like **Java Streams API**, **Functional Interfaces** and **Lambda Expressions**.
- Expert level skills in application development using **Java**, **J2EE**, **Spring Framework**, **Hibernate**, **JSP**, **JPA**, **Servlets**, **JDBC**, **HTML**, **JavaScript**, **Angular**, **J2EE** compliant application servers, **OOAD** concepts, client/server, design patterns of **J2EE** architecture.
- Experience in GoLang concepts like Slices, Maps, Structs, Interfaces, Go routines and Channels and extensive working knowledge with Microservices, Gokit, ORM GORM, cli, Gorilla Mux, go - hystrix, godoc.
- Design, develop, analyze, test, and debug **C#** programs for Windows desktop applications using WinForms and WPF.
- Successfully migrated complex legacy systems to modern **.NET** framework.
- Experience in configuring and deploying the web applications on **WebLogic**, **WebSphere** and **JBoss Application Servers** including hands on experience in using **Tomcat web Server**.
- Expert level knowledge in using spring modules like **Spring Core**, **Spring DAO**, **Spring MVC**, **Spring AOP**, **Spring IOC**, **Spring JDBC**, **Spring Security** and **Spring data JPA**.
- Experience in integrating the internal security model into new projects with **Spring Microservices** and **Spring Boot**.
- Extensive experience on developing web applications using **Spring Boot**, **Spring Security**, **Spring Core**, **Spring MVC**, **Spring ORM**, **Spring JPA** and **Spring Rest**.
- Expertise in databases such as **Oracle**, **MySQL**, **PostgreSQL** manage tables, views, indexes, sequences, stored procedures, functions, triggers, and cursors.
- Experience in developing web applications using **Java 17**, **J2EE**, **Servlets2.1**, **JSP**, **Spring4.0/5.0**, **Angular JS**, **Struts**, **Hibernate**, **EJB**, **JMS**, **JDBC**, **JAVAX-WS**, **HTML**, **CSS**, **ReactJS**.
- Successfully delivered enterprise-level applications using **.NET Framework 2.0-4.5**.
- Experience on **NoSQL** databases like **MongoDB**, **Cassandra**, and **Elastic search**.
- Created high throughput messaging processing system development using **Kafka**.
- Explored **Spark**, **Kafka**, and **Storm** along with other open-source projects to create a real-time analytics framework.
- Experience in integration tools like **Spring Integration**, **Apache CXF**, **Apache Kafka** and **Apache Camel** to integrate the enterprise application technologies with existing **JVM** environment.
- Experience in handling messaging services using **Apache Kafka**, **Kafka event sourcing**.
- Experienced in moving data from different sources using **Kafka Producers**, **Consumers** and preprocess data using **Storm** topologies.

- Re-designed, re-architected and built the existing application using **Java 11, Spring Boot, Spring Reactive Stack (WebFlux), GCP, PostgreSQL and Maven.**

TECHNICAL SKILLS:

Languages	Java 1.7, 1.8, JavaScript, PL/SQL, UNIX Shell Script
Frameworks	Spring, Hibernate, Spring Boot, Spring Security, Spring AOP, Spring Core, JSF.
Databases	Oracle, MYSQL, PostgreSQL, Mongo DB, Cassandra, Elastic Search
Web Services	REST (JAX-RS), SOAP(JAX-WS)
Web/Application Servers	Apache Tomcat, IBM WebSphere, Oracle WebLogic, WebSphere, JBoss
Web Technologies	JavaScript, HTML, React, Bootstrap, CSS, Angular
Design Patterns	MVC, Front Controller, Session Façade, Singleton, Business Delegate and DAO patterns
AWS Components	EC2, S3, IAM, ELB (Elastic Load Balancers), RDS, VPC, Route53, Cloud Watch, Cloud Formation.
Messaging	RabbitMQ, Apache Kafka
Logging/Monitoring tools	Elasticsearch, Logstash, Kibana
Container Technologies	Docker, Kubernetes, OpenShift
Operating Systems	Windows, UNIX, LINUX
Testing Tools	Junit, Mockito, Selenium
Version Control	GIT, Bitbucket, SVN
Methodologies	Agile Methodology, JIRA, Waterfall
Development Tools (IDEs)	IntelliJ, Eclipse IDE, NetBeans
Build Tools	Maven, Jenkins, Gradle, Google cloud Platform (GCP), Azure
CI/CD	Harness

