

SUMMARY

Results-driven Business Analyst with 4+ years of experience bridging business requirements and technical solutions through comprehensive data analysis, systems analysis, and process optimization across investment banking, healthcare, e-commerce, retail, and technology sectors. Technical expert in requirements gathering, business process modeling, data analytics, SQL, Python, Tableau, and system design with proven track record of improving operational efficiency by 40% and reducing process cycle time by 60% while delivering data-driven insights that increase revenue and drive digital transformation initiatives. Skilled in translating complex business needs into functional specifications, system requirements, and analytical solutions that enable stakeholders to make informed decisions supporting strategic planning, process improvement, and technology implementations. Adept at collaborating across business users, technical teams, and executive leadership to deliver enterprise-scale solutions that solve critical business challenges, optimize workflows, and enhance customer experience in dynamic financial markets and technology environments.

EDUCATION

Master’s degree in Information Technology | Central Michigan University, MI - USA
Bachelor’s degree in Electronics & communication engineering | KL University - India

EXPERIENCE

Business Analyst | Piper Sandler, MI - USA

OCT 2024 – PRESENT

Description: Piper Sandler is a leading investment bank providing investment banking, institutional sales, trading, and research services. I am responsible for analyzing business processes, gathering requirements for trading systems and research platforms, performing data analysis for investment decisions, and bridging business needs with technical solutions across equity research, fixed income, and investment banking divisions.

- Conducted comprehensive business analysis and requirements gathering for trading platform modernization and research system upgrades serving 500+ investment professionals, creating detailed business requirements documents (BRD), functional specifications, and user stories that supported \$5M+ technology investments and improved system performance by 45%.
- Performed advanced data analysis and financial modeling using SQL, Python, R, and Excel to support investment banking transactions, equity research, and trading operations, analyzing \$3B+ in deal flow and market data to provide critical insights for M&A valuations, IPO pricing, and investment recommendations with 95% accuracy.
- Developed interactive business intelligence dashboards and executive reports using Tableau, Power BI, and advanced Excel modeling for senior management and client presentations, creating real-time analytics for portfolio performance, market trends, and operational KPIs that enhanced decision-making and supported \$2B+ in client asset management.
- Led cross-functional collaboration between trading desk, research analysts, technology teams, and compliance officers to identify process improvement opportunities and system integration requirements, implementing workflow optimizations and automated reporting solutions that reduced manual processing time by 60% and improved regulatory compliance.
- Designed and implemented data governance frameworks and quality assurance processes for financial data management, ensuring accuracy and compliance with SEC, FINRA, and internal risk management policies while maintaining zero data quality incidents across research publications and client deliverables.
- Facilitated stakeholder workshops and requirements sessions with portfolio managers, research directors, and trading personnel to define system functionality, process improvements, and reporting needs, translating complex business requirements into technical specifications that guided \$2M+ in system development initiatives.
- Performed gap analysis and process mapping for legacy system migration projects, documenting current state processes, identifying inefficiencies, and designing future state workflows that supported digital transformation initiatives and enhanced user experience across trading and research platforms.
- Created comprehensive testing strategies and user acceptance testing (UAT) plans for trading system implementations and data platform upgrades, coordinating with QA teams and end-users to ensure successful system deployments with 98% first-time success rate and minimal business disruption.

Environment: SQL Server, Python, Tableau, Power BI, Bloomberg Terminal, FactSet, Excel, JIRA, Confluence, Visio

Description: DataOne Solutions is a technology consulting company providing business analysis, systems integration, and data analytics solutions to enterprise clients across financial services, healthcare, e-commerce, retail, manufacturing, and telecommunications sectors. Here, I was mainly responsible for business process analysis, system requirements gathering, data analysis, and delivering technology solutions that optimize operations and drive business value.

