

Grishma Tandu

Austin, Texas - 78626 | +1 940 758 3618 | grishmatandu12@gmail.com | [linkedin.com/in/grishmatandu](https://www.linkedin.com/in/grishmatandu)

Education

Master of Science in Computer Science | University of North Texas - Denton, TX .

May 2024

Bachelors in Engineering (Electronics and Communication) | Osmania University - Hyderabad, India.

June 2021

Technical Skills:

Programming Languages	: Python, HTML, C#, COBOL, JCL, Mainframes, REXX, JAVA,R, C++
Database Technologies	: MySQL, IBM DB2, VSAM, GDG, PostgreSQL, JavaScript ,SQL
Operating Platforms	: Linux, Unix, Windows
Cloud Platforms	: Amazon Web Services (EC2, EKS,ECS,RDS, S3,CloudFront, Kinesis), Terraform, Docker
Version	: GIT, GitHub
Testing	: Selenium, Unit Testing & Performance Testing, Junit, Test automation
Deployment	: Deployment CI/CD Pipeline
Agile	: Agile SDLC , JIRA, Scrum Master
IDE	: Jupiter, Eclipse, PyCharm, Visual Studio Code
Ticketing Tools Expertise	: HPSM, ServiceNow. Autosys
Scripting	: Shell Script
Analytics	: Data Analysis, Tableau, AutoCAD, Power BI
Client Specific Tools	: Control-M, Stone branch, CA7/11, TSO/ISPW, SDSF, Batch and Console operations, IPL (Initial Program Load).

Certifications:

- | | |
|---|-----------------|
| ➤ Certified AWS Data Engineer – Associate
Credential ID: 182d4fb8110e4608a12c29fa470bcdd8 | Aug 2024 |
| ➤ Certified AWS Solutions Architect – Associate
Credential ID: 4ff827dd22a941d5b441e7658dd72f5e | Feb 2024 |
| ➤ Certified AWS Cloud Practitioner
Credential ID: be3f68ba85e74f4483e6d39b24e0cccd | Jan 2024 |
| ➤ Certified IBM Mainframe Application Programmer-IBM Development Environment
Fundamentals 2.4Mainframe Application Programmer-IBM Development Environment - Fundamentals 2.4 | Aug 2021 |
| ➤ Certified IBM Mainframe Specialist - IBM Mainframe Environment – Fundamentals | Aug 2021 |
| ➤ Certified IBM Mainframe Systems Programmer- Systems Programming - Fundamentals 2.4 | Aug 2021 |

Experience

Customer Relationship Manager– Jupiter Texas, Dallas, TX.

June 2023 – March 2024

- Acted as the primary contact for all online customer queries, delivering prompt and professional responses across various digital channels to ensure customer satisfaction and foster positive relationship wrt sales.
- Assisted Technology to support business needs and constraints. Combined a breadth of IT technical expertise with an overriding concern and urgency for excellent customer service. Working knowledge of personal computer and peripherals and experience in systems operations and maintenance
- Collaborated closely with the marketing team to ensure website content was consistently aligned with ongoing marketing campaigns and real estate listings, enhancing the coherence and impact of the company's online presence.
- Actively monitored statistics and resolved any technical issues or customer complaints related to the website promptly, ensuring minimal disruption to user experience and maintaining high standards of service quality.
- Working knowledge of Microsoft Office applications and Windows 7/10/365 and Windows 2003/2008/2012 Server.

Associate Professional Software Engineer (Technical Support) - DXC Technology, India

June 2021 – August 2022

- Account Management:** Strategized and managed key accounts like Aviva and Western Union, achieving a 15% increase in annual

revenue and 20% user retention improvement. Engaged with the various enterprise-wide IT projects and initiatives by understanding the detailed plans, drawings and creating weekly reports. Provided deskside training upon request for enterprise applications.

