

SINDHU MITTA

JAVA DEVELOPER

Location: TX | Phone: 469-588-4517 | Email: mittasindhu22@gmail.com

SUMMARY

- With over 3 years of experience, developed and maintained Java applications, leveraging Java features and best practices to deliver efficient and scalable solutions.
- Proficiently managed and optimized MySQL databases, ensuring efficient data storage, retrieval, and security for various applications.
- Effectively utilized MongoDB for scalable, high-performance applications, focusing on document-oriented data modeling and real-time analytics.
- Exhibited proficiency in creating and managing PostgreSQL databases, focusing on advanced functionalities including indexing, triggers, and stored procedures.
- Skillfully administered Oracle databases, ensuring data integrity, performance tuning, and implementing backup and recovery strategies.
- Proficient in crafting responsive and interactive web applications using HTML5, CSS3, and JavaScript, ensuring cross-browser compatibility and optimal user experience.
- Demonstrated expertise in developing scalable and efficient backend services with Spring Boot, implementing RESTful APIs, and integrating with frontend technologies for seamless application functionality.
- Skilled in building dynamic single-page applications (SPAs) using React.js, leveraging its component-based architecture to create reusable UI elements and manage application state effectively.
- Experienced in developing robust and maintainable web applications using Angular, implementing two-way data binding, dependency injection, and modularization to enhance application performance.
- Extensive experience in building web applications using frameworks like Spring Boot, React.js, Angular, and Node.js, ensuring a seamless user experience.
- Skilled Java Developer proficient in Hibernate and Maven, leveraging Hibernate's ORM capabilities for streamlined database interactions and Maven for efficient project management and dependency handling.
- Competent in creating and utilizing web services to provide smooth integration and skilled in using Jakarta EE to create scalable, enterprise-grade systems.
- Familiar with AWS services for application deployment, monitoring, and scaling, ensuring high availability and reliability of cloud-based applications.
- Proficient in JDBC for database connectivity, JavaBeans for data encapsulation, and servlets for dynamic web content generation.
- Experienced in Agile and Scrum environments, participating in sprint planning, daily stand-ups, and sprint reviews to deliver high-quality software.
- Competent in software development and information technology, leveraging expertise to design, implement, and maintain cutting-edge solutions that drive organizational success.
- Skilled in using Git and GitHub for managing codebase, ensuring version control and collaboration among team members.
- Familiar with Docker for containerization, which enables effective application deployment and scalability across a variety of environments, and experienced in setting up and maintaining Jenkins for automated build and deployment procedures.

TECHNICAL SKILLS

Programming Languages:	Python, Java, C, SQL.
Databases:	MySQL, MongoDB, PostgreSQL, Oracle.
Web Technologies:	HTML5, CSS3, JavaScript, Spring Boot
Frameworks & Libraries:	React JS, Angular, Node JS, .Net, Microservices, Hibernate, Maven, Web Services, Jakarta EE, Spring, Spring Boot, Spring MVC, Spring Security, Rest API, Hibernate,
Cloud Technologies:	AWS
J2EE Technologies	JDBC, Javabeans, Servlets, JPA, JSP
Methodologies:	Agile, Scrum, Waterfall.
Version Controls:	Git, GitHub
CI/CD:	Jenkins, Docker.
Operating Tools:	Windows, Linux.

EDUCATION

Master's in Information Systems	Aug 2021 - May 2023
University of Texas at Arlington, Texas	
Bachelor's in Computer Science	Aug 2016 - May 2020
Jawaharlal Nehru Technological University, India	

PROFESSIONAL EXPERIENCE

Java Developer Robosoft Technologies, TX	Aug 2023- Current
• Designed and implemented complex Java applications using object-oriented programming principles to enhance system functionality and user experience. • Developed and optimized SQL queries, stored procedures, and functions for relational databases such as Oracle and PostgreSQL, ensuring efficient data manipulation and retrieval. • Created dynamic and responsive web pages using HTML5 and CSS3, ensuring cross-browser compatibility and optimal user experience. • Employed JavaScript to create interactive web applications, implementing features such as form validation, DOM manipulation, and AJAX requests. • Utilized Spring Boot to develop and deploy microservices-based applications, streamlining configuration and reducing development time. • Configured Hibernate session factory to integrate Hibernate with spring and used JPA/Hibernate to communicate with data layer and XML to read XML data. • Implemented dynamic and interactive web applications using React.js for seamless user experiences.	

