

Gowtham Chandan Raju

Business & Data Analyst

gowthamchandanraju@gmail.com | +1(551) 233-9689 | [Linkedin](#)

Professional Summary

Data Analyst with over 2 years of experience delivering analytical insights and business intelligence solutions in healthcare, finance, and operations. Currently working with Velor Pathways, supporting Premier Health as a contract Data Analyst. Skilled in SQL, Excel, Power BI, Python, and R for data cleaning, analysis, and visualization. Experienced in building dashboards, performing statistical analysis, and identifying key trends to support data-driven decisions. Strong collaborator with business and technical teams to improve reporting accuracy, automate manual processes, and enhance operational efficiency.

Core Skills

- **Statistical & Data Analysis:** Forecasting, trend analysis, regression, KPI benchmarking
- **Data Tools** SQL (advanced), Python (pandas, NumPy, matplotlib), R (basic), Excel (advanced formulas, macros, pivot tables), Alteryx (Foundational), Power BI
- **Data Management:** ETL, pipeline automation, data cleaning & modeling, governance, metadata cataloging
- **Reporting:** Power BI dashboards, KPI tracking, data storytelling, executive reporting

Experience

Velor Pathways (Client: Premier Health) | USA

Data Analyst – Contract Role | Feb 2025 – Oct 2025

Project 1: Clinical KPI Modernization using Power BI & Azure SQL

- **Challenge:** The client's clinical reporting relied on outdated Excel sheets with inconsistent KPI definitions across departments, delaying performance reviews and compliance submissions.
- **Approach:** Partnered with clinicians and finance stakeholders to identify 20+ critical KPIs, standardize definitions, and design a centralized reporting data model in Azure SQL.
- **Technical Execution:** Developed SQL views and DAX measures for KPI calculations; automated ingestion pipelines in Snowflake; built Power BI dashboards with drill-downs for patient utilization and operational costs.
- **Impact:** Reduced monthly reporting turnaround time by 60% and increased KPI reliability across 200+ end users.

Project 2: Claims Cost Optimization via Databricks & Spark MLlib

- **Challenge:** Large claims datasets (70M+ rows) had inconsistent structures, making trend analysis and cost predictions unreliable.
- **Approach:** Collaborated with the Azure Databricks engineering team to refactor data pipelines and implement predictive modeling for claims cost patterns.
- **Technical Execution:** Used PySpark, SQL, and MLlib regression models to analyze claims trends, optimizing data joins and reducing processing runtime by 35%.
- **Impact:** Identified key cost drivers and provided insights that informed provider contract negotiations, improving operational efficiency and cost savings.

Additional Contributions:

- Implemented Power BI Copilot for self-service analytics, cutting ad-hoc report requests by 25%.
- Led documentation and metadata cataloging for regulatory KPI compliance reporting.

Velor Pathways | USA

Volunteer Data Analyst Intern | May 2024 – Feb 2025

Project: Internal Analytics Automation & Data Quality Dashboard

- **Challenge:** The internal BI team faced inconsistencies in data validation for recurring Power BI dashboards, leading to rework and manual verification.
- **Approach:** Proposed and built a data quality monitoring framework to automatically validate key business metrics before publishing dashboards.
- **Technical Execution:** Used SQL and Python (pandas) for anomaly detection and null-check logic; integrated validation output into a Power BI “Data Quality Scorecard.”
- **Impact:** Improved dashboard reliability and reduced manual validation time by 40%, setting the foundation for automated QA in analytics.

Hexaware Technologies | India

Data Analyst Intern | Jan 2022 – Jun 2022

Project: Workforce and Finance Analytics Dashboard

- **Challenge:** Leadership lacked a unified view of workforce cost trends across departments.
- **Approach:** Partnered with HR and finance teams to identify key KPIs and design a multi-source reporting structure.
- **Technical Execution:** Cleaned and merged HRIS and financial datasets using Python (pandas) and SQL, then visualized workforce cost distribution through Tableau and Power BI dashboards.
- **Impact:** Delivered a unified, interactive dashboard used for quarterly resource planning and budgeting decisions.

Publications & Thought Leadership

- **Employee Diversity and Compensation Dashboard (Power BI)** - Designed an interactive dashboard analyzing anonymized HR data to uncover diversity, equity, and compensation trends, supporting DEI-focused decision-making. [\[Link\]](#)
- **Mastering Data Complexity with Power Query (Excel)** – Streamlined a 3,864-record e-commerce dataset by splitting it into four relational sub-tables, enhancing data manageability and analytical efficiency. [\[Link\]](#)
- **Data Analytics with SQL** – Developed a portfolio of SQL projects showcasing database creation, data cleaning, advanced querying, and report generation to drive actionable business insights. [\[Link\]](#)

Education

Master of Science in Data Science – Statistical Track

New Jersey Institute of Technology, Newark, NJ

Certifications

- Alteryx Foundational Micro-Credential
- AWS Data Engineer – Foundations
- SQL – Intermediate & Advanced (HackerRank, TestDome – Top 10%)
- Data Engineering with Python & SQL – DataCamp

Technical Highlights

- High proficiency in Excel, including pivot tables, nested formulas, and automation via macros.
- Experience using SQL and Python to compile and compute statistics for business analysis.
- Built dashboards and reports using Power BI for cross-functional stakeholders.