EXPERIENCE

Client: FCCI Insurance Group
Duluth, GA
Position: Sr. Software Developer

June 2024 – Present

Responsibilities:

- Responsible for Building and Redesigning of the Client's Partnership Application.
- Used Java 17 to build the application in IntelliJ/VS Code and Gradle as the build tool.
- Build robust backend services using Java 17 and Spring Boot.
- Used **Angular 11** reactive forms to implement complex forms and performed the validations using Form Builder.
- Designed Frontend with in using object oriented **Angular 11** Framework and implemented various phases of Responsive Design as per the requirement.
- Used **Go** Programming Language (**Golang**) and Scala in the development of the application.
- Developed backup and recovery engine for VM backup/recovery using VMware vSphere APIs, **Golang** programming language and RabbitMQ Message bus (communication interface).
- Experience writing data APIs and multi-server applications to meet product needs using **Golang**.
- Developed and maintained **cross-platform applications** using **C++** and Qt for **Windows** and **Linux** environments.
- Integrated **C++ modules** with **RESTful APIs** to enable efficient communication between front-end and back-end services.
- Built **cron jobs** and scheduled tasks using **Shell** to automate routine system maintenance (e.g., backups, log rotation, updates).
- Integrated **Python** with **AWS Boto3** to automate the creation, deletion, and management of EC2 instances, S3 buckets, and RDS databases.
- Managed **system logs** using **Perl** scripts for parsing, analyzing, and generating actionable insights from server log files.
- Played key role in converting **standalone** projects into **Maven** projects.
- Experience working on Microservices, Spring boot technologies.
- Involved in the migration of traditional services to **microservices**.
- Involved in **Continuous Integration** and deployment of applications on **Docker using Jenkins**.
- CI/CD using Chef and other tools like **GitHub**, **Jenkins**, and **AWS/Open Stack**.
- Used combination of **REST** and **Apache Kafka** message brokers to produce and consume centralized spring **Restful** web services in **JSON** format.
- Wrote **Kafka** producers to stream the data from external rest **APIs** to **Kafka** topics.
- Used **Spring Kafka API** calls to process the messages smoothly on **Kafka Cluster** setup.
- Configured **Kafka** to read and write messages from external programs.
- Used Micro services architecture with Spring Boot based services interacting through a combination of **REST** and **Apache Kafka message brokers**.
- Architecting and implementing robust cloud solutions on **Azure Cloud**, leveraging services such as **Azure Functions**, **Azure Logic Apps**, and **Azure Service Bus** for building event-driven applications.
- Having good knowledge of different databases, **Node JS** like **Postgre SQL**, **MySQL**, **DB2**, **GraphQL**, **Oracle**, **Spark**, **Microsoft SQL Server**, **NoSQL DB (Raven DB, Mongo DB and Cassandra, Couch DB, Radis)**.
- Expertise with web services and **SOA** (Service Oriented Architecture) related standards such as **REST API**, **Jersey API** and **J2EE** Web Services based on **SOAP**, **WSDL**, **UDDI**, **JAX-WS**, **JAXB**, **Hadoop**, **Hive Spark** with **Jackson API**.
- Utilizing Kafka for publish-subscribe messaging as a distributed Golang commit log, with experience in creating scalable and efficient backend services, including user-defined exception classes using Java and building SOAP and REST APIs.
- Developed cucumber ATDD/unit test cases for the REST APIs.
- Responsible for managing and maintaining the project's **AWS infrastructure** up to date.
- Used **RESTful** web services to expose certain functionalities of the application.
- Developing scripts for build, deployment, maintenance, related tasks using Jenkins, Docker, and Maven.
- Developed unit testing using **Junit**, **Mockito**.
- Managed cloud resources on **Azure**. Tested APIs using **Postman** and managed project tasks using **Jira**.
- Configuring **Java 17** objects with backend database tables Golang using **ORM** mapping in **Hibernate** end to end application on **Spring Boot** framework (**Rest Api** Application/**Spring JP** Using Crud repository).