- Worked on Jakarta EE components to develop scalable and enterprise-level applications, ensuring adherence to best practices and design patterns.
- Utilized Amazon RDS for managing relational databases in Java applications, ensuring high availability and automatic backups.
- Implemented AWS Code Pipeline and Code Build for continuous integration and delivery (CI/CD) of Java applications, streamlining the development process.
- Leveraged Amazon S3 for storing and serving static assets of Java web applications, enhancing performance and reliability.
- Designed and implemented reusable JavaBeans components to encapsulate business logic and data for various modules of the application.
- Configured and maintained Jenkins pipelines for continuous integration (CI) and continuous delivery (CD) of Java-based applications, enhancing automation and reducing deployment times.
- Contributed to Agile environments, participating in daily stand-ups, sprint planning, and retrospective meetings to ensure continuous improvement.
- Utilized GitHub for version controlling and managing code repositories, collaborating on code reviews, and integrating changes through pull requests.

Java Developer Intern Epsilon, TX

Jan 2023- Jun 2023

- Designed and built a comprehensive e-commerce platform using Java, focusing on server-side logic to process client requests and generate responses.
- Employed Java servlets as the core technology for handling HTTP requests (such as GET, POST) and generating dynamic web content in response, ensuring efficient server-client communication.
- Established a connection between the Java application and MySQL database using JDBC (Java Database Connectivity) for data persistence.
- Designed database schema to store essential e-commerce data like product catalogs, customer information, and transaction records, ensuring data is organized and secure.
- Utilized HTML5 for structuring web content, CSS3 for styling and layout, and JavaScript for adding interactivity to web pages and ensured the e-commerce platform's user interface is visually appealing, user-friendly, and responsive across different devices and screen sizes.
- Leveraged the Spring Boot framework to simplify the development of RESTful APIs, facilitating data exchange in JSON or XML format between the server and clients.
- Participated in the implementation of Hibernate ORM for simplified database interactions and efficient data persistence.
- Designed endpoints for various e-commerce functionalities such as product listing, user authentication, and order processing.
- Adhered a Waterfall model's phase-by-phase schedule, which orders requirements analysis, design, implementation, testing, and deployment.
- Utilized Git as the version control system to manage code changes, track the development history, and collaborate effectively with other developers.
- Employed Docker to package the e-commerce application and its dependencies into containers, ensuring consistency across development, testing, and production environments.

Java Developer Trigent, India

Aug 2019-Jul 2021

- Developed interactive user interfaces using HTML and CSS, ensuring compliance with web standards and cross-browser compatibility.
- Utilized JavaScript to create dynamic web content and enhance user interactions, implementing features such as form validation and content toggling.
- Applied responsive design principles using CSS to ensure an optimal viewing experience across various devices and screen sizes.
- Implemented AJAX calls in JavaScript to enable asynchronous data exchange with the server, improving page load times and user experience.
- Designed and implemented user interfaces for web applications using React.js and Angular, enhancing interactivity and user engagement.
- Collaborated with team members to develop and consume web services using various protocols and standards, facilitating seamless integration with external systems.
- Contributed to the configuration and management of Maven for project build automation and dependency management, ensuring smooth development workflows.
- Integrated RESTful APIs using JavaScript frameworks like Axios to fetch and display data from the backend in real-time.
- Collaborated with backend developers to ensure seamless integration of SQL databases with the frontend, facilitating efficient data management.
- Integrated AWS Lambda functions with Java applications to automate tasks and process data, enhancing application efficiency and scalability.
- Employed AWS CloudFormation to automate the deployment of Java applications and infrastructure, ensuring consistent and repeatable environments.
- Developed a continuous integration and deployment pipeline using Jenkins and AWS Code Deploy, enabling automated testing and deployment of Java applications.
- Integrated MongoDB with Java applications to handle large volumes of unstructured data, improving data processing and retrieval efficiency.
- Utilized GitHub for version control, facilitating team collaboration and code management in a distributed development environment.

PROJECTS

To Go Web Application:

Togo is a website designed to deal with pickup or drop off packages while people are involved with work such as delivering Packages, Daily Essentials, etc. The task is assigned to the nearest Delivery Executive to save time. The app is divided into three modules based on the User types: Admin, Customer and Delivery Executive.

Object Detection in images

Worked on gathering requirements from multiple sources. Developed Python scripts, for image detection and tested them thoroughly. Used Python libraries such as Pandas, NumPy, and open CV library. Worked on TensorFlow framework for building a computational graph and executing symbolic differentiation.

Car Price Prediction

Developed an application to predict the price using numerical variable with techniques like Linear Regression and Regression Trees.

Pet store and Product Management.

Designed and developed online pet food and product delivery industry with using Database Management Systems.