- **Comprehensive SDLC Involvement:** Engaged in all SDLC aspects, including requirement analysis, architectural design, and documentation of application specifications, along with developing detailed user stories and use cases.
- **Code and Workflow Optimization:** Conducted code analysis, UAT/QA testing, and debugging processes to ensure quality, and streamlined batch job processing with Autosys to improve job scheduling accuracy.
- **Incident Resolution and System Maintenance:** Resolved incidents and service requests per SLAs, performed system IPL maintenance, and monitored production environments for anomalies. Diagnosed s/y hardware, software and operator problems by providing advanced troubleshooting and complicated IT issues.
- **Cross-Functional Collaboration:** Collaborated with team members to identify and escalate issues, providing support and solutions to software applications, business and technology stakeholders.
- **Agile Project Planning:** Led project planning meetings, analyzed business requirements, and implemented deployment pipelines using Agile methodologies, enhancing project efficiency and reducing cycle time by 20%.
- Assisted the IT Support team with the inventory management. Worked with Systems Administrators in performing IT infrastructure processes and procedures assigned to the team.

Project Engineer Intern – AQAQ Technologies, Hyderabad, India.

May 2019 – May 2020

- Successfully Engineered and optimized a PCB with schematic capture layout, ensuring manufacturability; implemented various IoT circuit designs, such as automation water drip systems and microcontroller-based traffic control, reducing operational time by 50%.
- Designed and fabricated a PCB with schematic capture layout, ensuring optimal design and manufacturability; developed IoT circuit designs, including a temperature-controlled system and microcontroller-based traffic control system, enhancing efficiency by 40%.
- Utilized machine learning algorithms to optimize IoT solutions and datasets for better performance.
- Conducted experiments to test innovative solutions, improving overall product development.
- Developed prototypes and validated designs to ensure functionality and performance.
- Conducted extensive R&D to support project development and innovation.
- Provided documentation for design processes and project outcomes.

Project Engineer Intern –Spyry Technologies, Bangalore, India.

April 2018 – April 2019

- Assessed networks and systems for security using Nessus, Burp Suite, and Metasploit.
- Ensured robust security measures through product discovery and development processes.
- Resolved problems through systematic analysis and innovative solutions. Collaborated with cross-functional teams to improve system reliability and performance.
- Documented findings provided reports to stakeholders and ensured data integrity throughout the project lifecycle.

Academic Projects

iCARE Health System

August 2022 – December 2022

Software's used: Microsoft Visual Studio, MySQL

- Functional integration between Salesforce CRM and Electronic Health Records (EHR) systems, ensuring seamless data flow and interoperability.
- Customized user interfaces, dashboards, reports, and automation workflows tailored to the specific needs of healthcare providers and administrators.

Weather Forecast using Big Data

August 2023 – December 2023

Software's used: Python, Machine Learning algorithms, Scala, Cassandra.

- Application of big data analytics techniques to analyze historical weather patterns, identify trends, and develop predictive models for forecasting.
- Involved in implementation of a data acquisition system, a robust processing pipeline, a scalable data storage solution, interactive dashboards and reports, and the development of forecasting APIs for real-time access to weather forecasts and data, ensuring accuracy and consistency in the data.

Smart Retail Data Analytics

January 2024 – May 2024

Software's used: GCP, Apache Beam, Dataflow, Pyspark, Big Query, Terraform, GitLab CI/CD, TensorFlow, PyTorch, Tableau, Power BI

- Built a platform which leverages GCP to migrate and modernize existing data systems utilizing services such as GCS, Big Query and Kubernetes engine to build a robust data warehouse. This warehouse aggregates unstructured data from multiple retail sources, enabling real time analytics and business intelligence. Automation and Infrastructure as code with Terraform ensures efficient resource management and deployment while Apache Beam, Dataflow and Data Fusion facilitate seamless data integration and ETL processes, transforming data into actionable insights.
- Utilizing Python and Pyspark for data processing, the platform incorporates advanced data modeling and ML techniques to enhance predictive analytics.