- Designed and developed web applications using **ASP.NET, HTML, VB, CSS, and LINQ.**
- Implemented business logic using **C#, .NET** and business objects.
- Worked with user controls and **ASP.NET** controls in **.NET 3.5.**
- Used log4j to capture the log that includes runtime exceptions and debug.
- Experience in creating clusters using Kubernetes, creating pods, replicating controllers, deployments, health checks and ingress by writing YAML files.
- Worked on developing **API's** in **GCP** for **DataPrep** jobs.
- Experience in the developing Front-end web applications using HTML4/5, CSS3, JavaScript, Angular 14, jQuery, JSF, **ReactJS, NodeJS**, AJAX, JSON, XHTML and XML.
- Developed test cases both for the UI side as well as the backend and performed Regression testing, Integration testing, Back-end Testing.

Environment: Java/J2EE, JDK 11, Java 11, AWS (ECS, EC2, Route53, VPC EMR, CloudWatch, S3, IAM) SOAP/REST Web Service, Spring Boot microservices, MapReduce, SOAP, HTML5, Postman, TypeScript, Kibana, Jenkins, JUNIT, Mockito, PL/SQL developer.

Client: British American Tobacco
Columbia, KY
Position: Software Developer

May 2023 – April 2024

- Involved in requirement gathering and technical design meetings.
- Involved in Daily Stand-Up Meetings, Sprint Planning and Backlog Grooming for **Agile Scrum** Process.
- Involved in preparing the Documentation of the project to understand the system efficiently.
- Developed **high-performance C++ applications** that supported millions of real-time data entries for **financial systems.**
- Collaborated with a team of developers to implement new features and resolve **bug reports** in **C++** and CMake.
- Implemented **high-performance algorithms** in **C++** for real-time data analysis, reducing execution time by **Y%.**
- Developed **Shell scripts** for automating **system monitoring** tasks (disk space, memory usage, CPU load), alerting the team when thresholds are exceeded.
- Wrote **Python scripts** to automate server setup, deployment, and configuration of **cloud instances** in **AWS**, reducing provisioning time by **X%.**
- Developed User Interface application modules using **HTML5, CSS3 and JavaScript, JSON, jQuery and AJAX.**
- Worked with advanced **MVC framework** such as **Spring-IOC, AOP (Aspect Oriented Programming), MVC** and Batch which is used for implementing backend functionality.
- Implemented **Spring MVC, dependency Injection (DI) and aspect-oriented programming (AOP) features along with hibernate.**
- Using Design Patterns such as **Singleton, Session Façade, Data Access Object and Data Transfer Object** for the application development.
- Developed and tested the **Web Services** using the **REST client** with **POSTMAN.**
- Implemented the Spring Restful Template to retrieve the data from the other system using **JSON.**
- Responsible for creating and maintaining architecture for **Restful API using Spring Boot.**
- Used **Cassandra** to store claims data to do data analysis.
- Closely worked with **Kafka** Admin team to setup **Kafka** cluster setup on the QA and production environments.
- Used **Spring Kafka API** calls to process the messages smoothly on **Kafka** Cluster setup.
- Install and configure the **RabbitMQ** environment for the Analytics and setup the supervisor for managing process availability.
- Worked on deploying the applications in **AWS** as **EC2** instances and create snapshots for the **EBS** volumes.
- Worked on Restful web services which enforced a stateless client server and support **JSON (few changes from SOAP to RESTFUL Technology)** Involved in detailed analysis based on the documents.
- Used **AWS SDK** for connection to **Amazon S3** buckets as it is used as the object storage service to store and retrieve the media files related to the application.

- Developed and optimized data processing pipelines using **Apache Spark** on **AWS**, handling large-scale data transformations and analysis.
- Developed single page applications using **React Redux** architecture, **ES6**, web pack and grunt. Further, implemented various phases of Responsive Design as per the requirement.
- Design, build and manage the **ELK (Elasticsearch, Logstash, and Kibana)** cluster for centralized logging and search functionalities for the App.
- Worked in container-based technologies like **Docker** and **Kubernetes**.
- Written **Docker** files for micro services, also Dockerized testing environment for those devices.
- Used **Jenkins** pipelines to drive all micro services builds out to the **Docker** registry and then deployed it to the Kubernetes, created pods and managed using Kubernetes.
- Managing the **OpenShift** cluster that includes scaling up and down nodes.
- Deployed **TDD** through Unit and Integration using **Junit and Mockito**.
- Used **Gradle** for building and added lot of external dependencies.
- Used **Jenkins, GitLab and Jira** products for continuous integration.
- Deep understanding of **React.js** for designing UI.
- Used **React Observables** to use custom components for data manipulations and to display data in company standard format.
- Integrated **Log4j** framework into the Application.