- Analyzed complex business processes and gathered requirements for 40+ enterprise system implementations spanning financial services (core banking systems), healthcare (EHR implementations), e-commerce (inventory management platforms), retail (POS systems), and manufacturing (ERP integrations), creating comprehensive BRDs, FRDs, and technical specifications that guided \$10M+ in technology investments
- Performed extensive data analysis and business intelligence using SQL, Python, Tableau, and Power BI for diverse client projects including banking (risk analytics), healthcare (patient outcomes analysis), e-commerce (customer behavior modeling), and retail (sales forecasting), delivering actionable insights that improved client operational efficiency by 35% and reduced costs by \$5M+ annually
- Designed and implemented end-to-end business solutions and system integrations using APIs, web services, and ETL processes for clients across industries, facilitating data flow between CRM systems (Salesforce), ERP platforms (SAP, Oracle), and business intelligence tools while ensuring data integrity and system performance optimization
- Conducted thorough gap analysis and process improvement initiatives using Lean Six Sigma methodologies for banking operations (loan processing), healthcare workflows (patient scheduling), e-commerce operations (order fulfillment), and retail processes (inventory management), identifying inefficiencies and implementing solutions that reduced process cycle time by 50% across client organizations
- Facilitated stakeholder workshops and requirements elicitation sessions with business users, IT teams, and executive leadership across multiple industries, translating complex business needs into functional specifications and system requirements while managing competing priorities and ensuring alignment with organizational objectives and regulatory compliance standards
- Developed comprehensive test strategies and quality assurance processes for system implementations including UAT planning, test case development, defect tracking, and performance validation, coordinating testing activities across functional teams and ensuring successful system deployments with 95% user acceptance rates
- Created detailed process documentation and user training materials for enterprise system implementations, including user manuals, process flow diagrams, and training curricula that supported change management initiatives and ensured smooth technology adoption across client organizations with 90% user proficiency rates
- Collaborated with cross-functional teams including data engineers, software developers, project managers, and client stakeholders to ensure seamless project delivery and knowledge transfer, implementing agile methodologies and project management best practices that improved delivery timelines by 30% and enhanced client satisfaction scores

Environment: SQL Server, Python, Tableau, Power BI, Salesforce, SAP, Oracle, JIRA, Confluence, Visio, Excel, SharePoint

SKILLS

- **Business Analysis:** Requirements Gathering, Business Process Modeling, Gap Analysis, Use Case Development, User Story Creation, Acceptance Criteria
- **Systems Analysis:** System Design, Technical Requirements, Functional Specifications, Process Flow Diagrams, Data Flow Diagrams, UML Modeling
- **Data Analysis:** SQL, Python, R, Excel, Statistical Analysis, Data Mining, Predictive Analytics, A/B Testing, Hypothesis Testing
- **Data Visualization:** Tableau, Power BI, QlikView, Looker, Google Data Studio, Excel Dashboards, Matplotlib, Seaborn, D3.js
- **Database Systems:** MySQL, PostgreSQL, SQL Server, Oracle, MongoDB, Snowflake, Redshift, BigQuery, Data Warehousing, ETL
- **Business Intelligence:** OLAP, Data Modeling, KPI Development, Metrics Analysis, Performance Analytics, Reporting, Dashboard Design
- **Process Improvement:** Lean Six Sigma, Process Mapping, Workflow Optimization, Change Management, Business Process Reengineering
- **Project Management:** Agile, Scrum, Waterfall, JIRA, Confluence, MS Project, Stakeholder Management, Risk Assessment, Budget Planning
- **Documentation:** Business Requirements Documents (BRD), Functional Requirements Documents (FRD), Technical Specifications, User Manuals
- **Financial Analysis:** Investment Analysis, Financial Modeling, Cost-Benefit Analysis, ROI Analysis, Budget Forecasting, P&L Analysis

- **Technology Platforms:** Salesforce, SAP, Oracle ERP, Microsoft Dynamics, ServiceNow, SharePoint, APIs, Web Services, Cloud Platforms
- **Quality Assurance:** UAT Planning, Test Case Development, Defect Tracking, Quality Metrics, Process Validation, Compliance Testing
- **Industry Expertise:** Financial Services, Investment Banking, Healthcare, E-commerce, Retail, Manufacturing, Telecommunications
- **Communication:** Stakeholder Management, Presentation Skills, Workshop Facilitation, Training Development, Client Relationship Management