Environment: Java, JDK 1.8, Spring 4.x, Hibernate 4.x, Core Java, Java 8, Collections, Exception Handling, HTML, CSS, JSP, JavaScript, Linux, shell script, JIRA, J2EE, Spring MVC, Spring Boot, RESTful Micro services, JSON, Tomcat, Oracle DB, SQL, AWS (EC2, S3, RDS, IAM), Kafka, Docker, Kubernetes, Harness, Junit, Mockito, POSTMAN, Maven, Apache Tomcat 8.x, JavaScript, Angular, GitLab, IntelliJ and Agile Methodology.

Client: Cognizant Technology Solutions(CTS)

Hyderabad, Telangana

August 2020 – October 2022

Position: Java Programmer

- Performed validation for client side and server side with the help of Struts Validation Framework.
- Used **ORM technology such as Hibernate to provide an object model for the data in database for ease of access.**
- Configured and used **JBoss** application server for creating Data source and enabling **JNDI** for beans and database lookups.
- Used **Oracle** platforms to create databases of student and faculty login information and their desired areas of study.
- Used **Eclipse** and **Net Beans** as **IDE** tools to build up applications.
- Used Struts framework to implement the **MVC architecture** for most applications.
- Developed codes for **Action Servlet, Request Processor** and **Action Classes** by extending **Struts**.
- Used **EJB 3.0 Message Drive Beans** to initiate daily process.
- Followed the **Java** coding standards for scalability, reusability and ease of maintenance.
- **Created XML Schema, XML template and XSL.**
- Developed **Web Services Application using SOAP and WS-Security.**
- Developed and maintained elaborate services-based architecture utilizing open source technologies like **Hibernate ORM.**
- Deployed components on **J Boss and Web Sphere application server.**
- Designed banking web application by implementing the **Struts 1.2 framework for Model View Controller pattern.**
- Understand system requirements for the application and preparing technical special cations, worked with the team to review the requirements, and went through the Software Requirement Special cation document and Architecture document.
- Redesigned the application modules using **Spring Boot Rest API/Services, Spring, Spring-Data**, which resulted in 30% decrease in response time, 25% less code and 15% increase in revenue.

- Set up DEV QA and SIT environments.
- Maintained DEV, QA and SIT environments and closely worked with QA Team.
- Coordinated with QA team to identify ongoing issues and address the issues which are raised by QA.
- Developed application components using **Spring, Spring-Data, Spring Boot and Oracle.**
- Designed UML Use case diagrams, Class diagrams, and Sequence diagrams using **Star UML.**
- Used various Core Java concepts such as **Exception Handling, Collection APIs** and **Executer Service Framework** to implement various features and enhancements.

Environment: Java 1.8, Spring, Spring Boot, Restful Microservices, Spring Cloud, Spring Boot, OAuth2, MongoDB, RabbitMQ, Oracle DB, WebLogic 10.3, Docker, OpenShift, Eclipse IDE, UNIX, GIT, GITLAB, Jira, JUnit, POSTMAN, HTML, CSS3, JavaScript, ReactJS, Jenkins, Gradle.

○

Education

Master of Science: Technology Management, 04/2024 **Lindsey Wilson**

College - Columbia, KY

Bachelor of Technology: Information Technology, 06/2021

Gudlavalleru Engineering College - Gudlavalleru, India

CERTIFICATION:

AWS Certified Developer

Projects

Academic Project - 2021

- Covid 19 diagnosis and treatment using Artificial Intelligence and deep learning approaches.
- Successfully developed a web application which can take both CT scan and Chest X-ray image as input from user and performs analysis of image in the background using CNN technique and give result whether the person is covid positive or not.
- For this purpose, the system is trained and tested using deep learning algorithms such as Inception, ResNet, VGG and Xception.
